NANDHA ENGINEERING COLLEGE

(An Autonomous Institution affiliated to Anna University Chennai and approved by AICTE, New Delhi) Erode-638 052, Tamilnadu, India, Phone: 04294 – 225585

Curriculum and Syllabi

for

M.E – Engineering Design [R22]

[CHOICE BASED CREDIT SYSTEM]

(This Curriculum and Syllabi are applicable to Students admitted from the academic year (2022-23) onwards)

apop

AUGUST 2022

| INSTITUTE VISION AND MISSION | | | | | | | | | |
|------------------------------|---|--|--|--|--|--|--|--|--|
| VISION | • To be an Institute of excellence providing quality Engineering, Technology and Management education to meet the ever changing needs of the society. | | | | | | | | |
| | • To provide quality education to produce ethical and competent professionals with social Responsibility | | | | | | | | |
| MISSION | • To excel in the thrust areas of Engineering, Technology and Entrepreneurship by solving real- world problems. | | | | | | | | |
| | • To create a learner centric environment and improve continually to meet the changing global needs. | | | | | | | | |

| | M.E –ENGINEERING DESIGN |
|------------------------------------|---|
| VISION | • To be recognised as a centre of excellence in the field of Mechanical Engineering and to produce competent engineers with multi-disciplinary exposure to meet the changing needs of the society. |
| | • To enrich technical knowledge and skills by imparting quality education with ethics and social responsibility. |
| MISSION | • To empower the students in the thrust areas of Mechanical, Allied Engineering and Entrepreneurship in the continually changing global market. |
| | • To provide a conducive learning environment for improving continually to cater the needs of the society. |
| | The graduates of Mechanical Engineering will be |
| | PEOI: Core Competency: Graduates will have technical knowledge, skills and analytical ability to design, develop and test Mechanical or allied Engineering systems using modern tools. |
| EDUCATIONAL OBJECTIVES (PEO) | PEO2: Research, Innovation and Entrepreneurship: Graduates will have ability to take up real life and/or research related problems and to provide innovative solutions through comprehensive analysis and designing for a successful career in research or entrepreneurship. |
| | PEO3: Ethics, Human values and Life-long learning: The graduates will have ability to develop lifelong learning attitudes, ethics and values for a successful professional career. |
| | The students of Mechanical Engineering will be able to |
| | PSOI: An ability to identify, comprehend, formulate, design and analyse real life problems and develop Mechanical or allied Engineering systems/products/processes. |
| (PSO) | PSO2: An ability to implement appropriate design techniques, computer aided engineering tools for modeling, simulation and analysis. |

PROGRAM OUTCOMES:

At the end of a programme a students will be able to demonstrate ability to

| GRADUATE ATTRIBUTES | PO No. | PROGRAMME OUTCOMES |
|--|--------|---|
| Research Aptitude | POI | An ability to independently carry out research / investigation, identify problems and develop solutions to solve practical problems. |
| Technical Documentation | PO2 | An ability to write and present a substantial technical report / document. |
| Technical competence | PO3 | Student should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program. |
| Handle complex problems | PO4 | Use research based knowledge, method, appropriate techniques, resources and tools to solve complex engineering issues with an understanding of the limitations. |
| Environmental Sustainability and societal ethics | PO5 | Ensure development of socially relevant and eco-friendly indigenous products by applying technical knowledge, ethical principles and, sound engineering practices. |
| Life-long learning | PO6 | Recognize the need for independent, life-long learning and engage in the broadest context of technological change. |

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES WITH PROGRAMME OUTCOMES

A broad relation between the programme objective and the outcomes is given in the following table

| PROGRAMME | PROGRAMME OUTCOMES | | | | | | | | |
|---------------------------|--------------------|-----|-----|-----|-----|-----|--|--|--|
| EDUCATIONAL OBJECTIVES | POI | PO2 | PO3 | PO4 | PO5 | PO6 | | | |
| PEOI | 3 | 2 | 3 | 3 | 3 | I | | | |
| PEO2 | 3 | 2 | 3 | 3 | 3 | I | | | |
| PEO3 | 3 | 2 | 3 | 3 | 3 | I | | | |

Contribution

I: Reasonable

2: Significant

3: Strong

MAPPING OF PROGRAM SPECIFIC OUTCOMES WITH PROGRAMME OUTCOMES

A broad relation between the Program Specific Objectives and the outcomes is given in the following table

| | PROGRAMME OUTCOMES | | | | | | | | |
|----------|--------------------|-----|-----|-----|-----|-----|--|--|--|
| OUTCOMES | POI | PO2 | PO3 | PO4 | PO5 | PO6 | | | |
| PSOI | 3 | 3 | 2 | 3 | 2 | 2 | | | |
| PSO2 | 3 | 3 | 3 | 3 | 3 | 2 | | | |

Contribution

I: Reasonable

2: Significant

3: Strong

22EDA01 ADVANCED MATHEMATICS

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | - | - |

PRE REQUISITE :

| | Course Objectives | | Course Outcomes |
|-----|---|-----|--|
| 1.0 | Acquire knowledge of the random variable and moments & moments generating functions | 1.1 | The students will be able to infer expectation, variance, standard deviation moments and moment generating function for discrete and continuous random variables. |
| 2.0 | Aware the knowledge of calculus of variations. | 2.1 | The students will be able to solve problems involving functional, that occurs in various branches of engineering disciplines. |
| 3.0 | To understand the method of solving Laplace transform and Fourier transform. | 3.1 | The students will be able to apply Laplace and Fourier transforms to solve initial and boundary value problems in Partial Differential Equations. |
| 4.0 | Gain knowledge of solving ordinary differential equations. | 4.1 | The students will be able to solve ordinary differential equations using numerical methods. |
| 5.0 | Study numerical solution for solving partial differential equations | 5.1 | The students will be able to solve elliptic partial differential equations by using finite difference methods. |

| UNIT I : PROBABILITY AND RANDOM VARIABLES | (9) | | | | |
|---|---------------|--|--|--|--|
| Random variables: Probability mass function – Probability density function – Properties Moment generating functions. | - Moments – | | | | |
| UNIT II : CALCULUS OF VARIATIONS | (9) | | | | |
| Calculus Of Variations: Concept of variation and its properties – Euler's equation – Function | nal dependant | | | | |
| on first and higher order derivatives – Functional dependent on functions of several independent variables – Direct methods : Ritz and Kantorovich methods. | | | | | |
| UNIT III: TRANSFORM METHODS | (9) | | | | |
| Transform Methods: Laplace transform methods: Solution of one-dimensional wave equation - Solution of | | | | | |
| one- dimensional heat equation – Fourier transform methods: Solution of Diffusion equation | – Solution of | | | | |
| one-dimensional wave equation – Solution of Laplace equation. | | | | | |
| UNIT IV : NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS | (9) | | | | |
| Numerical solution of Ordinary differential equations: Runge - Kutta methods for syste | em of IVPs – | | | | |
| Numerical stability – Milne's method - Adams Bashforth multistep method – Shooting method | | | | | |
| UNIT V : NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS | (9) | | | | |
| Numerical Solution of Partial Differential Equations: Solution of one dimensional wave equati | on – Solution | | | | |
| of diffusion equation – Explicit and implicit methods – Solution of Elliptic equation: Solution of Laplace | | | | | |
| equation – Solution of Poisson equation. TOTAL (L:45) : 45 PERIODS | | | | | |

22EDA02 CONCEPTS OF ENGINEERING DESIGN

| | L | Т | Ρ | С |
|--------------------|---|---|---|---|
| | 3 | 0 | 0 | 3 |
| PREREQUISITE : NIL | | | | |

| | Course Objectives | Course Outcomes | | | | |
|-----|---|-----------------|--|--|--|--|
| 1.0 | To understand the fundamentals of design process for products | 1.1 | Apply the design concepts in various industrial products based on customer requirements. | | | |
| 2.0 | To impart the importance of design in today's context of global competition, environmental awareness and customer oriented market. | 2.1 | Utilize the statistical tools in monitoring the performance of products. | | | |
| 3.0 | To understand the various design methods of engineering design | 3.1 | Be familiar with the design concepts to improve the reliability and productivity. | | | |
| 4.0 | To understand the selection of proper materials | 4. I | Apply the material selection process and design for manufacture. | | | |
| 5.0 | To impart the basic concepts and various aspects of design using simple examples and case studies. | 5.1 | Gain knowledge about the failure mode effect analysis and green design process. | | | |

UNIT I : DESIGN FUNDAMENTALS

Importance of design - Design process - Considerations of good design - Morphology of design - Organization for design – Designing to codes and standards - Product and process cycles - Technological innovation.

UNIT II : CUSTOMER ORIENTED DESIGN

Identification of customer needs - Customer requirements - Bench marking quality function deployment -Product design specifications - Human factors in design - Ergonomics and aesthetics - Contracts - Product liability - Protecting intellectual property - Legal and ethical domains -Codes of ethics -Ethical conflicts.

UNIT III : DESIGN METHODS

Creativity and problem solving - Creative thinking methods - Theory of inventive problem solving (TRIZ) - Decision making - Embodiment design - Product architecture - Configuration design - Parametric design - Role of models in design - Rapid prototyping - Finite element analysis - Optimization.

UNIT IV : MATERIAL SELECTION PROCESSING AND DESIGN

Material selection process - Economics -Weighted property index - Classification of manufacturing process - Design for manufacture - Design for assembly - Designing for castings, Forging, Metal Forming, Machining and Welding - Residual stresses.

UNIT V : PROBABILITY CONCEPTS IN DESIGN & GREEN DESIGN PROCESS

Probability - Distributions - Test of hypothesis - Design of experiments - Reliability theory - Design for reliability - Robust design - Failure mode effect analysis. Design for environment - Green design process: Material life cycle, embodied energy, carbon footprint, green design in industry, sustainability.

UNIT I – FUNDAMENTALS AND SIGNLE DEGREE OF FREEDOM

(9)

Introduction -Sources Of Vibration – Methods of Vibration Analysis – Types of Vibration - Review Of Single Degree of Freedom Systems - Free vibrations, free damped vibrations, and forced vibrations with and without damping – Vibration Measuring Instruments vibrometers and accelerometer - Response To Arbitrary and non-harmonic Excitations – Transient Vibration – Impulse loads- Critical Speed Of Shaft-Rotor systems.

UNIT II - TWO DEGREE FREEDOM SYSTEM

Introduction - Free Vibration of Undamped and Damped – Forced Harmonic Vibration – Semi definite System -Coordinate Couplings – Vibration absorber – Torsional vibration absorber – Centrifugal pendulum absorber – Untuned vibration dampers

UNIT III - MULTI-DEGREE FREEDOM SYSTEM AND CONTINUOUS SYSTEM

(9)

(9)

(9)

Multi Degree Freedom System –Influence Coefficients and stiffness coefficients- Flexibility Matrix and Stiffness Matrix – Eigen Values and Eigen Vectors-Matrix Iteration Method – Approximate Methods: Dunkerley, Rayleigh's, and Holzer Method - Continuous System – Vibration of String, Shafts and Beams.

UNIT IV – VIBRATION ANALYSIS AND CONTROL

Vibration Analysis Overview - Vibration Measuring Instruments - Selection of Sensors - Accelerometer Mountings. -Vibration Exciters - Mechanical, Hydraulic, Electromagnetic and Electrodynamics – Frequency Measuring Instruments - Specification of Vibration Limits – Vibration severity standards- Vibration as condition Monitoring Tool-Vibration Isolation methods - Dynamic Vibration Absorber - Static and Dynamic Balancing machines – Field balancing.

UNIT V - ACOUSTICS

Psychoacoustics, Speech, mechanism of hearing, thresholds of the ear – sound intensity and frequency, loudness, equal loudness levels, loudness, pitch and timbre, beats, masking by pure tones, masking by noise.

analysis.

of

creep, fatigue, corrosion and wear failures.

Demonstrate the failure analysis tools.

innovative applications.

