Cheque no: 117467 dt: 17.6.2023
Amount: Rs. 31,000/-.

Description about the Consultancy:

Priyanka from the Department of Agriculture suggested the idea **Irrigation installation for coconut Tree** to Ashok , a farmer. Our team of skilled technicians efficiently installed the drip irrigation system for the designated coconut tree plantation area. The installation process included the following tasks:

1. Preparation of the Site:
2. Layout Planning:
3. Material Procurement:
4. Installation:
5. Testing and Adjustments:

I am pleased to report that the drip irrigation system has been operating smoothly since its installation. It is effectively providing a consistent water supply to the coconut trees, ensuring their healthy growth and improved yield.

Dear Priyanka

We would like to extend our sincerest appreciation for the exceptional work you and your team did in successfully installing the drip irrigation system in the Ashok farmer land. Your expertise in the field of agriculture and irrigation was invaluable in designing and implementing this system, and we are grateful for the dedication and hard work that you put into the project. We are pleased to inform you that Sai Irrigation will be sending an amount of **Rs.31,000.00** to the principal's account shortly, as agreed upon for the installation and maintenance of the system. We understand the importance of your contribution and the value of your time, and we assure you that this amount will be transferred promptly.

We are confident that this project will have a positive impact on the agricultural sector in our community, and your hard work and commitment to the project have been instrumental in making this a reality. Your efforts have truly made a difference in the lives of our farmers.

Once again, thank you for your exceptional work. We look forward to working with you again in the future.

Description about the Consultancy:

Dr. Suvain from the Department of Agricultural Engineering suggested the idea of Horti-Silvi farm development to Mr. Sathish Kumar, a farmer. This concept involves developing multi storey system where tree crops grown in multiple levels within a farm. The purpose of this suggestion is to optimize land usage and increase productivity by utilizing the available resource efficiently.

By implementing this system, Mr. Sathish Kumar can overcome limitations posed by limited land availability or unfavorable environmental conditions. By adopting Horti-Silvi system of farm development, the farmer can potentially enhance his agricultural net return with increased crop yields. This innovative approach can contribute to sustainable and efficient farming practices, allowing Mr. Sathish Kumar to meet the demands of an evolving agricultural system.

Respected Sir

I am writing to express my interest to develop a mango farm in Salem district. As you may know, mango is a valuable crop with a significant economic impact in our region. However, I'm working in IT sector, not aware of the best practices for cultivating mango and do not have access to the latest information on how to increase yield and improve the quality of the crop.

I need to know the whole management practices for cultivating mango from production to marketing. Also, willing to grow few other crops along with mango trees in such a way to get revenue round the year, as mango is a seasonal crop yields to a particular months.

I believe that the technical support from your institution will be of great benefit for me, and I am confident that I will help the other farmers to increase their yields, improve the quality of their crops, and increase their income. I am willing to take On Farm training; Hence, I request your support in providing the necessary resources and assistance. Thank you for considering my request, and I look forward to hearing from you soon.

Thank You

Sincerely,

C04 (2023-2024)

Description about the Consultancy:

Mr. T. Bragadeeswaran from the Department of Agricultural Engineering proposed the idea of constructing a large size cistern and implementing water supply management to Mr. M. Arjunraj, a farmer land. Based on the expertise of Mr. T. Bragadeeswaran, recommendations for the construction and management of the large size cistern include selecting an appropriate site, considering the local climate conditions, ensuring proper drainage, and installing an effective filtration system to maintain water quality. This project of constructing a large size cistern and implementing water supply management holds immense potential for Mr. M. Arjunraj, the farmer. By adopting these this system, he had been enhanced his water storage capabilities, improve irrigation practices, and ultimately increased the productivity and sustainability of his farming operations.

Respected Sir

I am writing to express my interest to develop Sugarcane farming in Gobichettipalayam, Erode. For that purpose I need to construct a large size cistern for supplying water to sugarcane growth and achieve maximum crop yield .As you may know, I am not aware of the drip irrigation process and water supply management practices for cultivating Sugarcane and do not have access to the latest information on how to increase yield and improve the quality of the crop.

