Description about the Consultancy:

The AC 18 Testing box and 6P6C Common testing module is the device to test the Mobile charger cable functioning in the following three criteria:

1. Open Circuit
2. Short Circuit between two or more cables
3. Wrong terminal in the end connectors

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The charger cable consists of six different wires and the ends are crimped with male micro USB connector. The module is designed to work will all temperature conditions and the microcontroller chip is molded with glue to avoid the malfunction due to humidity. Four different output indications are given to show Pass/Open/Short/Wrong Connection. In this consultancy work the above said two modules are serviced by reprogramming the Controller and replacing the regulators to make correct function of the module.

Description about the Consultancy:

The project entitled "Web based traveller management system" has been developed under Microsoft ASP.Net as front end and MS-SQL Server 2008 as back end. The coding language used is VB.Net. The main aim of the consultancy work is describing the necessary places for customer on selected cities. The application contains the additional option that is the places where we are going within the sri vathiyar travels website. It is also giving an additional option for customer to save their memories of the travel with photo gallery. So customer can login anytime and they can see those memories. The project contains administrator, customer and feedback modules.

Description about the Consultancy:

The Project System for Medical Store Management has an easy to interface and is built with respected customer service to allow stock maintenance, database access and electronic documentation for billing purposes. The program also encourages consumer computing discounts, frequent revenue, and identifies measures to avoid possible loss of revenue. Our system mainly deals with different type of Medical item, customer, dealer very easily. Since we had time constraints we were not able to make out module into live and living portal but would try for the same together with the interference.

The **Medical Store Management System Project in Python** is created using python programming language. Medical Store Management System consists of a Python Script (**main.py**) and a database file. This python projects with source code for Medical Store Management System is primarily based on **Tkinter**. This system has a graphical user interface applied by using the Python programming language and SQLite3.

Description about the Consultancy:

The mix design of M25 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water.

Before the that physical properties of the materials such as sieve analysis of FA and CA has been find out. Also the specific gravity of Cement, Fine aggregate and Course Aggregate are to be used for the preparation of mix design.

Super plasticizer is used to reduce the water content, It will increase the workability of the concrete during the poring of concrete.

Description about the Consultancy:

An irrigation system had been developed to supervise the paddy crop field using sensors (soil moisture sensor, pH sensor, and flow sensor), and this irrigation system works based on the concept of IoT. For the effective utilization of the water in agriculture, it is mandatory to have a system that can support the farmer and act as a guide to irrigate their fields. It is evident that rainwater and the groundwater levels are decreasing day-by-day, thereby increasing the requirement of new systems to utilize the water resources effectively for agriculture. Moreover, it is a known fact that the economy and growth of a country purely depends on the agricultural income. This project, Intelligent system (IS) for rice crop monitoring using IoT based communication system had been developed. We have analyzed our implemented model was adequate and accurate and having a speedy response time due to the use of IoT based network. The experimental results of ISS are more proficient than the existing conventional and unadventurous irrigation approach for rice crops. From the analysis, we concluded that the installation of IS saves time and ensures practical usage of water in a rice crop field. In the future of irrigation systems, the work can be extended to a large scale by incorporating the WSN in the agricultural fields with the concept of artificial intelligence mechanism, which can provide accurate and useful results for different types of crops.

Description about the Consultancy:

A Mini construction lift is used to reach at various heights in order to do work securely and accurately. These Mini lifts can also be used to help workers perform in buildings, water proofing, chemical factories, building foundations, dam and bridge works etc. The main benefits of using Mini lifts are that it is simple and flexible to use. We have a proven track record of never unsatisfying our clients on the quality front. Our entire product ranges have a long assistance life and increase satisfaction level of the user. Our Mini construction lifting equipment is User-friendly and convenient and very easy to carry it anywhere in construction sites. In construction site, always require to move the materials from one place to another and from that moving point of view this is excellent equipment for moving purpose. This is not much weight any one can easily carry it.

Description about the Consultancy:

Concrete waste is typically generated during construction, demolition, or renovation projects and it can consist of concrete slabs, blocks, pipes, and other materials. Rather than disposing of these waste materials in landfills, which can take up valuable space and harm the environment, concrete recycling helps reduce the amount of waste sent to landfills, conserves natural resources, and reduces carbon emissions associated with the production of new concrete. To recycle concrete, a crushing process is required. It is mostly used for the removal of concrete slabs, walls and bridge decks. The jaws of this crusher can be operated without any hydraulic pressure. The crushing process depends on the pressing forces created by movable front jaw and fixed rear jaw, which can separate the concrete from the steel bar and crush the concrete at the same time.

Description about the Consultancy:

The AC 18 Testing box and 6P6C Common testing module is the device to test the Mobile charger cable functioning in the following three criteria:

1. Open Circuit
2. Short Circuit between two or more cables
3. Wrong terminal in the end connectors

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The charger cable consists of six different wires and the ends are crimped with male micro USB connector. The module is designed to work will all temperature conditions and the microcontroller chip is molded with glue to avoid the malfunction due to humidity. Four different output indications are given to show Pass/Open/Short/Wrong Connection. In this consultancy work the above said two modules are serviced by reprogramming the Controller and replacing the regulators to make correct function of the module.

Description about the Consultancy:

"Design and Fabrication of Material Handling Transporter". The transporter for material handling two wheeler attached by trolley is based on the principle of Segway. We need to reduce mechanical efforts of workers for material handling effortlessly. The main purpose of material handling transporter is to ensure that the right amount of material is carefully delivered to the desired destination at the right time and at minimum cost. The main objective was to build a vehicle of capable of transporting weight of a person and materials up to 150 kg and capable of travelling to some distance with varying speed. The operator's controls are supposed to be natural movements forward, backward in combination with tilting the handlebar. Sideways should be the only operator input required to operate the vehicle. This project take into consideration the material used with minimum possible cost.