Implement of fatigue analysis principles in

Demonstrate the corrosion and wear failure

UNIT I : MATERIALS AND DESIGN PROCESS

mechanisms and fracture modes associated

statistical nature of fatigue and fatigue tests

To provide an exposure to the students on

To study about industrial application of

knowledge

environmentally-assisted

Factors affecting the behavior of materials in components, effect of component geometry and shape factors, design for static strength, stiffness, designing with high strength and low toughness materials, material selection process, introduction to stress, two dimensional and three-dimensional state of stress, Mohr's circle two and three dimensions, hydrostatic stress, von-Mises, maximum shear stress (Tresca), octahedral shear stress.

UNIT II : FRACTURE MECHANICS

To provide fundamental

failure analysis tools.

and

Ductile fracture, brittle fracture, cleavage-fractography, ductile to brittle transition, factors affecting ductile to brittle transition, fracture mechanics approach to design-energy criterion, stress intensity approach, time dependent crack growth and damage - Linear Elastic Fracture Mechanics: Griffiththeory, energy release rate, Instability and R-curve, stress analysis of cracks-stress intensity factor, Crack growth instability analysis.

UNIT III :FATIGUE

2.0

3.0

4.0

5.0

with failure.

corrosion

cracking.

Statistical nature of fatigue, signal-noise curve, low cycle fatigue, strain life equations, structural feature of fatigue, fatigue crack propagation, effect of stress concentration, size, surface properties, metallurgical variables on fatigue, case studies, designing against fatigue, detail design, improvements after failure and service, fatigue of bolts, welded and adhesive joints. Fatigue Tests-Purpose, specimen, fatigue test procedures, evaluation of fatigue test results, crack growth measurement. Creep, stress rupture, elevated temperature fatigue, super plasticity.

UNIT IV : CORROSION AND WEAR FAILURES

Types of corrosion, Factors influencing corrosion failures, analysis of corrosion failures, stress corrosion cracking - sources, characteristics of stress corrosion cracking, procedure of analyzing stress corrosion cracking, various types of hydrogen damage failures, corrective and preventive action. Types of wear, lubricated and non – lubricated wear, wear on different materials, different methods of wear measurement. Role of friction on wear, analysis of wear failures, wear tests -ferrography

UNIT V : FAILURE ANALYSIS TOOLS

Reliability concept and hazard function, application of Poisson, exponential and Weibull distribution for reliability, bathtub curve, parallel and series system, failure mode effect analysis - definition-Design, types, process, industrial case studies / Projects.

PREREQUISITE :

| COU | COURSE OBJECTIVES AND OUTCOMES: | | | | | | | |
|-------|---|--------|---|--|--|--|--|--|
| Cours | e Objectives | Course | e Outcomes | | | | | |
| 1.0 | To develop the modeling skills using computer graphic techniques. | 1.1 | Demonstrate computer graphic techniques | | | | | |
| 2.0 | To impart knowledge on CAD software and data exchange standards. | 2.1 | Using CAD software to exchange standards data | | | | | |
| 3.0 | To study the applications of NURBS and solid modeling. | 3.1 | Use of CAD software transfer of product data in various software. | | | | | |
| 4.0 | To gain knowledge on visual realism and computer animation. | 4. I | Describe the types NURBS and solid modeling | | | | | |
| 5.0 | To provide knowledge on assembly modeling and tolerance analysis. | 5.I | Demonstrate the knowledge of assembly modeling and tolerance analysis | | | | | |

UNIT I : INTRODUCTION TO COMPUTER GRAPHICS FUNDAMENTALS

Output primitives (points, lines, curves etc.) 2D & 3D transformation (Translation, scaling, rotations) windowing - view ports - clipping transformation Open GL Data Exchange standards- IGES, STEP etc. - Communication standards.

UNIT II : CURVES AND SURFACE MODELING

Representation of curves - Bezier curves- cubic spline curve - B-Spline curves - Rational curves - Curve manipulations Representation of surface modeling techniques - Analytical surfaces : Plane surface, ruled surface, surface of revolution and tabulated cylinder - synthetic surfaces: Hermite bicubic surface- Bezier surface and B-Spline surface - surface manipulation.

UNIT III : NURBS AND SOLID MODELING

NURBS - Basics - curves, lines, arcs, circle and bi linear surface Regularized Boolean set operations - primitive instancing - sweep representations - boundary representations constructive solid geometry comparison of representations - user inter face for solid modeling.

UNIT IV : VISUAL REALISM

Hidden Line - Surface-solid removal algorithms shading - coloring. Introduction to parametric and variational geometry based software sand the in principles creation of prismatic and lofted parts using the sepackages.

UNIT V : ASSEMBLY OF PARTS

Assembly modeling - interferences of positions and orientation - tolerances analysis - mass property calculations- mechanism simulation

PRE REQUISITE :

| | Course Objectives | Course Outcomes | | | | |
|-----|--|-----------------|---|--|--|--|
| 1.0 | To understand the principles of component design for easy manufacturing | 1.1 | The students will be able to analyze the given component and identify the suitable geometrical tolerances for manufacturing oriented design. | | | |
| 2.0 | To study the factors influencing form design, welding and forging. | 2.1 | The students will be able to apply the concept of DFM for form design, welding and forging | | | |
| 3.0 | To know the casting considerations for manufacturing oriented design | 3.1 | The students will be able to identify uneconomical design and modify component design for castings | | | |
| 4.0 | Apply design considerations for machining | 4.1 | The students will be able to suggest suitable design modifications to facilitate machining of components | | | |
| 5.0 | To expose the impact of design on environment to achieve eco-friendly component design | 5.1 | The students will be able to use design considerations for environmental issues | | | |

UNIT I - INTRODUCTION

General design principles for manufacturability - Factors influencing design -Types of problems to be solved evaluation of customer's requirements-Systematic working plan for the designer-Possible solutions - Evaluation method - Process capability - Feature tolerances - Geometric tolerances - Assembly limits - Datum features -Tolerance stacks - Interchangeable part manufacture and selective assembly

UNIT II - FACTORS INFLUENCING FORM DESIGN

Working principle, Material, Manufacture, Design - Materials choice - Influence of basic design, mechanical loading, material, production method, size and weight on form design- form design of welded members and forgings

UNIT III - COMPONENT DESIGN - CASTING CONSIDERATION

Form design of grey iron, steel, malleable iron and aluminium castings. Redesign of castings based on parting line considerations - Minimizing core requirements, machined holes, redesign of cast members to obviate cores.

UNIT IV - COMPONENT DESIGN - MACHINING CONSIDERATION

Design features to facilitate machining - drills - milling cutters - keyways - Dowelling procedures, counter sunk screws - Reduction of machined area - simplification by separation - simplification by amalgamation - Design for machinability - Design for economy - Design for clampability - Design for accessibility - Design for assembly. Redesign For Manufacture - Identification of uneconomical design - Modifying the design - Group technology - Computer Applications for DFMA

(9) echani

(9)

(9)

| UNIT V - DESIGN FOR THE ENVIRONMENT | (9) |
|-------------------------------------|-----|
| | (-) |

Introduction - Importance of DFE - Environmental objectives - Global issues - Regional and local issues - Basic DFE methods - Design guide lines - Lifecycle assessment - Basic method - AT&T's environmentally responsible product assessment - Weighted sum assessment method - Techniques to reduce environmental impact - Design to minimize material usage - Design for disassembly - Design for recyclability - Design for remanufacture - Design for energy efficiency - Design to regulations and standards

22EDB05 ADVANCED FINITE ELEMENT ANALYSIS

L T P C 3 0 0 3

PREREQUISITE :22EDA01

| | Course Objectives | | Course Outcomes |
|-----|---|-----|--|
| 1.0 | To understand the basic principles of the finite element analysis techniques and enhancing the ability to apply the tools of the analysis for solving practical problems arising in Engineering design. | 1.1 | Apply finite elements technique in engineering problem solving for various applications. |
| 2.0 | To create expertise in basic elements, one and two dimensional problems. | 2.1 | Derive finite element equation and to solve the real time ID and 2D structural and thermal problems. |
| 3.0 | To create expertise in basic elements of Isoperimetric elements problems. | 3.1 | Solve and analysis the engineering problems using isoparametric and parametric elements. |
| 4.0 | To provide knowledge on structural dynamic analysis of bar and beam element | 4.1 | Estimate the solve structural dynamic analysis |
| 5.0 | To study the non-linear problems and error estimates of FEM | 5.1 | Create nonlinear problems and error method |

UNIT I: ONE-DIMENSIONAL APPLICATIONS

Basic concept of FEM - Weighted residual methods - Variational formulation of B.V.P - Ritz method -Finite element modeling - Element equations - Linear and quadratic shape functions - Bar and beam elements - Bars and beams of arbitrary orientation - Applications to structural heat transfer problems.

UNIT II : TWO-DIMENSIONAL APPLICATIONS

Poisson equation - Laplace equation - Weak form - Element matrices for triangular and rectangular elements - Evaluation of integrals - Applications – Conduction- and convection heat transfer - Theory of elasticity - Plane strain - Plane stress - Axi-symmetric problems - Principle of virtual displacement.

UNIT III : ISOPARAMETRIC ELEMENTS

Natural Co-ordinate Systems - Lagrangian Interpolation Polynomials - Isoparametric elements -Quadrilateral elements formulation - Jacobian matrix -Triangular elements - Rectangular elements -Serendipity elements – Numerical Integration - Gauss quadrature - Illustrative Examples.

UNIT IV : STRUCTURAL DYNAMIC ANALYSIS

Dynamic equations - Consistent and lumped mass matrices - ID bar element - Formulation of element stiffness, mass and force matrices - Example problems. Natural frequencies - ID beam element - Formulation of element stiffness, mass matrices.

UNIT V : NON-LINEAR PROBLEMS AND ERROR ESTIMATES

Introduction - Material non-linearity - Elasto Plasticity - Plasticity - Visco plasticity - Geometric nonlinearity - Large displacement - Error norms and convergence rates - H-refinement with adaptivity adaptive refinement.

| 1.0 | To know the integrated design procedure of different machine elements for mechanical applications. | 1.1 | Apply concepts of design of shafts to ob solutions to real time engineering problem | | | | | | |
| 2.0 | To ensure that the student has thorough conceptual understanding of gear and gear boxes | 2.1 | Identify the gear tooth failure modes a design of gears | | | | | | |
| 3.0 | To study design concepts of dynamics and thermal aspects of brakes and clutches | 3.1 | Integrated design of brakes and clutches for machine tools | | | | | | |
| 4.0 | To study the design of systems consisting of machine elements | 4.1 | Categorize the engineering application Integrated design of machine elements | | | | | | |
| 5.0 | To study the design of systems consisting of transmission systems | 5.1 | 5.1 Apply the concepts of integrated det transmission systems | | | | | | |
| 1 | | | | | | | | | |

UNIT I : FUNDAMENTALS AND DESIGN OF SHAFTS

Phases of design - Standardization and interchange ability of machine elements - Process and Function Tolerances - Individual and group tolerances - Selection of fits for different design situations - Design for assembly and modular constructions - Concepts of integration - BIS, ISO,DIN, BS, ASTM Standards. Oblique stresses - Transformation Matrix - Principal stresses - Maximum shear stress - Theories of Failure - Ductile vs. brittle component design - Analysis and Design of shafts for different applications - integrated design of shaft, bearing and casing - Design for rigidity

UNIT II : DESIGN OF GEARS AND GEAR BOXES

Principles of gear tooth action - Gear correction - Gear tooth failure modes - Stresses and loads - Component design of spur, helical, bevel and worm gears - Design for sub assembly - Integrated design of speed reducers and multi-speed gear boxes - application of software packages.

UNIT III : BRAKES & CLUTCHES

Dynamics and thermal aspects of brakes and clutches - Integrated design of brakes and clutches for machine tools, automobiles and mechanical handling equipments.