I believe that the technical support from your institution will be of great benefit for me, and I am confident that I will help the other farmers to increase their yields, improve the quality of their crops, and increase their income. I am willing to take On Farm training; Hence, I request your support in providing the necessary resources and assistance. Thank you for considering my request, and I look forward to hearing from you soon.

Thank You

Sincerely,

C.N.M.

Description about the Consultancy:

Mr.K.Anandhu from the Department of Agricultural Engineering suggested the idea of Drip Irrigation system assembling and processing to Mr. Arjunraj, a farmer. we bought all the necessary materials such as drip lines, emitters, connectors, filters, and other components required for the installation then proceeded to install the water source, which included a pump, filter, and pressure regulator. we also installed a backflow preventer to ensure that the irrigation water did not contaminate the main water supply and tested the system for leaks and proper flow rate.

By this system proper water supply management has been implemented and the system has reduced water usage also resulting in significant cost savings for Mr. Arjunraj. By adopting this system, can increase maximum crop yield of sugarcane. Drip Irrigation system of farm development, the farmer can potentially enhance his agricultural net return with increased crop yields. the installation of the drip irrigation system has been a great success, and we are proud of Mr. Arjunraj initiative and dedication to sustainable agriculture practices.

Description about the Consultancy:

The mix design of M20(20mm aggregate), M20(40mm aggregate), M25 &M30 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.40 to 0.45. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement.

Description about the Consultancy:

The test was carried out to find the mechanical properties of concrete cube specimen for M15, M25 & M30 grade. The concrete was used for construction of collection well wall for southern Railway project. The result shows that concrete mixes are prepared as per the standard procedure. Concrete cube specimens are obtained hundred and twenty percentage strength for 28 days characteristic compressive strength. All the test were carryout as per the procedure of IS code provision. IS516 code book was referred to conduct the compression strength of the specimen.

Description about the Consultancy:

The AC 18 Testing box and 6P6C Common testing module is the device to test the Mobile charger cable functioning in the following three criteria:

1. Open Circuit
2. Short Circuit between two or more cables
3. Wrong terminal in the end connectors

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The charger cable consists of six different wires and the ends are crimped with male micro USB connector. The module is designed to work will all temperature conditions and the microcontroller chip is molded with glue to avoid the malfunction due to humidity. Four different output indications are given to show Pass/Open/Short/Wrong Connection. In this consultancy work the above said two modules are serviced by reprogramming the Controller and replacing the regulators to make correct function of the module.

Description about the Consultancy:

The mix design of M15, M20, M25 & M30 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.40 to 0.45. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement.

Amount : Rs. 15,000/-

Description about the Consultancy:

The test was carried out to find the mechanical properties of concrete cube specimen for M30 grade. The concrete was used for construction of collection well wall for southern Railway project. The result shows that concrete mixes are prepared as per the standard procedure. Concrete cube specimens are obtained hundred and twenty percentage strength for 28 days characteristic compressive strength. All the test were carryout as per the procedure of IS code provision. IS516 code book was referred to conduct the compression strength of the specimen.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The mix design of M20 & M25 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.49 to 0.51. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The mix design of M25, M35 & M45 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.32 to 0.51. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The mix design of M20 & M35 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.48 to 0.41. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement. AS per the IS code recommendation super plasticizer are used as an 1% for the weight of the cement. The main purpose of using plasticizers are to reduce the water content for increasing the harden strength of the concrete at various ages. Also it will reduce the shrinkage cracks are after the 28 hours from the casting of the concrete specimen.

Description about the Consultancy:

The AC 18 Testing box and 6P6C Common testing module is the device to test the Mobile charger cable functioning in the following three criteria:

1. Open Circuit
2. Short Circuit between two or more cables
3. Wrong terminal in the end connectors

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The charger cable consists of six different wires and the ends are crimped with male micro USB connector. The module is designed to work will all temperature conditions and the microcontroller chip is molded with glue to avoid the malfunction due to humidity. Four different output indications are given to show Pass/Open/Short/Wrong Connection. In this consultancy work the above said two modules are serviced by reprogramming the Controller and replacing the regulators to make correct function of the module.