Description about the Consultancy:

Paver Block Demoulding Machine is generally used demoulding purpose for paver block making process. Paver block is one of the most popular flexible surface treatment options for exterior pavement applications. The demoulding machine consists of single phase vibration motor. The 6000HZ frequency of amplitude vibration is created by rotating cam with a help of motor. Due to this vibration mould box is separated from mould. Advantages - high performance, high durability, platform will not be damage, power consumption low and working method is easy

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

In agriculture drip irrigation work, there is a need of small size digging. Nowadays JCB and man power is used for digging process. Using of JCB is more expensive in cost wise and time wise. It is not suitable for small depth and width of digging process in drip irrigation work. Using of man power also more expensive in cost wise and time wise. This wheel trencher attachment is very helpful to farmers for drip irrigation digging, underground pipeline works and any other small digging process. Man power, time and cost of digging are reduced by using this wheel trencher attachment

Description about the Consultancy:

Differently disabled people face many hardships in life. Mobility of the Physically Challenged people is a great concern of the society. A tricycle having both front and rear wheel drives, for hand motion and electric power respectively. Hand motion we prefer the mechanism is crank and lever mechanism is it better compared as pedal operated to manually run a tricycle. Alternative way of run tricycle we use to propelled a wheels for the purpose of lower or higher speed movement of chair which will be convenient for the physically challenged. This work utilizes the power from the lead acid batteries which are rechargeable.

Description about the Consultancy:

The fuel cell is an electrochemical device used for generating the electrical power using Hydrogen and Oxygen. The experiment has been conducted in the Fuel Cell Research lab at Nandha Engineering College. In this experimental work, the serpentine flow fields have been taken on both anode and cathode sides and the single cell fuel cell was assembled with membrane electrode assembly. The proper flow and operating parameters have been set. The single cell has been connected to the fuel cell test station. The power output values have been taken for different voltages by the students under the monitoring of faculty member..

Description about the Consultancy:

The **Design of Automatic Lubrication system** is used to automate the Embroidery unit in the Garment industry to improve the Machine performance and save the lubricant cost.

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The proposed automated control system in a Embroidery unit is comprised of a Oil Storage cn that feeds through the Nozzle which is controlled by the automatic opener based on the timer programming form the ports of Microcontroller. The lubricant is injected to the various bearings in the machine periodically through the system which prevents the excess lubricant from finding its way onto the finished product, the plant floor or other work surfaces. This results in fewer rejections, cleanup and disposal problems, as well as less waste of lubricant. And of course, all of this positively affects the company's bottom line. Another benefit of an automated lubrication system is worker safety. It becomes unnecessary for employees to engage in the potentially hazardous practice of manually applying lubricant while machinery is operating or in hazardous, difficult-to-reach locations.

Description about the Consultancy:

The **Automatic Water Level Control System** is used to monitor the water level in over head water tank automatically. Based on the level of water, the proposed work will give frequent alert to the sump operator and also turn off the motor to avoid the overflow:

1. Automatic water level control system
2. Water level Message alert system

A float sensor or float switch is used to detect the level of liquid within a tank. It is also called as magnetic float sensor or float switch as its working is same as of switch. Magnetic float sensor is an electromagnetic ON/OFF switch. It senses the level of water present in the tank by making switching connection. Float sensor is working on the same concept as reed switch. When we outfit sensor in an empty tank the switch position is at bottom but as water starts filling up switch position rises up which generates magnetic field for the reed switch. So simply, when water level goes down sensor break the circuit and the water pumping motor will turn on, while when level goes up sensor make the circuit and series the water pumping motor will turned off. Simultaneously the water level information in the overhead tank is frequently sent to the sump operator.

Cheque no: 117117, 24.3.2023
Amount: 40,000/-
Acc. no: 6715223569

Description about the Consultancy:

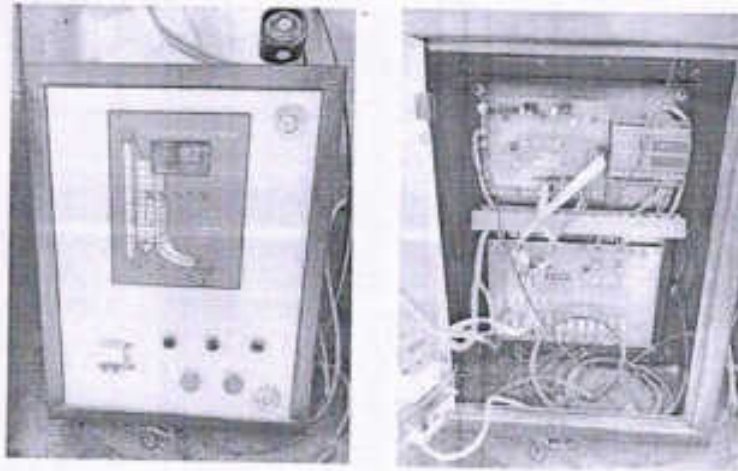

The **Paddy Dryer Control Panel Establishment and Pressure Boiler Monitoring System** is used to automate the dryer unit operation in the rice production industry comprised with a boiler unit:

1. Temperature Control and Alert system
2. Automatic fan speed regulation system
3. Paddy feed Elevator control system

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The proposed automated control system in a rice mill is comprised of a steam boiler that feeds through a steam-hot air heat exchanger, hot air via a blower into a grain dryer, the grain being fed in and out of the dryer through inlet and outlet ports, temperature sensors in the hot air path, a sensor pair to limit the steam motor valve opening and closing; a piston valve to operate steam to fully open and fully closed positions respectively and a drop valve to remove condensate water from the heat exchanger. The whole system is governed by an automated panel operated by signals from the above sensors and processed by microcontroller. Boiler controllers monitor the operation of a boiler and check for abnormalities or dysfunctions. The aquastat of the controller controls water temperature to prevent the boiler from firing too often. Controllers monitor water levels and the feed rate to prevent low water levels, which can cause a boiler to overheat and fire too often. In this consultancy work the above said two modules are designed and implemented in a real time manner to enrich the rice production.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

The **CCTV Camera Surveillance System**: CCTV stands for closed-circuit television and is commonly known as video surveillance. "Closed-circuit" means broadcasts are usually transmitted to a limited (closed) number of monitors, unlike "regular" TV, which is broadcast to the public at large. CCTV networks are commonly used to detect and deter criminal activities, and record traffic infractions, but they have other uses. CCTV (closed-circuit television) is a TV system in which signals are not publicly distributed but are monitored, primarily for surveillance and security purposes.