UNIT IV: INTEGRATED DESIGN OF MACHINE ELEMENTS

Integrated Design of systems consisting of shaft, bearings, springs - Design of Elevators, Escalators

UNIT V: INTEGRATED DESIGN OF TRANSMISSION SYSTEMS

Integrated Design of systems consisting of belt, rope, chain, pulleys, gears, gear boxes, valve gear mechanisms

| | read and review the research articles | | articles related to technological developments | | | | | | | | |
| 2.0 | 2.0 To be aware of the recent technologies 2.1 Get practice of oral and written skills. | | | | | | | | | | |
| 3.0 | To work on a specific technical topic in Engineering design in order to acquire the skills of oral | 3.1 | Improve personal and communicative skills (e.g. speaking, listening, reading, and/or writing). | | | | | | | | |
| 4.0 | To mould students for technical writing abilities for seminars and conferences. | 4.1 | Adequate to understand inductive and deductive reasoning and increase their general problem solving skills. | | | | | | | | |
| 5.0 | To interpret and evaluate the quality of the seminar report | 5.1 | Develop the report and also to develop their presentation skills. | | | | | | | | |
| SYL | LABUS | | | | | | | | | | |

The students will work for two hours per week under the guidance of the faculty members. They will be asked to orally present on any topic of their choice related to engineering design and to engage in dialogue with the audience. A brief copy of their oral presentation should be submitted. Similarly, the students will have to present a seminar of not less than fifteen minutes and not more than thirty minutes on the technical topic. They will be answerable to the queries on the topic they present. The students as audience also should interact. Evaluation will be based on the technical presentation, interactive skills and the report they submit.

SYLLABUS:

The student individually works on a specific topic approved by the head of the department under the guidance of a faculty member who is familiar in this area. The student can select any topic which is relevant to the area of Engineering Design. The topic may be theoretical or case studies. At the end of the semester, a detailed report on the work done should be submitted which contains clear definition of the identified problem, detailed literature review related to the area of work and methodology for carrying out the work. The students will be evaluated through a viva-voce examination by a panel of examiners including one external examiner.

SYLLABUS

- The students will be required to visit minimum of two industries and observe the industry functions.
- The students will be required to present minimum of two technical presentations during this course on current topics related to the specialization.
- The same will be assessed by a committee appointed by the department.
- The students are expected to submit final report based on the above guidelines.

| 3 | 0 | 0 | |

C 3

PREREQUISITE :

COURSE OBJECTIVES AND OUTCOMES:

| Course Objectives | | | Course Outcomes | | |
|-------------------|---|-----|---|--|--|
| 1.0 | To impart knowledge on fluid power engineering and power transmission systems | 1.1 | Recognize the use of pumps and actuators in fluid power applications. | | |
| 2.0 | To understand the control elements in fluid power systems and electro-hydraulic systems | 2.1 | Utilize the control and regulation elements in fluid power systems. | | |
| 3.0 | To learn the hydraulic circuits for various industrial applications | 3.1 | Design hydraulic circuits for various industrial applications | | |
| 4.0 | To know the various methods of pneumatic systems and circuits design to solve the real world problems | 4.1 | Identify the various methods of pneumatic systems and circuits design used in industrial applications. | | |
| 5.0 | To gain knowledge about the maintenance of fluid power systems and special circuits. | 5.1 | Perform the installation and maintenance of the fluid power systems and utilize special circuits. | | |

UNIT I: OIL HYDRAULIC SYSTEMS AND HYDRAULIC ACTUATORS

Fluids - Properties - Types of Fluid power system - Hydraulic Power Generators - Selection and specification of pumps - Pump characteristics. Linear and Rotary Actuators - Selection, Specification and characteristics.

UNIT II : CONTROL AND REGULATION ELEMENTS

Pressure - direction and flow control valves - relief valves, non-return and safety valves - actuation systems. Electro hydraulic servo valves.

UNIT III : HYDRAULIC CIRCUITS

Reciprocation, quick return, sequencing, synchronizing circuits - accumulator circuits - industrial circuits - press circuits - hydraulic milling machine - grinding, planning, copying, - forklift, earth mover circuits design methodology- design and selection of components - safety and emergency mandrels - Cascade method.

UNIT IV : PNEUMATIC SYSTEMS AND CIRCUITS

Fundamentals of Pneumatic- Control elements, position and pressure sensing - Logic circuits -Switching circuits - Fringe conditions modules and these integration - Sequential circuits - Cascade methods - Mapping methods - Step counter method - Compound circuit design - Combination circuit design.

UNIT V : INSTALLATION, MAINTENANCE AND SPECIAL CIRCUITS

Pneumatic equipment - Selection of components - Design calculations - Application - Fault finding - Hydro pneumatic circuits - Use of microprocessors for sequencing - PLC, Low cost automation - Robotic circuits.

22EDX02 COMPOSITE MATERIALS AND MECHANICS

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

PRE REQUISITE : NIL

| | Course Objectives | | Course Outcomes |
|-----|--|-----|--|
| 1.0 | To understand the fundamentals of composite material strength and its mechanical behaviour. | 1.1 | Describe the properties of various available composite materials. |
| 2.0 | Understanding the analysis of fiber reinforced laminate design for different combinations of plies with different orientations of the fiber. | 2.1 | Fabricate the FRP and other composites by different manufacturing methods. |
| 3.0 | Thermo-mechanical behavior and study of residual stresses in Laminates during processing. | 3.1 | Analyze fiber reinforced Laminates for different combinations of plies with different orientations of the fiber. |
| 4.0 | Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronic chips. | 4.1 | Evaluate the stresses in the lamina of the laminate using different failure theories |
| 5.0 | To introduce thermal analysis of composite materials and mechanics | 5.1 | Select suitable composite or thermal analysis for industrial oriented applications. |

UNIT I : INTRODUCTION TO COMPOSITE MATERIALS

(9)

Definition-Matrix materials - polymers - metals - ceramics - Reinforcements: Particles, whiskers, inorganic fibers, metal filaments- ceramic fibers - fiber fabrication- natural composite wood, Jute - Advantages and drawbacks of composites over monolithic materials. Mechanical properties and applications of composites, Particulate - Reinforced composite Materials, Dispersion - Strengthened composite, Fiber-reinforced composites and fiber - Reinforced composites of fiber - Reinforced composites of fiber and composites.

UNIT II : MANUFACTURING OF COMPOSITES

Manufacturing of Polymer Matrix Composites (PMCs) – hand lay-up, spray technique, filament winding, Pultrusion, Resin Transfer Moulding (RTM) - bag moulding, injection moulding, Sandwich Mould Composites (SMC) - Manufacturing of Metal Matrix Composites (MMCs) - Solid state, liquid state, vapour state processing, Manufacturing of Ceramic Matrix Composites (CMCs) - hot pressing - reaction bonding process - infiltration technique, direct oxidation- interfaces.

UNIT III : INTRODUCTION, LAMINA CONSTITUTIVE EQUATIONS

(12)

(9)

Lamina Constitutive Equations: Lamina Assumptions - Macroscopic Viewpoint. Generalized Hooke's Law. Reduction to Homogeneous Orthotropic Lamina - Isotropic limit case, Orthotropic Stiffness matrix (Qij), Definition of stress and Moment Resultants. Strain Displacement relations. Basic Assumptions of Laminated anisotropic plates. Laminate Constitutive Equations - Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli Evaluation of Lamina Properties from Laminate Tests. Quasi-Isotropic Laminates. Determination of Lamina stresses within Laminates.

UNIT IV : LAMINA STRENGTH ANALYSIS AND ANALYSIS OF LAMINATED FLAT

Introduction - Maximum Stress and Strain Criteria. Von-Misses Yield criterion for Isotropic Materials. Generalized Hill's Criterion for Anisotropic materials. Tsai-Hill's Failure Criterion for Composites. Tensor Polynomial (Tsai-Wu) Failure criterion. Prediction of laminate Failure Equilibrium Equations of Motion. Energy Formulations. Static Bending Analysis. Buckling Analysis. Free Vibrations - Natural Frequencies.

UNIT V : THERMO-STRUCURAL ANALYSIS

(7)

Fabrication stresses / Residual stresses in FRP laminated composites-Co-efficient of Thermal Expansion (C.T.E.) - Modification of Hooke's Law. Modification of Laminate Constitutive Equations. Orthotropic Lamina C.T.E's -Stress and Moment Resultants due cooling of the laminates during fabrication-Calculations for thermomechanical stresses in FRP laminates.

22EDX03 MECHANICAL BEHAVIOR OF MATERIALS

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | | |

PRE REQUISITE : Course Objectives Course Outcomes 1.0 To know the mechanical behavior of metallic, 1.1 Students will demonstrate an understanding of the non-metallic and modern metallic materials under mechanical properties and behavior of materials. different loading and temperature conditions 2.0 Gain knowledge in selection of materials for the To identify various sources of dynamic loads and 2.1 design approaches of materials design of engineering structures. 3.0 To impart knowledge on relationship between 3.1 Know the properties and applications of various materials selection and processing systems materials 4.0 To gain knowledge about the modern metallic 4.1 Demonstrate the ability to identify engineering materials problems involving plastic deformation, fatigue, and fracture, and the tools required to solve these problems. 5.1 5.0 Familiarize in the area of material behaviour under To gain knowledge about the non metallic different loading and temperature conditions. materials (9)

UNIT I : BASIC CONCEPTS OF MATERIAL BEHAVIOR

Elasticity in metals and polymers - Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour -Super plasticity -Theories of failure - Griffith's theory - Ductile, brittle transition in steel - creep.

UNIT II : BEHAVIOUR UNDER DYNAMIC LOADS AND DESIGN APPROACHES

Stress intensity factor and fracture toughness - Fatigue, fatigue test, fatigue crack propagation under constant load and variable load mechanisms and Paris law - fail - safe design approaches - Effect of surface and metallurgical parameters on fatigue - Failure analysis, sources of failure, procedure of failure analysis-Impact effects - Notch effects

UNIT III : SELECTION OF MATERIALS

Motivation for selection, cost basis and service requirements - Selection for mechanical properties - Selection for surface durability corrosion and wear resistance - Relationship between materials selection and processing - Case studies in materials selection with relevance to aero, auto, marine, machinery, nuclear and high temperature applications - Computer aided materials selection.

UNIT IV: MODERN METALLIC MATERIALS

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel - Intermetallics, Ni and Ti aluminides, Super plasticity materials - smart materials, shape memory alloys - Metallic glass and nano crystalline materials. Nano structured coatings, thin films, CNT.