Description about the Consultancy:

Basic ingredients of construction materials are tested as per the IS Standard such as determines the strength of aggregates used in construction and also evaluates the mechanical properties of steel such as its strength and elasticity. The crushing and abrasion test were carried out to find its mechanical properties of the coarse aggregate. Two brand of cement have been tested namely chettinad and coromantal OPC43 grade of cement in which coromantal OPC 43 grade of cement was used to calculate the quantity of cement required to produce the various grade of concrete such as M20, M25, M30 and M35 grade of concrete. And also Fe500D and Fe550D grade of steel reinforcement had tested to find its yield strength, ultimate strength, unit weight and elongation index of rods for 8mm, 10mm, 12mm, 16mm, 20mm and 25mm.

Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The mix design of M20, M25, M30 & M35 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.38 to 0.49. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement. AS per the IS code recommendation super plasticizer are used as an 1% for the weight of the cement. The main purpose of using plasticizers are to reduce the water content for increasing the harden strength of the concrete at various ages. Also it will reduce the shrinkage cracks are after the 28 hours from the casting of the concrete specimen.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

The vibrating table is mainly composed of pressing fixture, table, chassis, vibration motor, shock absorber and other parts. The table and chassis are welded with steel plate and section steel.

It is typically made of a flat metal surface with a vibrating motor mounted underneath. The motor produces high-frequency vibrations that cause the concrete mixture to settle and compact, removing any air pockets and ensuring that the mixture is evenly distributed.

A vibrating table is used to aid the compaction of materials in containers, boxes, and bulk bags. The vibrating action helps materials and products nest closely and settle to reduce product volume to a minimum. This can reduce container size and therefore reduce the cost of transport.

Description about the Consultancy: (Enclose the Copy of Components Purchase Bill)

CCTV (closed-circuit television) is a TV system in which signals are not publicly distributed but are monitored, primarily for surveillance and security purposes. CCTV relies on strategic placement of cameras, and observation of the camera's input on monitors somewhere. Because the cameras communicate with monitors and/or video recorders across private coaxial cable runs or wireless communication links, they gain the designation "closed-circuit" to indicate that access to their content is limited by design only to those able to see it.

Description about the Consultancy:

The consultancy work involves providing expert guidance and support for the installation of remote monitoring, home automation, and security systems. This includes custom system design, product selection, installation assistance, setup, configuration, testing, user training, and ongoing troubleshooting and support.

System Design:

- Assessing the client's requirements and designing a customized remote monitoring, home automation, and security system that meet their needs.

Product Selection:

- Advising on the selection of appropriate devices, sensors, and equipment for the system, taking into account factors such as the size of the property, budget, and specific security and automation needs.

Installation Assistance:

- Offering guidance on the physical installation of cameras, sensors, and other components, ensuring they are positioned effectively for optimal performance.

Network Setup:

- Assisting with the integration of the system into the client's home network, ensuring smooth communication between devices and remote monitoring capabilities.

Configuration and Testing:

- Helping to configure software settings, user interfaces, and automation routines, as well as thoroughly testing all components to ensure they function as intended.

User Training:

- Providing training to the client on how to use and manage the system, including remote monitoring and security protocols.

Consultancy Completion Report
Department of R&D

Sir,

Sub: Appreciation for Installation Support for Effective Monitoring of Smart Home and Security System

I am writing to extend my deepest gratitude for the exceptional installation support provided for the effective monitoring of my smart home and security system on 06.12.2023 and 07.12.2023. The expertise and professionalism demonstrated by your team throughout the installation process were truly commendable.

The seamless setup of the smart home and security system has enhanced the security and convenience of my living environment.

The provision of effective monitoring capabilities, such as remote access to live feeds, timely alerts, and the ability to manage the system from anywhere, has significantly contributed to the safety and efficiency of my home.

The attention to detail and thorough guidance provided during the installation process have empowered me to utilize the system effectively, maximizing its benefits while ensuring the security and privacy of my household.

I extend my deepest gratitude to your team for the outstanding installation support for the effective monitoring of my smart home and security system. The dedication to ensuring a seamlessly integrated and fully operational system has not gone unnoticed, and it is deeply appreciated.

Thank you once again for your exceptional service and commitment to excellence.