CCTV Cameras work by capturing a constant sequence of images that are then transmitted by cable or wirelessly to a display monitor where the sequence of images is demonstrated as video footage. A CCTV system therefore refers to all aspects and components that make up the system, such as the camera, wiring, video footage storage (via the cloud or digital video recorder), monitors, access control and general system management. You would want to use a CCTV system to increase the security of your business premises and have surveillance on key areas at any one time. This would be particularly useful for large premises or one that holds valuable equipment, products or information. As well as recording video footage, a CCTV system can also notify you if there is activity or movement on a certain camera at a set time. For instance, in the dead of night whilst the business premises in closed and employees have gone home. This notification could indicate that someone may be about or looking to break-in to your site.

Although a CCTV system can be used for the surveillance of on-site activity, during and out of working hours, it can also be used to help identify wanted criminals, as well as act as a deterrent to potential intruders. Consisting of at least one camera, lens, monitor and recorder, a CCTV system can be scaled up or down depending on the size of area wanting surveillance. CCTV works by the camera or cameras taking a constant sequence of images that are then transmitted by cable or wirelessly (depending on the chosen system type) to the recording device and then on to the display monitor, which enables an individual to see the sequence of images as video footage.

Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

This consultancy work titled as Furniture shop management system is a web application that allows users to check the various furniture's available in the online furniture store. Furniture's provides a list of furniture products displayed online in various models and designs.

Users may browse these products through online as per categories like living room, office furniture, tables, chairs, beds etc. If the user likes a product, they may add it into their shopping cart. So we created this system for the convenience of the consumers of this specific shop. Not only for the customer but also for the owner's convenient for it's easier selling of the furniture product, saves it's time and effort in inventory for the availability of their furniture products.

Description about the Consultancy:

"Resto Bakes and Event Management System" is a software application that is designed to organize and look-after the various processes involved in the various small-scale industries that are coming under the ownership of **Lakshmi Bakery**. They are online cake shop management, food ordering system and event management. Our system helps the group of food industries to operate meritoriously and effectively by providing better communication and service between the customer and the retailer. Separate systems ought to be developed for handling different customers. This helps them to give a customized experience to the client efficiently. Since our system will gradually increase the turn-over of the company by increasing its performance and customer gratification.

Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

This consultancy work titled as Furniture shop management system is a web application that allows users to check the various furniture's available in the online furniture store. Furniture's provides a list of furniture products displayed online in various models and designs.

Users may browse these products through online as per categories like living room, office furniture, tables, chairs, beds etc. If the user likes a product, they may add it into their shopping cart. So we created this system for the convenience of the consumers of this specific shop. Not only for the customer but also for the owner's convenient for it's easier selling of the furniture product, saves it's time and effort in inventory for the availability of their furniture products.

Description about the Consultancy:

The project is concerned with developing a web site which becomes both e-commerce portal as well as administration site for Construction Company. The administrator adds materials, suppliers, customers, purchase, sales, stock and analysis reports along with employee details maintenance. The customer can provide building requirements like how many rooms, no of floor, room size, no of kitchen shelf, indoor steps or outside steps, tiles or normal floor, outside space and other requirements. The admin approves and designs the building plan by engineer according to user need. The required material for that plan is entered by admin. The admin manages purchase, payment, stock maintenance along with project tracking status. The admin analyze the data based on year wise based on products. The new approach helps to improve the sales volume by billing through the web site. During purchase and sales billing along with stock details are handled. Billing is made from more than two points of sale terminals. In addition, during sales entry, if the item stock is reduced below the re-order level, then an alert email is sent to administrator id. Like wise, if new items are added, then the details are mailed to all customers' mail id. Also, Pending amount is mailed to customer mail id during receipt entry. The administrator views various reports such as category, items, customers list, sales billing and stock level. Search options and report options are provided for all kind of transactions.

Description about the Consultancy:

Needle: It is a principal element of the knitting machine. Its help the yarn to create a loop. And by this way fabric are produce. Prior to yarn feeding the needle is raised to clear the old loop from the hook, and received the new loop above it on needle stem. The new loop is then enclosed in the needle hook as the needle starts to descend. If the needle breaks, a hole will be created in the garment. To avoid this camera is fixed near all the needles which intimates the breakage of needles so that loss can be avoided.

Date: 28-03-2023

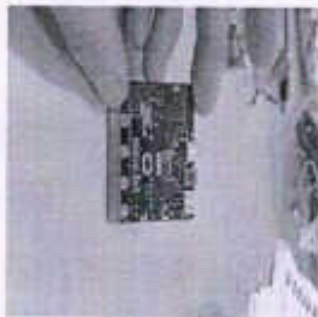

Description about the Consultancy:

These days, beginner-friendly microcontrollers are easy to use and program with just a laptop, a USB cable, and some (free) open-source software. Microcontroller programming is just a part of digital system design. To become a good professional, one has to know many other things apart from programming - mathematics, physics and electronics.

Installation (or setup) of a computer program (including device drivers and plugins), is the act of making the program ready for execution. Installation refers to the particular configuration of a software or hardware with a view to making it usable with the computer.

VLSI is suitable for use today in the digital hardware design process, from specification through high-level functional simulation, manual design and logic synthesis down to gate-level simulation. VLSI tools usually provide an integrated design environment in this area.

We programmed Microcontroller and VLSI for the projects in organization and Installed systems and serviced in some client offices.