UNIT V: NON METALLIC MATERIALS

Polymeric materials - Formation of polymer structure - Production techniques of fibers, foams, adhesives and coating - structure, properties and applications of engineering polymers - Advanced structural ceramics, bio degradable ceramics. WC, TiC, TaC, Al2O3, SiC, Si3N4 CBN and diamond - properties, processing and applications.

| 22EDX04 | MAINTENANCE | ENGINEERING |
|---------|-------------|-------------|

| L | Г | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | | |

PRE REQUISITE :

| | Course Objectives | | Course Outcomes | | | | |
|-----|--|-----|---|--|--|--|--|
| 1.0 | To enable the student to understand the principles, functions and practices adapted in industry for the successful management of maintenance activities | 1.1 | Demonstrate the basics of maintenance systems | | | | |
| 2.0 | To explain the different maintenance strategies like Preventive maintenance, condition monitoring and repair of machine elements | 2.1 | Gain ability to plan and schedule maintenanceactivities | | | | |
| 3.0 | To illustrate some of the simple instrumentsused for condition monitoring | 3.1 | Familiar with the safety and other aspects of maintenance functions | | | | |
| 4.0 | To learn the planning and scheduling of activitiesin spare Parts management techniques | 4.1 | Establish maintenance strategies according to system characteristics and design transition programs to implement these strategies | | | | |
| 5.0 | To introduce the safety and other aspects of maintenance functions | 5.I | Demonstrate different types of accidents and hazards | | | | |

UNIT I : INTRODUCTION TO MAINTENANCE SYSTEMS

Introduction to repair and Maintenance - Maintenance as business - Maintenance systems such as reactive, preventive, predictive or proactive systems - Human resources management in Maintenance management - maintainability - Inherent and overall availability - Mean time between failures, mean time to repairs and mean down time - Testability and supportability - Design for Maintenance - Poor maintainability aspects - Design for reliability

UNIT II : CONDITION BASED MAINTENANCE

Condition based monitoring of equipment and systems - condition monitoring techniques such as a) Vibration analysis, b) Ultrasonic detection techniques, c) Thermography, d) Oil and lubricant analysis, e) Motor condition monitoring (MCM) - Shaft alignments through laser - Vibration instruments - Outline on Thermography

UNIT III : MAINTENANCE TECHNIQUES SUCH AS RCM, TPM & CMMS

Reliability centred Maintenance - Failure Mode and Effect Analysis - Root cause Analysis - logic tree analysis -Criticality matrix - Total Productive Maintenance, Overall Equipment Effectiveness - Lean manufacturing -TPM and TPO - Relationship between OEE and world - class Maintenance - Ladder of Maintenance improvement- Computerized Maintenance management system in a business scenario - data acquisition for effective management of CMMS

UNIT IV : ASSET PLANNING AND SCHEDULING OF ACTIVITIES IN MAINTENANCE

(9)

(9)

(9)

(9)

Asset and spare part management, - Conventional spare Parts management techniques such as Economic Order Quantity, two bin systems - Latest trends in monitoring through bar codes, mobile computer and wireless data transmissions - Different aspects of planning and scheduling of Maintenance, such as shutdowns - Critical aspects of both routine and shut down Maintenance - Bar charts - PERT network during shut down - Man power Training and utilization of skilled manpower - Sequencing of activities

| UNIT V : SAFETY AND OTHER ASPECTS OF MAINTENANCE FUNCTIONS | (9) |
|--|-----|
| | (7) |

Safety Engineering - Hazard analysis - General rules and guidelines in safety and hazard prevention -Analytical tools - Hazard analysis - Fault Tree Analysis - Sneak Circuit analysis - Integrated approach to Maintenance - Statistical distributions such as normal, gamma and Weibull in Maintenance - Maintenance effectiveness

UNIT I: EXPERIMENTAL STRESS ANALYSIS USING STRAIN GUAGUES

(9)

(9)

(9)

Overview of Experimental Stress Analysis - Optical Methods Work as Optical Computers - Stress - Strain and Displacement Fields. Introduction to Strain Gauges - Strain Sensitivity of a Strain Gauge - Bridge Sensitivity -Rosettes, Strain Gauge Alloys, Carriers and Adhesives. Performance of Strain Gauge System - Temperature Compensation - Two-wire and Three - wire Circuits. Correction Factors for Special Applications - Special Gauges.

UNIT II : TRANSMISSION PHOTOELASTICITY

Physical Principle of Strain Gauges - Photo elasticity and Moiré - Hologram Interferometry - Speckle Methods -Introduction to Shearography - TSA, DIC and Caustics. Fringe Patterns - Richness of Qualitative Information – Multi - Scale Analysis in Experimental Mechanics, Selection of an Experimental Technique.

UNIT III : 3D PHOTOELASTICITY AND DIGITAL PHOTOELASTICITY

Introduction to Transmission Photo elasticity - Ordinary and Extraordinary Rays - Light Ellipse, Passage of Light Through a Crystal Plate, Retardation Plates, Stress - optic Law, Determination of Photo elastic Parameters at an Arbitrary Point, Tardy's Method of Compensation, Calibration of Photo elastic Materials, Fringe Thinning Methodologies, Fringe Ordering in Photo elasticity, Miscellaneous Topics in Transmission Photo elasticity, Three Dimensional (3D) Photo elasticity, Overview of Digital Photo elasticity.

UNIT IV : PHOTOELASTIC COATINGS AND BRITTLE COATINGS

Introduction to Photo elastic Coatings - Correction Factors for Photoelastic Coatings, Coating Materials -Selection of Coating Thickness, Industrial Application of Photoelastic Coatings, Calibration of Photo elastic Coatings. Introduction to Brittle Coatings - Analysis of Brittle Coatings.

UNIT V: NON DESTRUCTIVE TESTING METHODS

Load testing on structures, buildings, bridges and towers - Rebound Hammer - Acoustic emission - Sound level meter - Ultrasonic testing principles and application - Holography - use of laser for structural testing - Vibration transducers for velocity and acceleration measurements - Vibrometer - Vibration Analyzer.

UNIT I - INTRODUCTION TO MECHANICS

Principles of Mechanics, Vector mechanics, Mechanics of motion - Newton's laws of motion, Kinetics, Kinematics of motion, Fluid mechanics - Euler equations and Navier Stoke's equations, Visco elasticity, Constitutive equations, Stress transformations, Strain energy function.

UNIT II - BIOFLUID MECHANICS

Introduction, viscosity and capillary viscometer, Rheological properties of blood, laminar flow, Couette flow and Hagen-poiseuille equation, turbulent flow. Cardiovascular system - biological and mechanical valves development, artificial heart valves testing of valves, Structure, functions, material properties and modeling of Blood vessels.

UNIT III - BIOSOLID MECHANICS

Hard Tissues: Bone structure & composition mechanical properties of bone, cortical and cancellous bones, viscoelastic properties, Maxwell & Voight models - anisotropy. Soft Tissues: Structure, functions, material properties and modeling of Soft Tissues: Cartilage, Tendon, Ligament, Muscle.

UNIT IV - BIOMECHANICS OF JOINTS AND IMPLANTS

Skeletal joints, forces and stresses in human joints, Analysis of rigid bodies in equilibrium, free body diagrams, types of joint, biomechanical analysis of elbow, shoulder, spinal column, hip knee and ankle. Design of orthopedic implant, specifications for a prosthetic joint, biocompatibility, requirement of a biomaterial, characteristics of different types of biomaterials, manufacturing process of implants, fixation of implants.

(9)

(9)

(9)

(9)

UNIT V - MODELING AND ERGONOMICS

(9)

Introduction to Finite Element Analysis, Analysis of bio mechanical systems using Finite element methods, Graphical design. Ergonomics- Gait analysis, Design of work station, Sports biomechanics, Injury mechanics.

22EDX09 MECHATRONICS IN MANUFACTURING SYSTEMS

| L | т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

PRE REQUISITE : NIL

| | Course Objectives | | Course Outcomes | | | | | | |
|-----|--|-----|--|--|--|--|--|--|--|
| 1.0 | To develop interdisciplinary knowledge on electronics, electrical, mechanical and computer systems for the design of mechanical and electronic systems. | 1.1 | Identify the Mechatronics approach for designprocess and modeling interdisciplinary systems. | | | | | | |
| 2.0 | To acquire knowledge on sensors and transducers used in mechatronics system. | 2.1 | Apply the suitable sensors and transducers to achieve the desired output motion. | | | | | | |
| 3.0 | To familiarize with the microprocessors in mechatronics. | 3.1 | Demonstrate the architecture of microprocessor with suitable interfacing components. | | | | | | |
| 4.0 | To gain knowledge about the design of fluid power circuits in mechatronics systems | 4.1 | Design the fluid power circuits and analyze the hydraulic systems. | | | | | | |
| 5.0 | To gain knowledge about the real timeinterfacing systems. | 5.1 | Analyze the interfacing of sensors, actuators and various instruments involved in mechatronics system. | | | | | | |

UNIT I - INTRODUCTION

Introduction to Mechatronics - Systems - Mechatronics in Products - Mechatronics approach for design process, modeling of engineering systems, modeling system with spring, damper and mass, modeling chamber filled with fluid, modeling pneumatic actuator. Transfer functions, frequency response of systems.

UNIT II - SENSORS AND TRANSDUCERS

Sensors for motion and position measurement, force, torque, tactile, temperature sensors, ultrasonic sensors, magnetostrictive sensors.

UNIT III - MICROPROCESSORS IN MECHATRONICS

Introduction - Architecture - Pin configuration - Instruction set - Programming of Microprocessors using 8085 instructions - Interfacing input and output devices - Interfacing D/A converters and A/D converters - Applications - Temperature control - Stepper motor control - Traffic light controller.

UNIT IV - AUTOMATION SYSTEM DESIGN

Design of fluid power circuits - cascade, KV-map and step counter method. PLC - Basic structure - Input / Output processing - Programming of PLC. Sizing of components in pneumatic and hydraulic systems. Analysis of hydraulic circuits.

UNIT V - REAL TIME INTERFACING

Introduction to data acquisition and control systems, overview of I/O process, virtual Instrumentation, interfacing of various sensors and actuators with PC, Condition monitoring, SCADA systems. Traditional Mechatronics design - Designing - Possible design solutions – Case studies of Mechatronics systems.

22EDX10 BEARING DESIGN AND ROTOR DYNAMICS

| L | Т | P | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

PRE REQUISITE : NIL

| | • | 1 | | | | | | |
|-------|---|-----------|---|--|--|--|--|--|
| | Course Objectives | | Course Outcomes | | | | | |
| 1.0 | To know about different types of bearings available for machine design and their operating principles | 1.1 | Explain the application of various types of bearingsand their operating principles. | | | | | |
| 2.0 | To design hydrodynamic/ hydrostatic / rolling bearing for given specifications and analyze the bearings for their performance | 2.1 | Design and suggest bearings for specific applications | | | | | |
| 3.0 | To gain knowledge about the selection and design of rolling bearings | 3.1 | Analyze fatigue life calculations for various types of bearings, | | | | | |
| 4.0 | To introduce dynamics of hydrodynamic bearing design. | 4.1 | Discuss the dynamics of rotors mounted on Hydrodynamic Bearings | | | | | |
| 5.0 | To know about rotor vibration and design configurations of stable journal bearings | 5.1 | Identify the vibrating devices, critical speed ofshafts and bearing behavior. | | | | | |
| UNI | UNIT I - CLASSIFICATION AND SELECTION OF BEARINGS (6) | | | | | | | |
| Selec | tion criteria-Dry and Boundary Lubrication I | Bearings- | Hydro dynamic and Hydro static bearings Electro | | | | | |
| Magr | netic bearings-Dry bearings-Rolling Element | bearings- | Bearings for Precision. Applications-Foil Bearings- | | | | | |

Magnetic bearings-Dry bearings-Rolling Element bearings-Bearings for Precision. Applications-Foil Bearings-Special bearings- Selection of plain Bearing materials –Metallic and Non metallic bearings-Materials for rolling bearings.

UNIT-II DESIGN OF FLUID FILM BEARINGS

Design and performance analysis of Thrust and Journal bearings - Full, partial, fixed and pivoted journal bearings design procedure - Minimum film thickness - lubricant flow and delivery - power loss, Heat and temperature distribution calculations - Design based on Charts & Tables and Experimental curves - Design of Foil bearings - Air Bearings - Design of Hydrostatic bearings –Thrust and Journal bearings - Stiffness consideration - flow regulators and pump design.

| UNIT III : SELECTION AND DESIGN OF ROLLING BEARINGS | (10) |
|---|------|
|---|------|

Contact Stresses in Rolling bearings – Centrifugal stresses – Elasto hydrodynamic lubrication – Fatigue life calculations- Bearing operating temperature – Lubrication- Selection of lubricants – Internal clearance – Shaft and housing fit- - Mounting arrangements – Materials for rolling bearings-Manufacturing methods – Ceramic bearings – Rolling bearing cages – bearing seals selection.