Sincerely,

R. Ponrusamy

Description about the Consultancy:

The consultancy work involves providing expert guidance and support for the installation of remote monitoring, home automation, and security systems. This includes custom system design, product selection, installation assistance, setup, configuration, testing, user training, and ongoing troubleshooting and support.

System Design:

- Assessing the client's requirements and designing a customized remote monitoring, home automation, and security system that meet their needs.

Product Selection:

- Advising on the selection of appropriate devices, sensors, and equipment for the system, taking into account factors such as the size of the property, budget, and specific security and automation needs.

Installation Assistance:

- Offering guidance on the physical installation of cameras, sensors, and other components, ensuring they are positioned effectively for optimal performance.

Network Setup:

- Assisting with the integration of the system into the client's home network, ensuring smooth communication between devices and remote monitoring capabilities.

Configuration and Testing:

- Helping to configure software settings, user interfaces, and automation routines, as well as thoroughly testing all components to ensure they function as intended.

User Training:

- Providing training to the client on how to use and manage the system, including remote monitoring and security protocols.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

Troubleshooting and Support:

- Offering ongoing support for any issues or questions that arise after the installation, ensuring the client feels confident in using and maintaining their new system.

Sir,

Sub: Appreciation for Installation Support for Remote Monitoring Home Automation and Security System.

I'm writing to thank you for the excellent installation assistance I received for my home's security system, home automation, and remote monitoring on 04.12.2023 and 05.12.2023. Throughout the installation process, your team's level of professionalism, knowledge, and attention to detail was truly exceptional.

The seamless setup of the remote monitoring capabilities has provided an immense sense of security and convenience.

Being able to remotely access live feeds, receive timely alerts, and manage the home automation devices from anywhere has significantly enhanced the safety and efficiency of our living environment.

Moreover, the thorough guidance on user permissions and access control has empowered us to manage the system effectively, ensuring that the right individuals have the appropriate level of access.

The expertise demonstrated in setting up the process. Knowing that our devices are equipped with the latest features, performance enhancements, and security

By addressing every aspect of remote monitoring and management, your team has indeed gone above and beyond our expectations, and we are grateful for the exceptional service provided.

Once again, I extend my deepest gratitude to you and your team for the exceptional installation support for our remote monitoring home automation and security system.

Sincerely,

(R. PREMA)

Description about the Consultancy work:

SMART WHEELCHAIR NAVIGATION SYSTEM FOR PARALYSIS PATIENT

Fifteen percent of people worldwide are disabled, according to the most recent report from the World Bank and the World Health Organisation. One excellent step towards the integration of mentally ill and physically handicapped individuals is the adoption of power-driven wheelchairs with high navigational intelligence. Various solutions that enable the enduser to carry out safe movements and complete some crucial everyday chores are being developed.

The idea is to develop an eye monitored system that will enable wheelchair navigation based on eye movement. This invention allows patient to sit in a wheelchair and face a camera directly. By simply staring in that direction, the patient can move in that way. The image processing system in robotic wheelchair is used for the operation.

Description about the Consultancy work:

IOT BASED ELDERLY PEOPLE FALL DETECTION AND ALERT SYSTEM

Human falls are a problem that particularly affects the elderly, causing permanent injuries or even death. Preventing people from falling is a social desire, but it is almost impossible to achieve because total prevention cannot be guaranteed. One possible solution is to detect a fall almost in real time so that help can be provided quickly. This can significantly reduce the severity of long-term health effects. This work proposes a solution based on the Internet of Things installed in people's homes. The proposed non-portable solution is not intrusive and can be used in hospitals, rehabilitation facilities and nursing homes in addition to homes. The solution uses a three-layer computing architecture consisting of edge, fog and cloud.

Description about the Consultancy work:

IOT BASED ECG MONITORING SYSTEM

The development of new technologies has led to significant improvements in the quality of health care, especially in the area of heart health. The Internet of Things (IoT)-enabled electrocardiograms (ECGs) and heart monitoring systems have revolutionized the way heart health is monitored and managed due to their low cost. This work aims to contribute to that change by creating an affordable electrocardiogram (ECG) and heart monitor that runs entirely on Arduino Uno microcontroller. Using Bluetooth communications, the system allows monitoring from a distance of up to 100 meters without an internet connection. There will be a message immediately sent to the user and doctors when the deformation is detected, so that they can analyze the patients and in difficult conditions and provides first aid. the solution provides a reliable and accurate way to monitor heart health, allowing healthcare professionals to detect and diagnose heart-related problems in real time. It has the potential to significantly improve health outcomes, provide an affordable and effective way to monitor heart health.