Description about the Consultancy:

This product uses three NE5532 high-low bass adjustment preamp and subwoofer amplifier circuit, and four high-power TPA3116 as the core. The IC has a power of 100WX1+50WX5 at DC24V 4 ohms. Recommended in the range of DC12-20V. Parameters Supply voltage: DC12-25V, current 3A or more (Without power supply) Output power: subwoofer 100WX1, front channel 50WX2, center channel 50WX1, surround channel 50WX2 Bluetooth version: Bluetooth 5.0 NOTE: Please connect with RCA input if you want to build 5.1 sound system it only has 2.1 channel output if you connect with Bluetooth Dimensions: 180*51*137mm (excluding knob and rear terminal size) Features: 1. 5.1 channel Joint Debugging + Independently adjustable 2. This product is four power TPA3116 7498E core. in DC24V/4? power reached 100WX1 + 50WX5 3. TPA3116 is a double bridge connected load (BTL) class-D audio amplifier chip, using a single power supply, with small size, high efficiency, high power, etc. 4. Supply voltage DC12V-25V (voltage recommended not exceed 24V) Heat is small, efficiency can reach above 90%. You can use switching power supply, also suitable for battery-powered. 5. Bluetooth only connect FR and FL 6. Suitable for home amplifier or car amplifier 7. There are five potentiometer on board, adjust the volume on each channel, namely: 1. FCH (left and right front channel adjustment) 2. CEN CH (center channel adjustment) 3. SCH ((left and right surround channels regulate) 4. SB CH (subwoofer channel adjustment) 5. the biggest potentiometer is 5.1-channel Unified adjustment potentiometer. Package included: 1Pcs 5.1 TPA3116 Amplifier (without power supply)Photo Proof:

Description about the Consultancy:

The main function of a CCTV camera is to capture light and convert it into a video signal. At the core of a CCTV camera is a CCD sensor (Charge Coupled Device). This converts light into an electrical signal. Signal processing converts the electrical signal to a video signal that can be displayed on screen or recorded.

Date: 28-3-2023

Date: 22/03/2023

Description about the Consultancy:

As the prevalence of diabetes has increased worldwide in recent years, an increasing number of patients are experiencing discomfort and infections as a result of the invasive design of most commercial glucose metres. Technology for non-invasive blood glucose monitoring has drawn attention from researchers around the world and is a novel approach that may help a lot of patients. Based on the detection principle, this paper divides non-invasive blood glucose detection technology into three categories: optics, microwave, and electrochemistry, and examines recent research developments and significant challenges. The technology includes areas linked to medicine, materials, optics, electromagnetic waves, chemistry, biology, and computational science. Electrochemistry and optics in non-invasives, as well as the benefits and drawbacks of non-invasive and invasive technologies, are horizontally contrasted in the idea. In order to discuss the development trend in future research, the current research successes and limitations of non-invasive electrochemical glucose sensing systems in continuous monitoring, point-of-care, and clinical settings are also emphasised. The market for non-invasive blood glucose tracking will become more competitive as wearable technology and transdermal biosensors continue to advance quickly. The technical assistance in development of the project given to the company as a consultancy work

Description about the Consultancy:

Home automation is a network of hardware, communication, and electronic interfaces that work to integrate everyday devices with one another via the Internet. Each device has sensors and is connected through WiFi, so you can manage them from your smart phone or tablet whether you're at home, or miles away. This helps us to provide security to our house even when we are out of station.

In this work we had connected a CCTV camera outside and inside the house and the controller for all electronics equipments, electrical components, so that we can switch on and off from other rooms or outside the house. It uses Blynk software to connect the data to the cloud and control all the devices. It also gives alarm if any unknown person enters the house.

Description about the Consultancy:

A cooling tower is designed to remove heat from a building or facility by spraying water down through the tower to exchange heat into the inside of the building. Air comes in from the sides of the tower and passes through the falling water. A cooling tower is a heat removal device that uses water to transfer process waste heat into the atmosphere. Likewise, an industrial cooling tower operates on the principle of removing heat from water by evaporating a small portion of water that is recirculated through the unit. Air enters the tower beneath the fill and is drawn up vertically into the tower. Above the fill, hot water is introduced through low pressure spray nozzles to divide the hot water over the surface of the fill in fine droplets. The cooling air draws heat from the water as it progresses to the bottom of the tower. A cooling tower is designed to remove heat from a building or facility by spraying water down through the tower to exchange heat into the inside of the building. A nominal cooling tower ton is defined as the capability to cool 3 GPM (0.19 lbs) of water from a 95°F (35.0°C) entering water temperature to an 85°F (29.4°C) leaving water temperature at a 78°F (25.6°C) entering wet-bulb temperature. The cooling tower's capacity is the product of the mass flow rate of water, specific heat, and temperature difference. This can also be expressed as heat rejected in kCal/hr (Btu/h). Evaporation loss. This is the amount of water that is evaporated during the cooling process.

Description about the Consultancy:

The project is concerned with developing a web site which becomes both e-commerce portal as well as administration site for Coal trading Company. The administrator adds materials, suppliers, customers, purchase, sales, stock and analysis reports along with employee details maintenance. The customer can provide requirements and the admin approves and dispatches the materials according to user need. The admin manages purchase, payment, stock maintenance along with billing. In addition, during sales entry, if the item stock is reduced below the re-order level, then an alert email is sent to administrator id. The administrator views various reports such as category, items, customers list, sales billing and stock level. Search options and report options are provided for all kind of transactions.

Description about the Consultancy:

The Core Banking Solution System essentially includes deposit, loan and credit processing. Among the integral core banking services are floating new accounts, servicing loans, calculating interests, processing deposits and withdrawals, and customer relationship management activities. The banking automation like CBS (Core banking solution) system and its impact on KPIs (key performance indicator) such as Total Deposit, Total Advances, Investment, Profit/Profitability, Working Capital, Net NPA %, Emp. Productivity, Share Capital, Net Worth, Reserves, business turnover, CD ratios etc. before the CBS (Core banking solution) system adoption and after the CBS (Core banking solution) system analysis.

Customers of the banks are the real stakeholders and getting satisfied with improved services by banks. The study gives the facts about CBS benefit and it could be present in a very systematic way by proper representation, banks are adopting the CBS for efficient banking operation and anytime, any type, any place with any bank and customers get benefited with efficient service provided by the bank.

Description about the Consultancy:

An awareness program for turmeric farmers conducted different place in erode district and covered the following topic:

Introduction to Turmeric Farming: The program started with an overview of turmeric farming, including its history, cultivation practices, and benefits. It can also cover the current market trends and demand for turmeric.

Soil Preparation and Planting: The program covered the various techniques involved in soil preparation, including plowing, leveling, and soil testing. It can also cover the best planting practices, including the optimal time to plant, the spacing between plants, and the planting depth.