UNIT IV : DYNAMICS OF ROTORS MOUNTED ON HYDRO DYNAMIC BEARINGS

Hydrodynamic Lubrication equation for dynamic loadings-Squeeze film effects in journal bearing sand thrust bearings - Rotating loads, alternating and impulse loads in journal bearings - Journal centre Trajectory - Analysis of short bearings under dynamic conditions - Finite difference solution for dynamic conditions

UNIT V: ROTOR DYNAMICS

Rotor vibration and Rotor critical speeds - Support stiffness on critical speeds - Stiffness and damping coefficients of journal bearings - Computation and measurements of journal bearing coefficients - Mechanics of Hydro dynamic Instability – Half frequency whirl and Resonance whip - Design configurations of stable journal bearings

22EDX11 ADDITIVE MANUFACTURING

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | | |

PRE REQUISITE : NIL

| | Course Objectives | Course Outcomes | | | |
|-----|---|--|--|--|--|
| 1.0 | To educate students with fundamental and advanced knowledge in the field of additive manufacturing technology. | d I.I The students are expected to learn about a Additive Manufacturing (AM) technologies. | | | |
| 2.0 | Gain insights on the need, advantages and limitations of additive manufacturing versus traditional manufacturing | 2.1 | Find the appropriate fabrication technology while considering the reverse engineering and CAD modelling. | | |
| 3.0 | Find out the various applications of additive manufacturing, Deployment levels, innovativeand optimized product design. | 3.1 | Identify the liquid based and solid based additive manufacturing systems for a specific application. | | |
| 4.0 | To explore the potential of additive manufacturing in different industrial sectors. | 4.1 | Select the powder based additive manufacturing systems for a specific application. | | |
| 5.0 | To apply 3D printing technology for additive manufacturing | 5.1 | Elaborate 3D printing, Shape Deposition Manufacturing processes and their applications. | | |

UNIT I : INTRODUCTION

Need - Development of AM systems – AM process chain - Impact of AM on Product Development - Virtual Prototyping- Rapid Tooling – RP to AM -Classification of AM processes-Benefits- Applications.

UNIT II : REVERSE ENGINEERING AND CAD MODELLING

Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modelling techniques: Wire frame, surface and solid modelling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation- Software for AM- Case studies.

UNIT III : LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS

(12)

(8)

(9)

(9)

Stereo lithography Apparatus (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications. Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modelling (FDM): Principle, details of processes, process variables, types, products, materials and applications. Laminated Object Manufacturing (LOM): Working Principles, details of processes, process, materials, advantages, limitations

UNIT IV : POWDER BASED ADDITIVE MANUFACTURING SYSTEMS

Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, materials, post processing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

UNIT V: OTHER ADDITIVE MANUFACTURING SYSTEMS

(7)

Three-dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Shape Deposition Manufacturing (SDM), Ballastic Particle Manufacturing (BPM), Selective Laser Melting, Electron Beam Melting.

22EDX12 ADVANCED METAL FORMING TECHNIQUES

| Γ | Т | Ρ | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | | |

PRE REQUISITE :

COURSE OBJECTIVES AND OUTCOMES:

| | Course Objectives | Course Outcomes | | | | |
|-----|--|-----------------|---|--|--|--|
| 1.0 | To study the concepts of latest metal forming techniques and their applications in metal forming industry. | 1.1 | Acquire the basics of plasticity and forming | | | |
| 2.0 | To study the thermo mechanical regimes and its requirements of metal forming | 2.1 | Classify the basic metal forming techniques, forging, extrusion, drawing and rolling. | | | |
| 3.0 | To gain knowledge about the sheet metal forming process | 3.1 | Fabricate the product using sheet metal forming with conventional process. | | | |
| 4.0 | To gain knowledge about the powder metallurgy and special forming processes | 4.1 | Fabricate basic parts and assemblies using powder and non- powder machine shop equipment in conjunction | | | |
| 5.0 | To develop a thorough understanding of the electromagnetic forming and its applications | 5.1 | Acquire the basics of production by using electromagnetic forming | | | |

UNIT I: INTRODUCTION TO THEORY OF PLASTICITY AND FORMING

(9)

(9)

(9)

Theory of plastic deformation - Yield criteria - Tresca and Von-mises - Distortion energy - Stress strain relation - Mohr's circle representation of a state of stress - cylindrical and spherical coordinate system - upper and lower bound solution methods - thermo pelastic Elasto plasticity - Elasto Visco plasticity.

UNIT II : THEORY AND PRACTICE OF BULK FORMING PROCESSES

Analysis of plastic deformation in Forging, Rolling, Extrusion, rod/wire drawing and tube drawing - Effect of friction -calculation of forces, work done - Process parameters, equipment used - Defects - applications - Recent advances in Forging, Rolling, Extrusion and Drawing processes - Design consideration in forming - Formability of laminated sheet - Overview of FEM applications in metal forming analysis.

UNIT III : SHEET METAL FORMING

Formability studies - Conventional processes - H E R F techniques - Super plastic forming techniques - Hydro forming - Stretch forming - Water hammer forming - Principles and process parameters - Advantage, Limitations and application.

UNIT IV : POWDER METALLURGY AND SPECIAL FORMING PROCESSES

(9)

(9)

Overview of P/M technique - Advantages - applications - Powder perform forging - powder rolling - Tooling, process parameters and applications - Orbital forging - Isothermal forging - Hot and cold isostatic pressing - High speed extrusion - Rubber pad forming - Fine blanking - LASER beam forming.

UNIT V : ELECTROMAGNETIC FORMING AND ITS APPLICATIONS

Electromagnetic forming process - Electro - magnetic forming machines - Process variables - Coils and Dies - Effect of resistivity and geometry - EM tube and sheet forming, stamping, shearing and welding - Applications - Finite element analysis of EM forming.

PRE REQUISITE : 17EDA01

| | | 1 | | | | | |
|-----|--|--|--|--|--|--|--|
| | Course Objectives | Course Outcomes | | | | | |
| 1.0 | To get knowledge on minimization methods namely elimination methods, interpolation methods and direct root methods | I.I Solve one dimensional minimization problems using elimination or interpolation methods | | | | | |
| 2.0 | To get exposed various unconstrained and constrained minimization methods | 2.1 | Optimally derive solutions for constrained /unconstrained optimization problems using appropriate method | | | | |
| 3.0 | To provide an exposure on the design applications of geometric and stochastic programming. | 3.1 | Ability to portray the methods of optimization techniques (direct and indirect methods) | | | | |
| 4.0 | To be familiar with various modern optimization techniques | 4.1 | Express the steps involved in geometric, Stochastic programming and modern methods of optimization. | | | | |
| 5.0 | To gain knowledge about the modern methods of optimization techniques. | 5.1 | Reveal the knowledge of modern methods of optimization. | | | | |

UNIT I - UNIT I : ONE DIMENSIONAL MINIMIZATION METHODS

(9)

(9)

Unimodal function - Elimination methods -unrestricted search - exhaustive search - dichotomous search - interval halving method - ibonacci method - golden section method - interpolation methods-quadratic and cubic interpolation methods - direct root methods - Newton method - Quasi Newton method - secant method

UNIT II - UNCONSTRAINED OPTIMIZATION TECHNIQUES

Classification of unconstrained minimization methods - direct search methods - random walk method univariate method - Powell's method - simplex method - Indirect search methods - steepest descent method -Fletcher - Reeves method - Newton's method - Marquardt method - Broyden-Fletcher-Goldfarb-Shanno (BFGS) Method

UNIT III - CONSTRAINED OPTIMIZATION TECHNIQUES

(9)

(9)

Direct Methods - Sequential Linear Programming(SLP) - Zoutendijk's method of feasible directions - Rosen's gradient projection method - Generalized Reduced Gradient (GRG) method - sequential quadratic programming - Indirect Methods - interior penalty function method - exterior penalty function method - Augmented Lagrange Multiplier (ALM) method

UNIT IV - GEOMETRIC AND STOCHASTIC PROGRAMMING

Unconstrained geometric programming problem - differential calculus method - arithmetic-geometric inequality method - constrained geometric programming problem - mixed inequality constraints - applications - formulation of geometric programming problems of design of hydraulic cylinder and helical spring - Stochastic nonlinear programming and geometric programming in design

UNIT V - MODERN METHODS OF OPTIMIZATION

Genetic algorithms - Simulated annealing - Particle swarm optimization - Ant colony optimization - Optimization of fuzzy systems – Neural - Network - Based Optimization.

22EDX14 COMPUTATIONAL FLUID DYNAMICS

| L | Т | Ρ | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | | |

PREREQUISITE : NIL

| | Course Objectives | Course Outcomes | | | |
|-----|---|-----------------|--|--|--|
| 1.0 | To introduce governing equations of fluid flows. | 1.1 | Classify the basic equations of computational fluid dynamics | | |
| 2.0 | To introduce numerical modeling and its role in the field of fluid flow and heat transfer. | 2.1 | Solve complex problems in the field of heat transfer. | | |
| 3.0 | To enable the students to understand the various discretization methods, solution procedures and turbulence modeling. | 3.1 | Solve complex problems in the field of CFD | | |
| 4.0 | To apply the concepts to the finite volume method for convection diffusion | 4.1 | Analyze convective problems using computational methods. | | |
| 5.0 | To give detailed study of calculation flow field by FVM | 5.1 | Examine and assessing basic numerical methods for fluid flow problems. | | |

UNIT I : GOVERNING EQUATIONS AND BOUNDARY CONDITIONS

Basics of computational fluid dynamics - Governing equations of fluid dynamics - Continuity, Momentum and Energy equations - Physical boundary conditions - Time-averaged equations for Turbulent Flow - Turbulent - Kinetic Energy Equations - Mathematical behavior of PDEs on CFD - Elliptic, Parabolic and Hyperbolic equations.

UNIT II : FINITE DIFFERENCE METHOD

Derivation of finite difference equations - Simple Methods - General Methods for first and second order accuracy - solution methods for finite difference equations - Elliptic equations - Iterative solution Methods Parabolic equations - Explicit and Implicit schemes - Example problems on elliptic and parabolic equations

UNIT III : FINITE VOLUME METHOD (FVM) FOR DIFFUSION

Finite volume formulation for steady state one, two and three - dimensional diffusion problems. One dimensional unsteady heat conduction through explicit, Crank - Nicolson and fully implicit schemes.

UNIT IV : FINITE VOLUME METHOD FOR CONVECTION DIFFUSION

Steady one-dimensional convection and diffusion - central, upwind differencing schemes-properties of discretization schemes - conservativeness, boundedness, trasnportiveness, hybrid, power-law, quick schemes.

UNIT V : CALCULATION FLOW FIELD BY FVM

Representation of the pressure gradient term and continuity equation - Staggered grid - Momentum equations - Pressure and Velocity corrections - Pressure Correction equation, Simple algorithm and its variants. Turbulence models, mixing length model, two equation (k-) models - High and low Reynolds number models.

22EDX15 DESIGN OF PRESSURE VESSEL AND PIPING

| L | Т | Ρ | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

PRE REQUISITE : NIL

| | Course Objectives | | Course Outcomes |
|-----|--|-----|--|
| 1.0 | To educate the means of flow distribution and stress analysis in pressure vessels. | 1.1 | Predict the thermal behavior and carry out a stress analysis in pressure vessels. |
| 2.0 | To understand the stress analysis of piping layout | 2.1 | Design the pressure vessels and piping layout for industrial applications. |
| 3.0 | To get a basic understanding of the design of vessels | 3.1 | Analyze the failure of pressure vessels and safety measures taken for avoiding failure |
| 4.0 | To study the buckling and fracture analysis in vessels | 4.1 | Determine the stresses in pressure vessels to design the system. |
| 5.0 | To learnt piping layout and piping stress analysis | 5.1 | To create the flow diagram and layout of piping with consideration of stress and thermal analysis. |

| UNIT I : INTRODUCTION | (9) | | | | |
|--|-----|--|--|--|--|
| Methods for determining stresses - Terminology and Ligament Efficiency - Applications. | | | | | |
| UNIT II : STRESSES IN PRESSURE VESSELS | (9) | | | | |
| Introduction - Stresses in a circular ring, cylinder - Membrane stress Analysis of Vessel Shell components - | | | | | |

Introduction - Stresses in a circular ring, cylinder - Membrane stress Analysis of Vessel Shell components -Cylindrical shells, spherical Heads, conical heads - Thermal Stresses - Discontinuity stresses in pressure vessels.

UNIT III : DESIGN OF VESSELS

Design of Tall cylindrical self-supporting process columns - supports for short vertical vessels - stress concentration - variable Thickness transition section in a cylindrical vessel, about a circular hole, elliptical openings. Theory of Reinforcement - pressure vessel Design.

