Technical seminar on Importance of Agriculture in Life

Varsnica B and Yogiya S

Department of Agriculture Engineering

Abstract

Agriculture is the process of growing crops by using land, water, seeds and other things. We can't imagine human life without agriculture as it provides basic essentials like food for us to live a healthy life. Along with that, agriculture plays many important roles in our daily life and provides numerous benefits. Thus, it increases the importance of agriculture in our lives. Especially, in countries like India where more than 60% of people rely on the agriculture sector for their livelihood. India is an agricultural-based nation because in our country around 70% of the population depends on the agriculture sector for their livelihood and farming is their main profession. Especially, in the rural areas where you will see most of the people are completely dependent on farming. There are two reasons behind this, first one is they possess the farming ability and knowledge from their forefathers. The second reason is the lack of industries and other sectors in the rural areas as they are only available in urban cities. Agriculture plays a vital role in the national revenue as in developing countries like India farming is the main source of revenue. Comparatively in developed nations where conditions are different and they don't completely rely on the agriculture sector for the revenue. This national revenue helps the nation to grow financially.

Technical seminar on Sustainable Agriculture For food

Fiza Tabassum A and Nishanthini S

Department of Agriculture Engineering

Abstract

As the world population continues to grow, much more effort and innovation will be urgently needed in order to sustainably increase agricultural production, improve the global supply chain, decrease food losses and waste, and ensure that all who are suffering from hunger and malnutrition have access to nutritious food. Many in the international community believe that it is possible to eradicate hunger within the next generation, and are working together to achieve this goal. Extreme poverty and hunger are predominantly rural, with smallholder farmers and their families making up a very significant proportion of the poor and hungry. Thus, eradicating poverty and hunger are integrally linked to boosting food production, agricultural productivity and rural incomes. Agriculture systems worldwide must become more productive and less wasteful. Sustainable agricultural practices and food systems, including both production and consumption, must be pursued from a holistic and integrated perspective. Land, healthy soils, water and plant genetic resources are key inputs into food production, and their growing scarcity in many parts of the world makes it imperative to use and manage them sustainably. Boosting yields on existing agricultural lands, including restoration of degraded lands, through sustainable agricultural practices would also relieve pressure to clear forests for agricultural production. Wise management of scarce water through improved irrigation and storage technologies, combined with development of new drought-resistant crop varieties, can contribute to sustaining drylands productivity.