Crop Management: The program also cover the different techniques involved in crop management, such as irrigation, fertilization, pest and disease control, and weed management.

Harvesting and Post-Harvest Handling: The program covered with the best practices involved in harvesting turmeric, including the optimal time to harvest, the techniques involved in harvesting, and the storage and transportation practices after harvesting.

Marketing and Business Skills: The program can cover the essential marketing and business skills required for turmeric farming, such as market analysis, pricing, and selling techniques, and developing good relationships with buyers.

Government Schemes and Subsidies: The program included government schemes and subsidies available for turmeric farming and how farmers can benefit from them.

Respected Sir

I am writing to express my sincere gratitude to you for organizing the awareness program for turmeric farmers in Erode district. The program was held in five different locations over duration of four months and provided farmers with invaluable knowledge and skills to improve their agricultural practices and increase their income.

I also wanted to express my appreciation for the generous remuneration of Rs. 67,000 provided for your services as a trainer for the program, including the travel allowance. The program covered a wide range of topics, including crop management, pest control, harvesting, and post-harvest handling. The information shared was relevant and practical, and it will undoubtedly help farmers to increase their yield, quality, and profitability significantly. I was also impressed with the program's organization and coordination. The trainers and support staff involved were professional, knowledgeable, and dedicated to ensuring that the program's objectives were met. The program's success is a testament to the hard work and commitment of everyone involved.

I look forward to future collaborations and initiatives aimed at promoting sustainable agriculture and rural development.

Thank You

Sincerely,

Erode
28.10.22

To

The Principal,
Nandha Engineering College,
Erode- 638052.

Respected Sir

I am writing to express my interest in organizing an awareness program for turmeric farmers in Erode district. As you may know, turmeric is a valuable crop with a significant economic impact in our region. However, many farmers are not aware of the best practices for cultivating turmeric and do not have access to the latest information on how to increase yields and improve the quality of their crops.

I would like to propose a program that will bring together turmeric farmers from the region to share their experiences and learn from experts in the field. The program will include workshops, training sessions, and field visits to demonstrate best practices for cultivating turmeric. We will also invite experts to share their knowledge on topics such as soil management, pest and disease management, latest post-harvest technology and marketing strategies.

I believe that this program will be of great benefit to the turmeric farmers in our region, and I am confident that it will help them increase their yields, improve the quality of their crops, and increase their income. I am willing to take the lead in organizing and coordinating this program. I request your support in organizing this program and providing the necessary resources and assistance. Thank you for considering my request, and I look forward to hearing from you soon.

Thank You

Sincerely,

Description about the Consultancy:

The agriculture crop monitoring system has been developed using IOT. To improve crop productivity efficiently, it is necessary to monitor the environmental conditions in and around the field. The parameters that must be properly monitored to enhance the yield are soil characteristics, weather conditions, moisture, temperature, etc. The Internet of Things (IOT) is being used in several real-time applications. The introduction of IOT along with the sensor network in agriculture has refurbished the traditional way of farming. Online crop monitoring using IOT helps the farmers stay connected to their fields from anywhere and anytime. Various sensors are used to monitor and collect information about the field conditions. Collectively, the farm condition is sent to the farmer through GSM technology. The following hardware and software system used to develop system. Crop monitoring is done in agricultural fields, where sensors are used to collect information in the agricultural field. The different sensors used are a temperature and humidity sensor and a soil moisture sensor. The information collected by the sensors is sent to the Arduino microcontroller, the ATmega328. The collected information can be displayed on an LCD display. A GSM module relates to the microcontroller through which the message about the farm condition is sent to the authorized person.

Hardware System

- Arduino microcontroller AT mega328
- Soil moisture sensor YL-69
- Temperature and Humidity sensor
- GSM Module
- WiFi Module
- MAX 232

Software used

- Arduino

Description about the Consultancy:

The CCTV Servicing report presents the analysis of the maintenance records over the first seven months of a leased operation. Inspect cables and connectors and cable protection between pole and pan/tilt unit or camera enclosure for abrasions, cracks or deterioration. 2. Inspect concrete poles for hairline cracks wider than 1mm and metal poles for any cracks, mechanical damage or corrosion. 3. Verify operation of pan/tilt, zoom and focus using appropriate tool or via RESCU control room operators. Ensure cables do not interfere with camera movement.

We installed automated RO system with the capacity of 2000 litre and service the automated RO system control board.

Description about the Consultancy work:

In recent years, with the rise of global diabetes, a growing number of subjects are suffering from pain and infections caused by the invasive nature of mainstream commercial glucose meters. Non-invasive blood glucose monitoring technology has become an international research topic and a new method which could bring relief to a vast number of patients. We have developed a "Non-invasive continuous glucose monitoring kit" based on impedance spectroscopy (EIS). This device will measure the glucose level of patients based on the skin resistance. This kit contains a sensor, a measurement system, and an estimation algorithm.

Description of the consultancy work:

Sleep apnea is a common condition in which you're breathing stops and restarts many times while you sleep. This can prevent your body from getting enough oxygen, which will lead to several health issues. So we have done a IoT based real time sleep monitoring application "Mobile CPAP for Apnea kit". It will allow the user to measure different indexes of sleep and will notify them through a mobile application when anything odd occurs. The system contains various sensors to measure the electrocardiogram (ECG), heart rate, pulse rate, skin response, and SpO2 of any person during the entire sleeping period. It can measure the indexes of sleep without disturbing the person and can also show it in the mobile application simultaneously with the help of a Bluetooth module. The system has been developed in such a way that it can be used by every kind of person. Multiple analog sensors are used with the Arduino UNO to measure different parameters of the sleep factor.

Description about the Consultancy work:

A PC-based Spirometer System is a kit to measure and monitor the lung vital capacity of patients. It is fast and easy to use device. The accurate and reliable spirometry measurements make it the perfect tool for asthma management, early detection of acute respiratory disorders as well as pharmaceutical trials. It is a simple system that provides accurate and reliable Spirometry measurements. Optimal for pulmonary analysis, asthma management, early detection of acute respiratory disorders, as well as use in pharmaceutical trials.