UNIT IV : BUCKLING AND FRACTURE ANALYSIS IN VESSELS

(9)

(9)

(9)

Buckling phenomenon - Elastic Buckling of circular ring and cylinders under external pressure - collapse of thick walled cylinders or tubes under external pressure - Effect of supports on Elastic Buckling of Cylinders - Buckling under combined External pressure and axial loading.

UNIT V : PIPING

Introduction - Flow diagram - Piping layout and piping stress analysis.

22EDX16 DESIGN OF HEAT EXCHANGERS

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

PRE REQUISITE : NIL

| | Course Objectives | Course Outcomes | | | | |
|-----|--|-----------------|---|--|--|--|
| 1.0 | To build the necessary background for the design of the various types of heat exchangers. | 1.1 | Apply the concepts and knowledge get to design and analyze the sizing and rating of the heat | | | |
| 2.0 | To learn the thermal and stress analysis | 2.1 | Solve the efficiency of heat exchanger in | | | |
| | on various parts of the heat exchangers. | | various heat transfer methods. | | | |
| 3.0 | To learn the sizing of heat exchangers, thermal and mechanical stress analysis for various heat exchange applications. | 3.1 | Analyze heat transfer rate depending on nature of problem and available data | | | |
| 4.0 | To impart knowledge on compact and | 4. I | Design and performance calculations of | | | |
| | plate heat exchangers | | plate heat exchanger. | | | |
| 5.0 | To improve the design knowledge in condensers & cooling towers | 5.1 | Ability to design and analyze the performance of the condensers and cooling towers. | | | |

UNIT I : FUNDAMENTALS AND CLASSIFICATION OF HEAT (9) EXCHANGER

Parallel flow, Counter flow and cross flow; shell and tube and plate type; single pass and multi pass, once through stream generators etc.

UNIT II : PROCESS DESIGN OF HEAT EXCHANGERS

(9)

Heat transfer correlations, Overall heat transfer coefficient, LMTD, sizing of finned tube heat exchangers, U tube heat exchangers, fouling factors, pressure drop calculations.

UNIT III: MECHANICAL DESIGN OF SHELL AND TUBE TYPE

(9)

Thickness calculations, Tube sheet design using TEMA formula, Concept of equivalent plate for analyzing perforated analysis, flow induced vibration risks including acoustic issue and remedies, tube to tube sheet joint design, buckling of tubes, thermal stresses

UNIT IV : COMPACT AND PLATE HEAT EXCHANGERS

(9)

Types - merits and demerits - design of compact heat exchangers, plate heat exchangers - performance influencing parameters, limitations.

UNIT V : CONDENSERS & COOLING TOWERS

(9)

Design of surface and evaporative condensers - cooling tower - performance characteristics.

|-----|---|-----------------|--|--|--|--|--|
| 1.0 | To understand the productivity and its measurement in various levels | 1.1 | To use the productivity measurement International. National and industrial levels | | | | |
| 2.0 | To know the productivity planning | 2.1 | To make short term and long term productivity planning in organizations | | | | |
| 3.0 | To understand the organizational transformation and re- engineering | 3.1 | To familiarise with organizational transformation and re- engineering | | | | |
| 4.0 | To understand the use of Re-engineering process improvement tools | 4.1 | To use Re-engineering process improvement tools | | | | |
| 5.0 | To impart knowledge at re- engineering tools and implementation of reengineering projects | 5.1 | To Implement the reengineering projects in commercial purpose. | | | | |

| UNIT I: PRODUCTIVITY | (9) | | | | | |
|---|----------------|--|--|--|--|--|
| Productivity - Factor affecting productivity - Productivity benefit model - Productivity Cycle - Productivity | | | | | | |
| Measurement at International, National and Industrial level. | | | | | | |
| UNIT II : PRODUCTIVITY PLANNING IN ORGANIZATIONS | (9) | | | | | |
| Productivity planning: Importance - Short term versus long term - Responsibilities - We | ighted partial | | | | | |
| productivity- Production evaluation tree - Long term - Total Productivity maximization model - Total | | | | | | |
| Productivity Profit model. | | | | | | |
| UNIT III : ORGANIZATIONAL TRANSFORMATION | | | | | | |
| Principles of organizational transformation and re-engineering - Six R'S of organizational transformation and | | | | | | |
| reengineering - fundamentals of process re-engineering - Preparing the workforce for transformation and | | | | | | |
| reengineering - Principle & methodology- Guidelines - LMI CIP Model. | | | | | | |
| UNIT IV : RE-ENGINEERING PROCESS IMPROVEMENT MODELS | (9) | | | | | |
| PMI models, Moen and Nolan Strategy for process improvement, LMICIP personal improvement model- | | | | | | |
| NPRDC process improvement model. | | | | | | |
| UNIT V : RE-ENGINEERING TOOLS AND IMPLEMENTATION | (9) | | | | | |
| Analytical and process tools and techniques - Information and Communication Technology - Implementation | | | | | | |
| of Reengineering Projects - Success Factors and common implementation Problem - Case studies. | | | | | | |
| | | | | | | |

22EDX19 DESIGN FOR SIX SIGMA

| | | | | L | Т | Ρ | С | | |
|-----------------------------------|---|-----|--|-----------------|----------------|---------------|------|--|--|
| | | | | 3 | 0 | 0 | 3 | | |
| PRE R | PRE REQUISITE : | | | | | | | | |
| Course Objectives Course Outcomes | | | | | s | | | | |
| 1.0 | To gain insights about the importance of lean manufacturing and six sigma practices | 1.1 | Understand Six Sigma Methodology and how in applies to their day-to-day work. | | | | | | |
| 2.0 | To gain knowledge of improving define phase in production process | 2.1 | Relate the tools and techniques of lean sigma to increase productivity. | | | | | | |
| 3.0 | To gain knowledge of humanizing measure and analysis phase. | 3.1 | Familiar with methodology to produce products with minimum wastages and maximum Productivity | | | | | | |
| 4.0 | To impart knowledge on design phase of six sigma | 4.1 | Get familiarized in six | sigma. | | | | | |
| 5.0 | To impart knowledge on validate phase | 5.1 | Ability to create analysis performance v | the vith Sir | con nulatio | itrol ch n | art, | | |

UNIT I : INTRODUCTION TO SIX SIGMA

Introduction to Six sigma, Project charter, PPM calculator, Gauge R&R , Linear Regression, One / Two way ANOVA, Assembly toleranceing, Basic Control charts, Case studies.

UNIT II : DEFINE PHASE

Customer CTQ, QFD, Standardization, Reactive design to Predictive design quality.

UNIT III : MEASURE & ANALYSE PHASE

Decomposition, Principal compound methods, Statistical distributions (non parametric), FMECA (Quantitative model), Reliability (Non normal), Availability, Maintainability (log normal), Risk assessment, Warranty prediction, QCF.

UNIT IV : DESIGN PHASE

Generate and validate system / sub system models (Field trials), Identifying transfer function, Score cards, Design robustness – Taguchi SN ratio's, Error proofing.

UNIT V : VALIDATE PHASE

Predicting process performance with Simulation, Testing a design, Statistically confirm build compare Predictions, Supplier - Manufacturing control plans for mean and variance, control charts, Piloting a design.

| COU | COURSE OBJECTIVES AND OUTCOMES: | | | | | | | | | | |
| | Course Objectives | | Course O | utcom | es | | | | | | |
| 1.0 | To understand the deformation of bodies under the different loads. | 1.1 | Apply the failure theory concepts and strusting strain relationship while designing products. | | | | | | | | |
| 2.0 | To understand dynamics of stresses in various sections. | 2.1 | Acquire knowledge ab and deflections in beam | out sh 1s. | near ce | nter, S | Stresses | | | | |
| 3.0 | To familiarize the students in the curvec flexible members and stresses in flat plates. | 3.1 | Classify Curved flexib stresses in flat plates. | le me | mbers | and ty | ypes of | | | | |
| 4.0 | To solve problems involving torsion of noncircular sections. | 4.1 | Calculate the torsion used in various applicat | and tions. | stresse | es in s | ections | | | | |
| 5.0 | To solve problems involving radial and tangential stresses and contact stresses. | 5.1 | Demonstrate radial a solid disc. | ınd ta | ngentia | al stre | sses in | | | | |

UNIT I : ELASTICITY

Stress, stress tensor, stress concentration factor, stress strain relation and general equation of elasticity in cartesion, polar and spherical coordinates, differential equations of equilibrium - compatibility - boundary conditions - representation of three - dimensional stress of a tension generalized hook's law - St. Venant's principle - plane stress - Airy's stress function. Energy methods.

UNIT II : SHEAR CENTER AND UNSYMMETRICAL BENDING

Location of shear center for various thin sections - shear flows. Stresses and deflections in beams subjected tounsymmetrical loading - kern of a section.

UNIT III : CURVED FLEXIBLE MEMBERS AND STRESSES IN FLAT PLATES

Curved flexible members, circumference and radial stresses - deflections - curved beam with restrained ends closed ring subjected to concentrated load and uniform load - chain links and crane hooks. Solution of rectangular plates - pure bending of plates - deflection - uniformly distributed load - various end conditions.

UNIT IV: TORSION OF NON-CIRCULAR SECTIONS

(9) Torsion of rectangular cross section - St.Venants theory - elastic membrane analogy Prandtl's stress function torsional stress in hollow thin wall tubes.

UNIT V : STRESSES IN ROTARY SECTIONS AND CONTACT STRESSES

(9)

(9)

(9)

(9)

Radial and tangential stresses in solid disc and ring of uniform thickness and varying thickness with allowable speeds - Methods of computing contact stress - Deflection of bodies in point and line contact applications.

UNIT I : SURFACE INTERACTION AND SURFACE TREATMENT

Topography of Surfaces - Surface features - Properties and Measurement - Surface interaction - Surface treatments - Surface modifications - surface coatings methods- Surface Topography measurements - Laser methods - instrumentation - International standards in friction and wear measurements

UNIT II : WEAR AND FRICTION

Types of wear - Mechanism of various types of wear - Laws of wear -Theoretical wear models - Wear of Metals and Non

metals - Adhesive theory of sliding friction - Rolling friction - Friction properties of metallic and Non-Metallic Materials - Friction in extreme conditions - Thermal considerations in sliding contact

UNIT III : LUBRICANTS AND LUBRICATION REGIMES

Lubricants and their physical properties - Viscosity and other properties of oils – Additives - Selection of Lubricants - Lubricants standards ISO,SAE,AGMA, BIS standards - Lubrication Regimes - Solid Lubrication-Dry and marginally lubricated contacts- Boundary Lubrication - Hydrodynamic lubrication - Elasto and plasto hydrodynamic - Magneto

hydrodynamic lubrication - Hydro static lubrication - Gas lubrication.

UNIT IV : THEORY OF HYDRODYNAMIC AND HYDROSTATIC LUBRICATION

Reynolds Equation,- Assumptions and limitations-One and two dimensional Reynolds Equation - Reynolds and Somerfield boundary conditions - Pressure wave, flow, load capacity and friction calculations in Hydrodynamic bearings - Long and short bearings - Pad bearings and Journal bearings-Squeeze film effects -Thermal considerations - Hydrostatic lubrication of Pad bearing - Pressure , flow , load and friction calculations - Stiffness considerations- Various types of flow restrictors in hydrostatic bearings.

(9)

(9)

(9)

(9)

UNIT V : CONTACT MECHANICS AND TRIBO MEASUREMENTS

Contact mechanics, Analysis of contacts, Elastic plastic contact of frictionless solids, problems. Bearing torque calculation, temperature analysis, endurance testing and failure analysis, bearing performance measurements, bearing vibration measurements.

UNIT I: ZERO AND ONE DIMENSIONAL NANOSTRUCTURE- NANOWIRES ANDNANORODS

Nanoparticles through homogenous nucleation, nanoparticles through the heterogeneous nucleation, kinetically confined synthesis of nanoparticles, epitaxial core - shell nanoparticles. Spontaneous growth, template based synthesis, electro spinning, and lithography.