Description about the Consultancy work:

An Advanced Automated Glucose Bottle Monitoring System

Due to heavy workloads, people forget to do their most important work. If nurses working in hospitals forget to change the glucose trip bottle once a glucose bottle is empty, it will bring bad consequences to the patient. To remind the nurses, we can send an alert message to their phones saying that the glucose bottle is going to be empty, as everyone will continuously use their mobile phones in this modern world. The system consists of an Arduino board (microcontroller) which receives input from the load sensor and it sends output to the GSM module. The alerting phone message may be still more efficient since everyone will use their phone always thus using a GSM module is not so much costlier and it can be easily implemented.

Description about the Consultancy work:

ADAPTIVE EQUIPMENT FOR MUSCULAR DYSTROPHY

It may be difficult for patients with illnesses like muscular dystrophy to move around due to their weakening muscles. Their muscles receive an extra push from the project mechanism to accomplish tasks like wrist bending. Electromyography sensors on the sleeve of this equipment, which covers the hand and arm, sense muscle impulses and anticipate human actions. After that, it signals the wrist support mechanism to activate actuators that facilitate the movement of the muscles. It aids the subject in completing their movement by providing support for their weak muscles.

Description about the Consultancy work:

IOT BASED FOOT HEALTHCARE SYSTEM FOR DIABETIC PATIENTS

Foot pressure distribution analysis is an important factor in the medical field. Diabetics usually have a weaker leg due to high blood sugar levels. This causes injury to small blood capillaries, especially in the legs. The main cause of injury is the narrowing of blood capillaries. An increase in diabetic foot disease is expected in the future. Diabetics face complications like foot ulcers, breakdown of skin tissue in poorly controlled diabetes. In order to avoid permanent damage to the damaged part and speed up the recovery, it is necessary to monitor the regular rehabilitation activities of the patient in the hospital and at home. The proposed system provides hardness level and pressure readings in different parts of the foot. If the signal exceeds the limit, a message is sent to the patient's consulting doctors or physical therapists and their caregivers to avoid a fatal condition. Equipped with a blood flow stimulator, the system stimulates blood flow, helping to accelerate wound healing and prevent wound aggravation. Stimulating blood circulation can dilate blood capillaries, preventing wound healing.

23/1/24.

Description about the Consultancy work:

Patient monitors measure, record, distribute and display combinations of biometric values such as heart rate, SPO2, blood pressure, temperature and more. High-capability, multi-function monitors are typically used in hospitals and clinics to ensure a high level of quality patient care. The electronic PCBA and components don't require frequent maintenance. Typically semi-annual inspection and annual calibration is prudent to ensure the accuracy and reliability of data generated by the medical devices. Peripherals and the sensor however must be regularly checked to ensure that the device is working normally. First we have to make sure that all of its accessories or peripherals are present such as the SPO2 sensor, temperature sensor, BP cuff, ECG cable, and CO2 sensor. Next check the voltages on the test points to check whether the values are within the normal range. Reference voltages are listed on the service manuals of each patient monitor, depending on their brands. For the main sensors of ECG cable, SPO2 sensor, temperature sensor, and CO2 sensor use alcohol wipes to eliminate dirt or oil. Check all the sensors if they are all working or replace it.

