Dr. C.K. Vijayalakshmi
HOD – BME

ABOUT THE COLLEGE

Nandha Educational Trust was promoted by Thiru V.Shanmugan, chairman cum managing trustee in 1992 with a vision to serve and lead the society by imparting quality value based education as the mission. Nandha Engineering College was started in 2001 and is affiliated to the Anna University. The college is located in a serene atmosphere at a distance of 13 km from Erode. The college has state-of-the-art infrastructural facilities and offers 9 undergraduate, 6 postgraduate programmes in various disciplines of Engineering, Technology and Management with approved Research Centre for PhD programs.

ABOUT THE DEPARTMENT

Department of Biomedical Engineering was started in 2018 and is blooming out with wide spread opportunities, that come across and flourish with well-equipped Human Physiology and Biomedical Instrumentation Laboratories.

We have signed MoUs with many reputed industries, Hospitals and Technical chapters (like IEEE, ICS), University Technology PETRONAS, Malaysia under which our students are undergoing Research Internship Programme every year and also PALS which paved us the way to couple with HTIC MedTech Incubator, a multidisciplinary R&D facility working on healthcare technologies development.

We are always committed to shape the student as "industry ready" and replacement track records stand tall for us always.

SEMINAR REPORT

The Department of Biomedical Engineering Organized Seminar on “Advancements in Biomedical Instrumentation” on 16th July 2021. The speaker, Boopathi Sakthivel bestowed about the recent developments in Biomedical Instrumentation. He explained about the various radiology equipment such as Ultrasound equipment, Computed Tomography (CT) Scan machine, X – Ray machine, MRI and Endoscope use imaging techniques to see comprehensive view of body organs.

Also he spoke about their importance in detecting complications and abnormalities, leading to better patient care by medical professionals. Also he talked about robotic advances in biomedical field that might allow for telesurgeries to take place. This would essentially be where surgeons control robots from different medical facilities hundreds of miles away; the robots would mimic their precise movements via a high-speed internet connection. The session facilitated the participants to gain knowledge about the latest trends in biomedical instrumentation and its importance in the biomedical field.

WEBINAR REPORT

The Department Of Biomedical Engineering Organized Webinar on “Radiologic Technology” by Ms.Ghayathri Murugaboopathyraju, M.sc–Medical Physicist at Coimbatore Medical College on 17th September 2021. The Program exhibited Radiation Safety in Medicine - Why & How. She bestowed about Radiation, an energy that comes from a source and travels through some material or through space. Light and heat are types of radiation. The kind of radiation discussed on this site is called ionizing radiation because it has enough energy to remove an electron from an atom, making that atom an ion. In order to reach stability, these atoms give off, or emit, the excess energy or mass in the form of radiation. The two types of radiation are electromagnetic (like light) and particulate (i.e., mass given off with the energy of motion). Gamma radiation and X-rays are examples of electromagnetic radiation. Beta and alpha radiation are examples of particulate radiation. Ionizing radiation can also be produced by devices such as X-ray machines. Irradiation refers to exposure to radiation. Irradiation occurs when all or part of the body is exposed to radiation from a source. Irradiation does not make a person radioactive.

Radiology equipment such as Ultrasound equipment, Computed Tomography (CT) Scan machine, X – Ray machine, MRI and Endoscope use imaging techniques to see comprehensive view of body organs. Activities concerning establishment and utilisation of nuclear facilities and use of radioactive sources are carried out in India in accordance with the relevant provisions of the Atomic Energy Act, 1962. Health effects of radiation exposure may be grouped in two general categories: (i) Deterministic effects and (ii) Stochastic effects. The goal is to promote the benefits while advocating a regulatory structure that adequately protects the health and safety of patients, workers, and the public.

WEBINAR REPORT

The Department of Biomedical Engineering organized Webinar on Latest Trends in Artificial Organs and Implants on February 11, 2022.

Resource person – Dr. C. Sivamani, Associate Professor, KIT, Coimbatore gave a scintillating speech on “Latest Trends in Artificial Organs and Implants”. In her speech, she enlightened the participant’s minds with the need of artificial organs for cardiac assist devices, orthopedic devices, neuroprostheses and neurological support, urological support, visual support, blood cell and tissue replacement, and autoimmune and metabolic therapy treatments.

Also, she discussed about the research opportunities and its scope in the field of biomedical engineering.