UNIT II: 2-DIMENSIONAL NANOSTRUCTURES AND FABRICAITON

Fundamentals of film growth, vacuum science, Physical vapor deposition (PVD), Chemical vapor deposition (CVD), Atomic layer deposition (ALD), Electrochemical deposition, Sol-Gel films. Lithography, nano manipulation and

nanolithography, soft lithography, assembly of nanoparticles and nanowires, other methods of micro fabrication.

UNIT III : NANOMECHANICS AND NANO ELECTRONICS

A high speed review of motion: Displacement, velocity, acceleration and force, nano mechanical oscillation, feeling faint forces. Electron energy bands, electrons in solids: conductors, insulation and semi-conductors, fermi energy, the

density of states for solids, quantum confinement, tunneling, single electron phenomenon, molecular electronics.

UNIT IV : NANOSCALE HEAT TRANSFER AND NANOPHOTONICS

Nanoscale heat, conduction, convection, radiation. Photonics properties of nano materials, near - field light, optical

tweezers, photonic crystals.

UNIT V : NANOSCALE FLUID MECHANICS

Fluids at the nanoscale: major concepts, flow fluids flow at the nanoscale, applications of nanofluids.

| | Course Objectives | Course Outcomes | | | | | |
|-----|--|-----------------|--|--|--|--|--|
| 1.0 | To impart knowledge on MEMS and manufacturing techniques | 1.1 | The students will be able to identify the needs of micro electromechanical systems | | | | |
| 2.0 | To get an exposure on the materials for MEMS and micro systems | 2.1 | The students will be able to develop a knowledge to select materials for Micro systems | | | | |
| 3.0 | To create exposure to packaging techniques of micro system fabrication processes | 3.1 | The students will be able to select the suitable fabrication processes for MEMS | | | | |
| 4.0 | To impart knowledge on micro manufacturing processes | 4.1 | The students will be able to apply knowledge of micro manufacturing techniques and applications to the design and manufacturing of an MEMS device | | | | |
| 5.0 | To educate the influence of micro system packaging | 5.1 | The students will be able to identify the selection of packaging materials of MEMS | | | | |

UNIT I - INTRODUCTION

Introduction to MEMS and Microsystems - Typical MEMS and Micro system products - Microsystems and micro electronics - Applications of Microsystems in automotive and other industries - Microsensors - Acoustic wave sensors, Bio medical sensors - Optical sensors, Pressure sensors - Micro actuators - Micro grippers, Micro motors, Micro valves, Micro pumps

UNIT II - MATERIALS FOR MEMS AND MICROSYSTEMS

Substrates and Wafers - Active substrate materials - Silicon as a substrate material - Silicon compounds - Silicon Dioxide, Silicon Carbide, Silicon Nitride, Polycrystalline Silicon - Silicon Piezoresistors - Gallium Arsenide - Quartz - Polymers - Polymers as Industrial Materials, Polymers for MEMS and Microsystems, Conductive Polymers -Packaging Materials

UNIT III - MICROSYSTEM FABRICATION PROCESSES

(9)

(9)

(9)

(9)

Photolithography - Photoresists and Application, Light Sources, Phoresist Development, Removal and Postbacking - Ion implantation - Diffusion - Oxidation - Chemical Vapor Deposition - Working Principle, Chemical Reactions, Rate of deposition - Physical Vapor Deposition - sputtering

UNIT IV - MICRO MANUFACTURING

Bulk Micro manufacturing - Etching - Isotropic and Anisotrotpic etching, Wet etching, Dry etching - Surface micromachining - General process, Mechanical problems associated with surface micromachining - LIGA Process general Process, Materials for substrates and photo resists - Electroplating - SLIGA Process.

UNIT V - MICROSYSTEM PACKAGING

(9)

Mechanical packaging of microelectronics – Micro system packaging - General considerations, Three levels of micro system packaging - Interfaces in micro system packaging - Essential packaging technologies – Die preparation, Surface bonding, Wire bonding - Three dimensional packaging - Assembly of microsystems -Selection of packaging materials

|-----------------------------|---|---|---|---|
| | L | Т | Р | С |
| | 3 | 0 | 0 | 3 |
| PRE REOUISITE : NIL | | | | |

| | Course Objectives | Course Outcomes | | | | | | | |
|-----|--|-----------------|---|--|--|--|--|--|--|
| 1.0 | To impart the knowledge surface damage | 1.1 | Analyse the surface damage of materials. | | | | | | |
| 2.0 | To provide surface metallurgy techniques to improve the surface properties` | 2.1 | Examine the Surface Metallurgy techniques for altering the surface properties. | | | | | | |
| 3.0 | To impart knowledge in various surface treatment process | 3.1 | Demonstrate the procedures in various surface treatment process | | | | | | |
| 4.0 | To give the corrosion knowledge about surface engineering | 4.1 | Identify the types and classification of corrosion for various surfaces | | | | | | |
| 5.0 | To impart the knowledge to characterize the surface | 5.1 | Analyse the characteristics of surfaces through various metallurgical analysis. | | | | | | |
| UNI | T I : SURFACE DAMAGE | | (9) | | | | | | |

Introduction: Purpose and Need of Surface Engineering, Surface and Sub-surface regions, Classification of Surface Modification Techniques, Scope of Surface Engineering, Role of Surface Properties, Surface Energy. Surface Damage: Factors causing Material Damage, Type of Wear and Mechanisms, Techniques to evaluate Damage of Wear Surfaces. Materials: Material Properties and Wear, Properties required for better Wear Resistance, Selection of Materials for Surface Engineering.

UNIT II : SURFACE METALLURGY

Surface Engineering by changing the Surface Metallurgy: Introduction, Transformation Hardening Methods, Modified Surfaces using LASER and TIG, Plastic Deformation based approaches. Surface Engineering by changing the Composition: Carburizing, Nitriding, Use of Plasma, LASER Alloying, Surface modification using Diffusionbased processes. Surface Modification by Coating and Cladding: Protection and Dilution of Coating and Cladding, Energy density and Cooling rate. Weld surfacing, LASER cladding, Thermal Spraying, Electroplating, Electroless Process.

UNIT III : SURFACE TREATMENT

Introduction - Surface properties, Superficial layer - Wear resistant coatings and Surface treatments - Techniques - PVD - CVD - Physical CVD - Ion implantation - Surface welding - Applications of coatings and surface treatments in wear and friction control - Characteristics of Wear resistant coatings - New trends in coating technology - DLC - CNC - Thick coatings - Nano - engineered coatings - Other coatings, Corrosion resistant coatings.

UNIT IV : CORROSION

(9)

(9)

(9)

(9)

Introduction - Principle of corrosion - Classification of corrosion - Types of corrosion - Factors influencing corrosion - Testing of corrosion - In-service monitoring, Simulated service, Laboratory testing - Evaluation of corrosion - Prevention of corrosion - Material selection, Alteration of environment, Design, Cathodic and Anodic protection, Corrosion inhibitors.

UNIT V : CHARACTERIZATION OF SURFACES

Characterization of Engineered Surfaces: Characterization of Surface Properties, Thickness of Coatings and Films, Bond strength of Coating and substrate, Soundness of Modified surfaces by NDT, Destructive Testing of Modified Surfaces, Adhesive Wear, XRD Analysis, SEM, Compositional Analysis, EDAX Analysis, Macroscopic observation and Metallographic Examination.

22EDX25 ENGINEERING FRACTURE MECHANICS

| L | Т | Ρ | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |
| | | | |

PRE REQUISITE :

| | Course Objectives | Course Outcomes | | | | | |
|-----|--|-----------------|---|--|--|--|--|
| 1.0 | To provide knowledge on elements of solid mechanics. | 1.1 | Estimate stress, strain and deformation of solid mechanics | | | | |
| 2.0 | To understand the crack growth and energy balance. | 2.1 | Analyze crack growth for various loading. | | | | |
| 3.0 | To study the analysis of energy balance and crack growth mechanics | 3.1 | Analyze the different effects of cracks, thermal and residual stresses. | | | | |
| 4.0 | To understand the working principle and analysis of fatigue crack | 4.1 | Calculate fatigue life for various loading spectrum | | | | |
| 5.0 | To study the applications of fracture mechanics. | 5.1 | Applying fracture mechanics concept in large scale yielding. | | | | |

UNIT I - ELEMENTS OF SOLID MECHANICS

The geometry of stress and strain, elastic deformation, plastic and elastic-plastic deformation - limit analysis.

UNIT II - STATIONARY CRACK UNDER STATIC LOADING

Two dimensional elastic zone fields - Analytical solutions yielding near a crack front - Irwin's approximation -Plastic zone size - Dugdaale model -J integral and its relation to crack opening development.

UNIT III - ENERGY BALANCE AND CRACK GROWTH

Griffith analysis - Linear fracture mechanics -Crack opening displacement - Dynamic energy balance - Crack arrest.

UNIT IV - FATIGUE CRACK GROWTH CURVE

Empirical Relation describing crack growth by fatigue - life calculations for a given load amplitude - effects of changing the load spectrum - Effects of Environment.

UNIT V - APPLICATIONS OF FRACTURE MECHANICS

Crack Initiation under large scale yielding - thickness as a design parameter - mixed mode fractures - crack instability in thermal and residual stress fields - numerical methods.

22EDX26 INDUSTRIAL ROBOTICS AND EXPERT SYSTEMS

L С 3 0 0 3

PREREQUISITE :

| | Course Objectives | Course Outcomes | | | | |
|-----|--|-----------------|---|--|--|--|
| 1.0 | To impart the design concepts | 1.1 | Describe the robot kinematics and dynamics. | | | |
| 2.0 | To create expertise in various drive systems of robot. | 2.1 | Create basic program to control robot. | | | |
| 3.0 | To ensure that the student has thorough conceptual understanding of robot sensors. | 3.1 | Demonstrate sensors used in robotics field. | | | |
| 4.0 | This course provides an in-depth coverage of the central topics in robot cell design | 4.1 | Summarize the stages in robot dell design | | | |
| 5.0 | To give the student knowledge about robot programming, and expert systems | 5.1 | Explain the steps involved in robot programming | | | |

UNIT I: INTRODUCTION AND ROBOT KINEMATICS

Definition need and scope of Industrial robots - Robot anatomy - Work volume - Precision movement - End effectors - Sensors. Robot Kinematics - Direct and inverse kinematics - Robot trajectories - Control of robotmanipulators - Robot dynamics - Methods for orientation and location of objects.

UNIT II: ROBOT DRIVES AND CONTROL

Controlling the Robot motion - Position and velocity sensing devices - Design of drive systems - Hydraulic and Pneumatic drives - Linear and rotary actuators and control valves - Electro hydraulic servo valves, electric drives- Motors - Designing of end effectors - Vacuum, magnetic and air operated grippers.

UNIT III : ROBOT SENSORS

Transducers and Sensors - Tactile sensor - Proximity and range sensors - Sensing joint forces - Robotic vision system Image Representation - Image Grabbing - Image processing and analysis - Edge Enhancement - Contrast Stretching Band Rationing - Image segmentation - Pattern recognition - Training of vision system.

UNIT IV: ROBOT CELL DESIGN AND APPLICATION

Robot work cell design and control - Safety in Robotics - Robot cell layouts - Multiple Robots and machine interference - Robot cycle time analysis - Industrial application of robots.

UNIT V: ROBOT PROGRAMMING, AI AND EXPERT SYSTEMS

Methods of robot programming - Characteristics of task level languages - lead through programming methods - Motion interpolation. Artificial intelligence - Basics - Goals of artificial intelligence - Al techniques - problem representation in AI – Problem reduction and solution techniques - Application of AI and KBES in Robots.

| 5.0 | To understand integration of 5.1 Integrate PLM/PDM vith other applications | I Integrate PLM/PDM with othe | | | | | | | |

UNIT I : HISTORY, CONCEPTS AND TERMINOLOGY OF PLM

Introduction to PLM, Need for PLM, opportunities of PLM, Different views of PLM - Engineering Data Management (EDM), Product Data Management (PDM), Collaborative Product Definition Management (cPDm), Collaborative Product Commerce (CPC), Product Lifecycle Management (PLM).PLM/PDM Infrastructure -Network and Communications, Data Management, Heterogeneous data sources and applications.