Description about the Consultancy work:

PHYSICAL AND CHEMICAL PROPERTIES TESTING OF POLYVINYLCHLORIDE SHEETS

Polyvinyl chloride is a thermoplastics material which consists of PVC resin compounded with varying proportions of stabilisers, lubricants, fillers, pigments, plasticisers and processing aids. Different compounds of these ingredients have been developed to obtain specific groups of properties for different applications. However, the major part of each compound is PVC resin. Flexible or plasticised PVC compounds, with a wide range of properties, can also be produced by the addition of plasticisers. **Physical Properties:**

Property	Value	Conditions and Remarks
Molecular weight	1,40,000	Cf:K57 PVC 70,000
Relative density	1.42 - 1.48	cf: PE 0.95 - 0.96, GRP 1.4 - 2.1, CI 7.2, Clay 1.8 - 2.6
Water absorption	0.0012	23°C, 24 hours
Co efficient of friction	0.4	PVC to PVC cf: PE 0.25, PA 0.3

Chemical Properties:

Property	Value	Conditions and Remarks
Softening point	80 - 84°C	min. 75°C for sheets
Thermal conductivity	0.16 W/(m.K)	0 - 50°C PE 0.4

Description about the Consultancy work:

FEASIBILITY ANALYSIS FOR THE DEVELOPMENT OF INTEGRATED COCONUT INDUSTRY

Coconut is one of the essential commodities. This study aimed to analyze the feasibility of integrated coconut industry and to decide the main coconut product of the industry. The analysis consisted of raw material availability & property, technology aspect and the impact on society and environment. Coconut husk and coconut shell will be processed to be coconut fiber and charcoal. Based on the result analysis of all the aspects, Integrated Coconut Industry is feasible to be established.

Raw Material Property

The proximate analyses of copra (on dry weight basis) revealed that it contained

- Moisture
- Ash
- Crude fat, protein & fiber and
- Carbohydrates

Technology Aspect

Advantage of Electrical dryer over Solar dryer

1. 50% time reduced
2. Quality of Copra is superior
3. Used for other plantation crop
4. Operate & the maintenance cost is low

The impact on Society and environment

1. **Environmental Sustainability:** The use of coconut shells as a raw material for charcoal production reduces the pressure on traditional hardwood forests, helping to preserve valuable ecosystems.

2. **Renewable and Sustainable Energy Sources:** Cleaner Fuel: Coconut charcoal burns more cleanly than traditional charcoal, reducing air pollution and associated health risks. Reduction in Fossil Fuel Use: By providing an alternative to fossil fuels, the industry contributes to a reduction in greenhouse gas emissions.
3. **Economic Development: Job Creation:** The coconut charcoal industry can create jobs in rural and agricultural communities, contributing to poverty reduction and economic stability.
4. **Community Empowerment: Local Investment:** The industry can encourage investment in infrastructure and technology in rural areas, leading to improved living standards.
5. **Carbon Sequestration:** Coconut trees absorb and store carbon dioxide, which helps combat climate change. By using coconut shells for charcoal, the carbon remains locked away, reducing carbon emissions.

Subject: Appreciation for Consultancy Work Completion

This is to inform you that the consultancy work “Feasibility Analysis for the development of Integrated Coconut Industry” carried out by Mr. T. Sathish – Assistant Professor of Chemical Engineering, Nandha Engineering College (Autonomous) was completed on 22.01.2024 and the demo of this work also completed successfully on the same day. In this regard, we will pay Rs 36,000/- as a consultation fee. We appreciate his work for our company at the expected level of work completion.

Best Regards

Mr. P. Shanmugam

Description about the Consultancy work:

Piping Data Extraction from Piping Isometrics and PSV master list consolidation for Ethylbenzene Styrene Monomer and Ethylene Glycol Plants for Flarenet Analysis Network Project

A Pressure Safety Valve, also referred to as a pop-off valve, is a type of Pressure Relieving Device (PRD) that is used to release gases or liquids, and thus relieve pressure, in the case that the pressure in a vessel reaches a pre-determined set point. The purpose of a safety valve is to be the last line of defense in protecting equipment, the environment, and most importantly personnel. Unlike a pressure regulator, a pressure safety valve should be used as a final measure to prevent accidents, rather than consistently maintaining pressure. Because of this, pressure safety valves are heavily regulated and must meet ASME Code requirements.

Because of the importance of a PSV, the valve must be able to operate at any time in any condition. The operation of a pressure safety valve cannot rely on a power source so that it is operable in the case of a power outage. Therefore, all pressure safety valves ultimately rely on the process fluid to open and close the valve.