Description about the Consultancy:

The Oil Expeller is a screw type machine, which presses oil seeds through a caged barrel-like cavity. Raw materials enter one side of the press and waste products exit the other side. The machine uses friction and continuous pressure from the screw drives to move and compress the seed material. The oil seeps through small openings that do not allow seed fiber solids to pass through. Afterward, the pressed seeds are formed into a hardened cake, which is removed from the machine. Expeller pressing (also called oil pressing) is a mechanical method for extracting oil from raw materials. The raw materials are squeezed under high pressure in a single step. When used for the extraction of food oils, typical raw materials are nuts, seeds and algae, which are supplied to the press in a continuous feed. If we scale down the Industrial Oil Expeller we can see that the main workings of the expeller is the helical thread in the barrel that creates a large amount of force pressing the raw material in the process of expelling the oil.

Summary of survey:

- Needs oil expeller which is suitable for small-medium businesses where the total cost of setting up and running the machine is low. (Because, the profitability of oil processing depends on reducing the capital and operating costs as much as possible).
- Less number of low cost machines is available but yet it must be very efficient in expelling oil.

Objectives:

The objectives of the present study are as given below:

1. To design the low cost groundnut expeller
2. To fabricate groundnut expeller
3. To check the performance of developed expeller.

Methodology:

The methodology adopted for this project as follows:

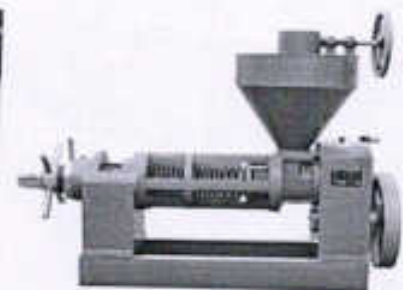

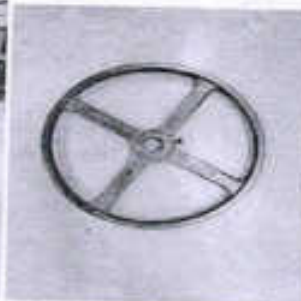

1. Design of frame & other parts.
2. Fabrication of frame & other parts.
3. Selection of rotor for the equipment.

Expected outcomes:

The work will be focused to achieve the following deliverables:

- Design and Fabrication of groundnut Oil expeller.
- The working model enables to reduce the heating of the expeller.
- The project emphasis on fabricating a cost effective, which can be affordable to poor farmers.

Description about the Consultancy:

The challenges, issues and solution associated with hybrid PV and wind power generation. The hybrid power generation output is integrated with off-grid. AC-DC and DC-AC converters are used to synchronize the frequency of the hybrid system with common bus bar. The analogous operation of the system enhances continuous supply to the load. In offshore areas, (HAWT) Horizontal axis wind turbine mechanical contact reliability has broken due to high speed rotations. In proposed system, (VAWT) Vertical axis wind turbine is used to generate low power in low speed. In this work sunny island, sunny remote control and battery bank are used.

Description about the Consultancy:

The CCTV Servicing and OS Installation is used in the Especially look for **IP cameras and install HD analog CCTV cameras**, wired depending on the range of the cable pull or conduits. People place CCTV cameras in their Industry, villas, homes, and apartments. Mostly to keep an eye on their nannies while the landlords work at their offices during the day.

Depending on the CCTV system you chose, you'll either have a network video recorder or an on-site recording system. The software setup is similar for both, but on-site recording systems need physical recording equipment, typically a DVR.

We installed 1TB hard disk drive and upload the windows operating systems for five computers.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

The CCTV Servicing and Server OS Installation issued in the Especially look for IP cameras and install HD CCTV cameras, wired depending on the range of the cable pull or conduits. People place CCTV cameras in their Industry, villas, homes, and apartments. Mostly to keep an eye on their nannies while the landlords work at their offices during the day.

Depending on the CCTV system you chose, you'll either have a network video recorder or an on-site recording system. The software setup is similar for both, but on-site recording systems need physical recording equipment, typically a DVR.

We installed 1TB hard disk drive and upload the operating systems for few computers in organization.

Description about the Consultancy:

The future other digital technologies shall complement CCTV to create a simultaneously more autonomous proactive surveillance process. These technologies include facial recognition linked cameras, intelligent hardware and IoT. Home automation is a network of hardware, communication, and electronic interfaces that work to integrate everyday devices with one another via the Internet. Each device has sensors and is connected through WiFi, so you can manage them from your smart phone or tablet whether you're at home, or miles away. This helps us to provide security to our house even when we are out of station.

In this work we had connected a CCTV camera outside and inside the house and the controller for all electronics equipments, electrical components, so that we can switch on and off from other rooms or outside the house. It uses Blynk software to connect the data to the cloud and control all the devices. It also gives alarm if any unknown person enters the house.

Cheque no: 171145
date: 29.3.2023.

Description about the Consultancy:

The electronic components such as fan and light were automated .It is made such that can be operated using remote control. Along with automation CCTV cameras were installed based on the customers requirement the system was made cost effective. The online monitoring of CCTV system is based on the broad band connection. This is because the DVR (Digital Video Recorder) is compatible with Ethernet port for internet connectivity. Here our task was to connect internet to the digital video recorder via Jio FI device.