UNIT II : PLM/PDM FUNCTIONS AND FEATURES

User Functions - Data Vault and Document Management, Workflow and Process Management, Product Structure Management, Product Classification and Programme Management. Utility Functions -Communication and Notification, data transport, data translation, image services, system administration and application integration.

UNIT III : DETAILS OF MODULES IN A PDM/PLM SOFTWARE

Case studies based on top few commercial PLM/PDM tools

UNIT IV : ROLE OF PLM IN INDUSTRIES

Case studies on PLM selection and implementation (like auto, aero, electronic) - other possible sectors, PLM visioning, PLM strategy, PLM feasibility study, change management for PLM, financial justification of PLM, barriers to PLM implementation, ten step approach to PLM, benefits of PLM for-business, organisation, users, product or service, process performance.

UNIT V : BASICS ON CUSTOMISATION/INTEGRATION OF PDM/PLM SOFTWARE

PLM Customization, use of EAI technology (Middleware), Integration with legacy data base, CAD, SLM and ERP

| 1.0 | To know the basics of machine vision and computer vision. | 1.1 | The student will be able to apply the vision concepts in various mechatronics applications. | | | | | | | |
| 2.0 | To study the image acquisition techniques. | 2.1 | The student will be able to recognize the Image acquisition techniques and tools. | | | | | | | |
| 3.0 | To learn the image processing methods. | 3.1 | The student will be able to apply the image processing tools and libraries. | | | | | | | |
| 4.0 | To understand the methods used for image analysis. | 4.1 | The student will be able to analyze the images in the case of Robotic or IoT applications. | | | | | | | |
| 5.0 | To gain exposure on Image processing applications. | 5.1 | The student will be able to select the right machine vision system for implementing ir industrial applications. | | | | | | | |

UNIT I - INTRODUCTION

(8)

(12)

(10)

(6)

Human vision – Machine vision and Computer vision – Benefits of machine vision – Block diagram and function of machine vision system implementation of industrial machine vision system – Physics of Light – Interactions of light – Refraction at a spherical surface.

UNIT II - IMAGE ACQUISITION

Scene constraints – Lighting parameters – Lighting sources, Selection – Lighting Techniques – Types and Selection – Machine Vision Lenses and Optical Filters, Specifications and Selection Imaging Sensors – CCD and CMOS, Specifications – Interface Architectures – Analog and Digital Cameras – Digital Camera Interfaces – Camera Computer Interfaces, Specifications and election – Geometrical Image formation models – Camera Calibration.

UNIT III - IMAGE PROCESSING

Machine Vision Software – Fundamentals of Digital Image – Image Acquisition Modes – Image Processing in Spatial and Frequency Domain – Point Operation, Thresholding, Grayscale Stretching – Neighborhood Operations, Image Smoothing and Sharpening – Edge Detection –Binary Morphology – Color image processing.

UNIT IV - IMAGE ANALYSIS

Feature extraction – Region Features, Shape and Size features – Texture Analysis – Template Matching and Classification – 3D Machine Vision Techniques – Decision Making.

UNIT V - MACHINE VISION APPLICATIONS

(9)

Machine vision applications in manufacturing, electronics, printing, pharmaceutical, textile, applications in nonvisible spectrum, metrology and gauging, OCR and OCV, vision guided robotics – Field and Service Applications – Agricultural, and Bio medical field, augmented reality, surveillance, bio-metrics.

| 3.0 | To foster the ability to understand and to utilize the mechanics of writing | 3.1 | The students will be able to explain the skills needed for writing quality research paper | | | | | | |
| 4.0 | To Infer the skills needed when writing the Conclusion | 4.1 | The students will be able to explore the recent areas of research | | | | | | |
| 5.0 | To focus research and its key variables, guiding through research process | 5.1 | The students will be able to illustrate the goo quality of paper at very first-time submission | | | | | | |

UNIT I - INTRODUCTION

Planning and Preparation - Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

UNIT II - PRESENTATION SKILLS

Clarifying Who Did What- Highlighting Findings - Hedging and Criticizing- Paraphrasing - Sections of a Paper -Abstracts - Introduction

UNIT III- MECHANICS OF RESEARCH

Key skills needed for writing - Title, Abstract, Introduction, Discussion, Conclusion, The Final Check

UNIT IV - PROCESS OF RESEARCH WRITING

Skills needed for writing Methods - skills needed when writing Results - skills needed when writing Discussion - skills needed when writing Conclusion.

UNIT V- QUALITY RESEARCH PAPER

Useful phrases, Checking Plagiarism - Bibliography- Citation- how to ensure paper is as good as it could possibly be the first- time submission

| | | | approacties | | | | |

| UNIT I - INTRODUCTION | (6) | | | | | |
|--|-------------|--|--|--|--|--|
| Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Na | atural and | | | | | |
| Manmade Disasters: Difference, Nature, Types and Magnitude. | | | | | | |
| UNIT II - REPERCUSSIONS OF DISASTERS AND HAZARDS | (6) | | | | | |
| Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts. | | | | | | |
| UNIT III- DISASTER PRONE AREAS IN INDIA | | | | | | |
| Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To | | | | | | |
| Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epide | emics. | | | | | |
| UNIT IV - DISASTER PREPAREDNESS AND MANAGEMENT | | | | | | |
| Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: App | lication of | | | | | |
| Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governm Community Preparedness. | ental and | | | | | |
| UNIT V- RISK ASSESSMENT | (6) | | | | | |
| Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. | | | | | | |
| Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, | | | | | | |
| Participation in Risk Assessment. Strategies for Survival | | | | | | |

|-----|---|-----|--|------------------------------|-------------------|---------------------|---------------------------|--|--|--|
| | | | | L | T | P | C | | | |
| PRE | REQUISITE : NIL | | | 2 | U | U | U | | | |
| | Course Objectives | | Course (| Outco | omes | | | | | |
| 1.0 | To understand the premises informing the twin themes of liberty and freedom from a civil rights perspective. | 1.1 | I Discuss the growth of the demand for civil rig in India for the bulk of Indians before the arri of Gandhi in Indian politics. | | | | | | | |
| 2.0 | To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional | 2.1 | Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India. | | | | | | | |
| 3.0 | To role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism. | 3.1 | Discuss the circumstances surrounding the foundation of the Congress Socialist Party[CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution | | | | | | | |
| 4.0 | To address the role of socialism in India after the commencement of the Bolshevik Revolutionin1917and its impact on the initial drafting of the Indian Constitution. | 4.1 | Discuss the passage 1956. | of th | e Hind | u Cod | e Bill of | | | |
| 1.0 | To understand the premises informing the twin themes of liberty and freedom from a civil rights perspective. | 1.1 | Discuss the growth c in India for the bulk of Gandhi in Indian po | of the of Ind olitics. | demano ians be | d for ci fore th | ivil rights ne arrival | | | |

UNIT I - HISTORY OF MAKING OF THE INDIAN CONSTITUTION(6)History, Drafting Committee, (Composition & Working)(6)UNIT II - PHILOSOPHY OF THE INDIAN CONSTITUTION(6)

Preamble, Salient Features

UNIT III- ONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT IV - LOCAL ADMINISTRATION

District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

UNIT V- ELECTION COMMISSION

Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners - Institute and Bodies for the welfare of SC/ST/OBC and women.

22EDX28 FUEL CELL TECHNOLOGY L т Ρ С 0 3 3 0 **PRE REQUISITE : Nil Course Outcomes Course Objectives** At the end of course, the students will be able to To impart knowledge about the various types of Explain the various fuel cell types with their 1.0 1.1 fuel cells merits and demerits. To learn the basic electrochemical principles of Describe the electrochemical principles, reactions 2.1 2.0 fuel cell and basic laws of fuel cell То know the components, materials and interpret the various components, materials and 3.0 3.1 operating conditions of fuel cell operating conditions used in fuel cell. 4.0 То provide fundamental knowledge of Outline the different modes of generation, 4.1 Hydrogen usage on fuel cells storage and delivery of Hydrogen Apply the different types of fuel cell systems for 5.0 To provide an exposure on the applications of 5.I fuel cells various applications (9) **UNIT I : FUEL CELLS TYPES** Introduction to fuel cells – Comparison of fuel cell, I.C. Engine and battery – working of fuel cell - Types of fuel cells – Alkaline Fuel Cell, Phosphoric Acid Fuel Cell, Proton Exchange Membrane Fuel Cell, Molten Carbonate Fuel Cell, Solid Oxide Fuel Cell, Direct Methanol Fuel Cell, Biologically based fuel cell. (9) UNIT II : ELECTROCHEMICAL PRINCIPLES Electrochemical reactions - Scientific Units, Constants and Basic Laws - Faraday's Law - Measure of reactant utilization efficiency - Generic fuel cell - thermodynamics of fuel cell process - performance evaluation of fuel cell. (9) **UNIT III : PEMFC - COMPONENTS, MATERIALS AND OPERATING** CONDITIONS Components and materials of PEMFC - Membrane, Catalyst, GDL, Flow field plate, Current collector, End plate -Operating conditions – Pressure, temperature, flow rate, humidity, mass balance, other factors – single cell and stack (9) **UNIT IV : HYDROGEN USAGE** Hydrogen – physical and chemical properties, salient characteristics - Modes of hydrogen generation - Modes of hydrogen storage – hydrogen delivery – overall hydrogen infrastructure development (9) **UNIT V: FUEL CELL APPLICATIONS** Concepts of EV and FCEV - Fuel cell applications - Transportation - stationery power - backup power - Fuel Cells for Small Portable Power.

| 1.0 | To understand the concepts of various forms of Nonrenewable and renewable energy sources. | 1.1 | Interpret the variou scenario | s energ | gy sour | ces and | energy |
| 2.0 | To learn the bio energy sources and its processing | 2.1 | Describe the bio en new products devel | ergy re oped fo | source or vario | s, convo us appl | ersion an ications |
| 3.0 | To study the wind power and the conversion devices and applications | 3.1 | Explain the wind power generation, conversion devices, offshore wind energy and hybrid system | | | | |
| 4.0 | To impart knowledge about solar energy and solar cells | 4.1 | Demonstrate the power generation using solar cells and their applications | | | | |
| 5.0 | To provide an exposure on the power generation using fuel cells, OTEC and other energy sources | 5.1 | interpret the different energy sources like fuel cells, OTEC, ocean wave and geothermal | | | | |
| UNI | T I : ENERGY SOURCES AND SCE | NARI | 0 | | | | (9) |

Renewable and Non-renewable energy sources - Coal, Oil, Gas, Nuclear and Hydro power – generation and utilization in the past, present and future projections – impact of fossil fuels on environment – Energy scenario in India – Growth of energy sector and its planning in India.

UNIT II : BIO ENERGY SOURCE

Bio energy - Biomass resources and their classification - Biomass conversion processes - types of biogas Plant - applications - alcohol production from biomass – bio diesel production – Urban waste to energy conversion - Biomass energy programme in India – E20 concept.

UNIT III : WIND ENERGY SOURCE

Nature of the wind – power in the wind – factors influencing wind – wind data and energy estimation - wind speed monitoring - site selection - wind energy conversion devices - classification, applications – offshore wind energy - Hybrid systems - wind energy potential and installation in India – Repowering concept.

UNIT IV : SOLAR ENERGY SOURCE

Solar radiation at the earth's surface – solar radiation measurements –flat plate and concentrating collectors – solar thermal applications - heating, cooling, desalination, drying, cooking, etc. – solar thermal electric power plant - principle of photovoltaic conversion of solar energy, types of solar cells - Photovoltaic applications - solar PV power plant – Net metering concept.

UNIT V: FUEL CELL AND OTHER ENERGY SOURCES

Fuel cell– principle of working - types - construction and applications - Hydrogen production and storage-Principle of ocean thermal energy conversion (OTEC) - ocean thermal power plant - ocean wave energy conversion - tidal energy conversion - small hydro – geothermal energy - geothermal power plant