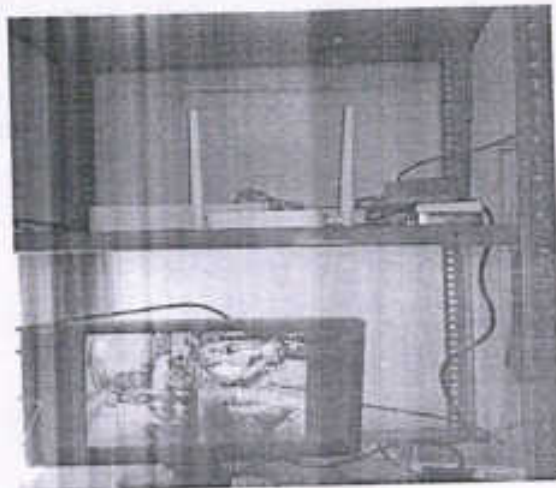

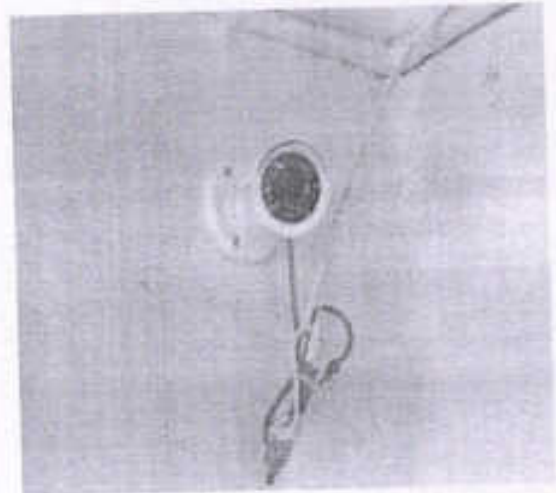

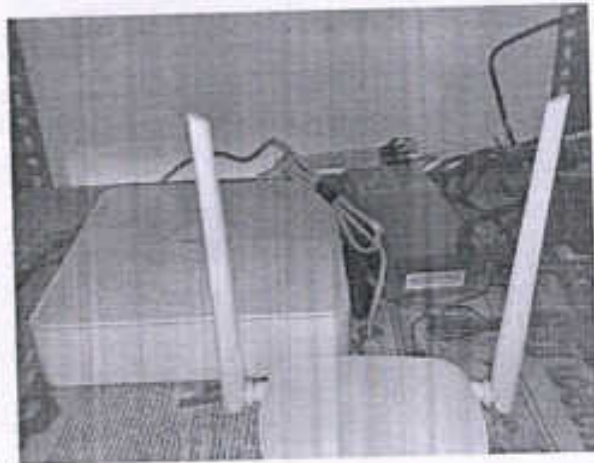

Here we use the following devices to solve the problem.

1. Jio FI device.
2. TENDA Wireless Repeater.
3. DVR with Ethernet port.

The Jio FI device will provide the internet via hotspot. The TENDA router will act as wireless repeater and the repeater have one Ethernet port. By configuring the wireless repeater we can access the internet via Ethernet port. The Jio FI device and Tenda wireless repeater both have the WPS system for internet protection. The system is easy to access and the bill amount for internet connectivity is reduced. For HD (High Definition) live streaming of the video (Via Mobile) here we use IVMS4500 application.

Cheque Issue details:
Cheque no: 17150 Date: 29-3-2023
Amount: 61,000/-

Description about the Consultancy:

We installed the drip irrigation system on a 2-acre farm owned by Mr. Thangavelu at Chinniyangoundan Valasu.. we bought all the necessary materials such as drip lines, emitters, connectors, filters, and other components required for the installation then proceeded to install the water source, which included a pump, filter, and pressure regulator. we also installed a backflow preventer to ensure that the irrigation water did not contaminate the main water supply. He then laid out the drip lines, installed the emitters at the base of each plant, connected the lines, and tested the system for leaks and proper flow rate.

The installation was successful, and Mr. Thangavelu has reported a significant increase in crop yields as a result of the drip irrigation system. Additionally, the system has reduced water usage by approximately 50%, resulting in significant cost savings for Mr. Thangavelu. Overall, the installation of the drip irrigation system has been a great success, and we are proud of Mr. Thangavelu's initiative and dedication to sustainable agriculture practices. We hope that this project serves as an inspiration to other farmers to take up similar initiatives and make a positive impact on the environment and the community.

Dear Principal

We hope this letter finds you in good health and spirits. As you are aware, Sai Irrigation is committed to promoting sustainable agricultural practices in our community. To this end, we would like to request your support in installing a drip irrigation system for the farmers in the area. We have been working closely with the agricultural faculty at your institution, and they have identified several farmers who would greatly benefit from the installation of a drip irrigation system. This system would help them conserve water, reduce fertilizer and pesticide use, and ultimately increase their crop yields and incomes.

We understand that your institution has limited resources, but we believe that the benefits of this project would be substantial and long-lasting. In addition, we would be willing to contribute financially to the installation and maintenance of the system. We would be grateful if you could consider our request and help us bring this project to fruition. We look forward to hearing back from you soon.

Dear Pradeep Kumar

We would like to extend our sincerest appreciation for the exceptional work you and your team did in successfully installing the drip irrigation system in the field of a Farmer (Mr. Thangavelu). Your expertise in the field of agriculture and irrigation is invaluable in designing and implementing this system, and we are grateful for the dedication and hard work that you put into the project. We are pleased to inform you that Sai Irrigation will be sending an amount of Rs.61,000.00 to the Principal's account shortly, as agreed upon for the installation and maintenance of the system. We understand the importance of your contribution and the value of your time, and we assure you that this amount will be transferred promptly.

We are confident that this project will have a positive impact on the agricultural sector in our community, and your hard work and commitment to the project have been instrumental in making this a reality. Your efforts have truly made a difference in the lives of our farmers.

Once again, thank you for your exceptional work. We look forward to working with you again in the future.

Description about the Consultancy:

An awareness program for farmers conducted different place in erode district and covered the following topic:

The program will be conducted by a team of experts in the field of organic farming, who will share their knowledge and expertise with farmers. The program will cover topics such as the benefits of organic farming, techniques for maintaining soil fertility, pest and disease management, and the production of organic fertilizers and pesticides.

The program will also include practical sessions where you will learn hands-on techniques for implementing organic farming techniques in fields. The experts will demonstrate how to prepare organic fertilizers, use natural pest control methods, and other techniques that will help you make the transition to organic farming.

We believe that organic farming is the way of the future, and we hope that this program will help you make the transition to a more sustainable and environmentally friendly farming technique.

Respected Sir

We are writing to request your assistance in appointing a chief guest for our upcoming seminar on organic farming. As you may know, our organization has been working tirelessly to promote sustainable agricultural practices in our community, and we believe that educating people on the importance of organic farming is a crucial step in achieving this goal. To this end, we have organized a seminar on organic farming.

We would be honored if the Department of Agricultural Engineering at your institution could appoint a chief guest to address our audience at the seminar. We believe that someone with experience and knowledge in sustainable agriculture would be an ideal candidate to inspire and educate our attendees on the importance of organic farming practices.

We have prepared an informative and engaging program for the seminar, and we would be delighted if a representative from your esteemed department could be part of it.

We hope that you will consider our request and help us make this seminar a success. Thank you for your time and consideration.

Sincerely,

Ms. Chitra

Respected Sir

I would like to express my sincere gratitude to you for appointing a distinguished guest speaker Mr. M. Rabi ahemed from the Department of Agricultural Engineering to address our recent seminar on organic farming. The valuable insights and knowledge shared by the chief guest were truly enlightening and inspiring. The seminar was an excellent opportunity for farmers to gain a better understanding of the benefits and challenges of organic farming. The presence of the chief guest added immense value to the event, and we were honored to have someone with such a wealth of experience in the field of agriculture share their expertise with us.

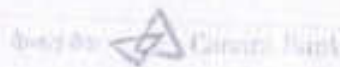

The chief guest's presentation was engaging, informative, and thought-provoking, and it generated a lot of interest and enthusiasm among the attendees. Their expertise and practical knowledge of organic farming techniques were impressive, and we all learned a lot from their insights.

It was an excellent opportunity for our farmers to learn from a renowned expert in the field of agriculture, and we are grateful for the experience.

Thank you.

Sincerely,

Ms. Chitra

ACCEPTANCE LETTER

I am pleased to inform the acceptance of consultancy work to the Department of Biomedical Engineering, Nandha Engineering College, Erode for the “**Automated Obstructive Sleep Apnea Device**” with a total amount of Rs. 25,000/-. Your duties and assignments for this will be described to you by the supervisor during the orientation. In this regard the support from the **Mr. A. Amarnath Prabhakaran**, Assistant Professor – ECE & **Mr.A.Srithar** Assistant Professor – BME, Nandha Engineering College, Erode is required for 6 months. This offer is contingent upon the completion of the formalities of our company. We look forward to seeking you on the start of the work by end of this month.

for Prashan Medical Technologies

Mr. Boopathi Sakthivel

Founder, CEO & Biomedical Engineer

Prashan Medical Technologies, Coimbatore

Description about the Consultancy:

The medical equipment/instrument used in hospitals for monitoring and treatment of patients also require calibration in order to have confidence in their functioning and operation. Auto-CPAP machines used in the treatment of obstructive sleep apnoea (OSA) are designed to vary the treatment pressure automatically in order always to apply the actually needed pressure. Consequently they should be able to achieve at least identical therapeutic effects as conventional constant pressure CPAP with a lower mean treatment pressure. The pressure sensors inside the CPAP may lose their calibration and therefore that a periodic check and calibration would be required, even though the device is declared as a self-calibrating.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The mix design of M25, M30 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used for 0.47 and 0.46 respectively. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement.

Description about the Consultancy:

Smart CCTV camera surveillance system is to enhance the CCTV camera based security systems, which presently exist in different places. The Security System by using CCTV Camera is designed using wireless technology. The use of a surveillance system for image detection is becoming more important. An embedded surveillance system is frequently used in the home, office or factory for image processing of the surveillance system and also for traffic monitoring. The advantages of this systems are low power consumption and low cost.

This system works in two modes: Manual mode and automatic mode. Control unit consist of micro controller, LCD to see the messages, buzzer and LED for indication, Keypad will be used in manual mode for the controlling movement of the CCTV camera. MAX 232 IC will be used for voltage conversion between RF module and microcontroller.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

On a 3-acre farm belonging to Mr. Periyasamy in Bhavani, Erode (Dt.), we installed a drip irrigation system. We obtained all the required materials, such as drip lines, emitters, connectors, filters, and other components, and proceeded to install the water source, including a pump, filter, and pressure regulator. Additionally, we installed a backflow preventer to ensure that the irrigation water would not contaminate the main water supply. Next, we arranged the drip lines, mounted the emitters at the base of each plant, connected the lines, and examined the system for leaks and appropriate flow rate.

The drip irrigation system was successful, and Mr. Periyasamy reported a significant improvement in crop yields. In addition, the system reduced water usage by approximately 50%, resulting in substantial cost savings for Mr. Periyasamy. Overall, we are pleased with Mr. Periyasamy's initiative and commitment to sustainable agriculture practices, and we believe that this project can inspire other farmers to undertake comparable initiatives to have a positive impact on the environment and the community.

Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

We installed the **Inventory and Financial Management Software** for Sri Prakash agency, Bhavani . The consultancy services provided for the installation of an inventory and financial management software for Sriprakash Agency aim to ensure a smooth and successful implementation of the software. The consultancy team will offer expertise and guidance throughout the installation process, ensuring that the software is tailored to the specific needs of Sriprakash Agency and aligned with industry best practices. Consultancy on the installation of inventory and financial management software for an FMCG distributor, like Sriprakash Agency, involves industry-specific expertise, needs assessment, software selection, customization and integration, installation and data migration, training and change management, process optimization, reporting and analytics, as well as ongoing support. We will provide ongoing support to Sriprakash Agency, including resolving technical issues, software updates, and staying updated with industry trends and evolving requirements. They will be a reliable partner in the long-term success of Sriprakash Agency's inventory and financial management processes.

Subject: Appreciation for Installation of Inventory and Financial Management Software and Payment Confirmation

Dear Sir

I am writing on behalf of Sri Prakash Agency to express our sincere gratitude for the successful installation of the inventory and financial management software system provided by Nandha Engineering College. We are incredibly pleased with the outcome of this collaboration and would like to extend our appreciation for your exceptional services.

Furthermore, I am writing to confirm that the payment of Rs 75,000 has been successfully transferred to the principal account as per our agreement. Please verify and confirm the receipt of the payment on your end. We value transparency and promptness in financial matters, and we are pleased to have completed this aspect of our partnership.

Please convey our gratitude to all the individuals at Nandha Engineering College department of agricultural Engineering Mr.K. Pradeep Kumar played a part in the success of this project. We deeply value the partnership we have established and look forward to further collaborations in the future.

Thank you once again for your exceptional services.

Sincerely,

K. Pan