Flarenet analysis work was carried out for Ethylene Styrene and ethylene glycol plant to list out the PSV locations from piping diagram. To consolidate the PSV's installed in the plant, the data are extracted from master list manual.

7. As per NFPA-20 para 5.14.10 a vortex plate shall be installed at the entrance to the suction pipe. Vortex plate distance above the bottom of tank will be one-half the diameter of the suction pipe with a minimum of 152mm.
8. Deleted.
9. Working capacity of the fire water tank based on the minimum fire water demand of 908 m³/h for a period of 6 hours. Capacity to be verified and amended accordingly by the detailed

Description about the Consultancy work:

AUTO CAD SUPPORT FOR BS150 DEPLETION COMPRESSOR PROJECT

This P&ID consists of instrument air, multiple drinking water line, lube oil sump tank, bulk, storage tanks such as Diesel, firewater tank etc. Here firewater is used for a safety measures in whole gas station. Dehydration unit is to remove water contents in the service fluid stream. Mainly flare stack of high pressure and low pressure which connects from various high pressure and low pressure equipment's and PSV for safety assessment of all equipment's. Corrosion inhibition is to inhibit all the corrosion throughout process and safe guard the equipment's.

All equipment and instruments Tag numbers are prefixed with 150. Isolation indicated on P&ID is indicative only and isolation philosophy as per customers specification. New Tag numbers are tentative to be reconfirmed during detailed engineering.

Instrument Air

1. Instrument Air sub-Headers are sized as follows:

- 1/4" pipe for upto 1 instrument
 - 1/2" pipe for upto 6 instruments
 - 1" pipe for upto 25 instruments
 - 1.5" pipe for upto 50 instruments
 - 2" pipe for upto 100 instruments
2. All instrument air take-off point are located on top of header and valve as required.
 3. Tube and carbon steel pipe of 1" diameter and smaller bent where possible instead of using fittings.
 3. For every 5 instrument air take-off points on a sub-header, an additional take-off are provided and plugged for future plant expansions.
 4. Funnel type connection is provided with removable cover to prevent from the ingress of rain and dust.
 5. Lube oil sump tanks are relocated adjacent to BS150 fence to allow vacuum truck access from outside fence.
 6. Connection for vacuum emptying of vessel from outside fence.

2. Condensate Corrosion Inhibitor Transfer Pump

1. To be provided as per condensate corrosion handling system vendor suppliers requirements.

Engineering contractor.

10. Dip pipe with Antisiphon hole.

11. Minimum from bottom

5. New Gas Dehydration Unit

1. Existing 8" ring man-hole shall be replaced with 12".

2. Contractor shall extend the new water ring man-hole to all the new facilities by carrying out a detailed site survey.

3. Block valves shall be gate valves with post indicator and locking devices.

Description about the Consultancy:

The mix design of M20, M25, M30 & M35 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.38 to 0.45. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement. AS per the IS code recommendation super plasticizer are used as an 1% for the weight of the cement. The main purpose of using plasticizers are to reduce the water content for increasing the harden strength of the concrete at various ages. Also it will reduce the shrinkage cracks are after the 28 hours from the casting of the concrete specimen.

Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

Beginner-friendly microcontrollers are easy to use and program with just a laptop, a USB cable, and some (free) open-source software. Microcontroller programming is just a part of digital system design. To become a good professional, one has to know many other things apart from programming - mathematics, physics and electronics.

A conveyor belt for packing is a system used in various industries to automate the process of packaging products. These conveyor belts are designed to transport items from one point to another within a packing or packaging facility, facilitating the efficient and orderly movement of goods during the packing process. A microcontroller-based conveyor belt system offers flexibility, scalability, and customization options to meet the specific requirements of different industrial applications while providing efficient and reliable material handling capabilities.

Microcontroller based conveyor belt contains Sensors and Input Devices, Motor Control, User Interface, PLCs (Programmable Logic Controllers), SCADA (Supervisory Control and Data Acquisition) systems for integration.

Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

Basic ingredients of construction materials are tested as per the IS Standard such as determines the strength of aggregates used in construction and also evaluates the mechanical properties of steel such as its strength and elasticity. The crushing and abrasion test were carried out to find its mechanical properties of the coarse aggregate. Two brand of cement have been tested namely chettinad and coromantal OPC43 grade of cement in which coromantal OPC 43 grade of cement was used to calculate the quantity of cement required to produce the various grade of concrete such as M20, M25, M30 and M35 grade of concrete. And also Fe500D and Fe550D grade of steel reinforcement had tested to find its yield strength, ultimate strength, unit weight and elongation index of rods for 8mm, 10mm, 12mm, 16mm, 20mm and 25mm.

Description about the Consultancy:

Needle: It is a principle element of the knitting machine. Its help the yarn to create a loop and by this way fabric are produce. Prior to yarn feeding the needle is raised to clear the old loop from the hook and received the new loop above it on needle stem. The new loop is then enclosed in the needle hook as the needle starts to descend. If the needle breaks, a hole will be created in the garment. To avoid this camera is fixed near all the needles which intimates the breakage of needles so that loss can be avoided.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

Home automation is the automatic control of electronic devices in your home. These devices are connected to the Internet, which allows them to be controlled remotely. With home automation, devices can trigger one another so you don't have to control them manually via an app or voice assistant. For example, you can put your lights on schedules so that they turn off when you normally go to sleep, or you can have your thermostat turn the A/C up about an hour before you return to work so you don't have to return to a stuffy house. Home automation makes life more convenient and can even save you money on heating, cooling and electricity bills. Home automation can also lead to greater safety with Internet of Things devices like security cameras and systems.

Home automation works via a network of devices that are connected to the Internet through different communication protocols, i.e Wi-Fi, Bluetooth, ZigBee, and others. Through electronic interfaces, the devices can be managed remotely through controllers, either a voice assistant like Alexa or Google Assistant or an app.

Description about the Consultancy:

The CCTV Camera Surveillance System: CCTV stands for closed-circuit television and is commonly known as video surveillance. "Closed-circuit" means broadcasts are usually transmitted to a limited (closed) number of monitors, unlike "regular" TV, which is broadcast to the public at large. CCTV networks are commonly used to detect and deter criminal activities, and record traffic infractions, but they have other uses. CCTV (closed-circuit television) is a TV system in which signals are not publicly distributed but are monitored, primarily for surveillance and security purposes.

CCTV Cameras work by capturing a constant sequence of images that are then transmitted by cable or wirelessly to a display monitor where the sequence of images is demonstrated as video footage. A CCTV system therefore refers to all aspects and components that make up the system, such as the camera, wiring, video footage storage (via the cloud or digital video recorder), monitors, access control and general system management. You would want to use a CCTV system to increase the security of your business premises and have surveillance on key areas at any one time. This would be particularly useful for large premises or one that holds valuable equipment, products or information. As well as recording video footage, a CCTV system can also notify you if there is activity or movement on a certain camera at a set time. For instance, in the dead of night whilst the business premises in closed and employees have gone home. This notification could indicate that someone may be about or looking to break-in to your site.

Although a CCTV system can be used for the surveillance of on-site activity, during and out of working hours, it can also be used to help identify wanted criminals, as well as act as a deterrent to potential intruders. Consisting of at least one camera, lens, monitor and recorder, a CCTV system can be scaled up or down depending on the size of area wanting surveillance. CCTV works by the camera or cameras taking a constant sequence of images that are then transmitted by cable or wirelessly (depending on the chosen system type) to the recording device and then on to the display monitor, which enables an individual to see the sequence of images as video footage.

Description about the Consultancy:

Office Automation refers to the use of technology to streamline and automate various tasks and processes within an office environment. This includes the use of software, hardware, and other tools to enhance efficiency and productivity. This automation includes email systems, document management software, workflow automation, and scheduling applications in Sun Cargo Movers. The goal is to reduce manual effort, minimize errors, and improve overall organizational effectiveness in day-to-day operations.

Efficient office automation streamlines processes and generates better overall results. Time savings also means cost savings as employees can devote their time to higher value and more demanding tasks.

Dear Dr.K.Parthiban & Team,

I am writing to express my sincere gratitude for the outstanding consultancy services your team provided during the recent Innovation Day 2024. Your expertise and dedication played a crucial role in the successful completion of the Event, and we are truly appreciative of the valuable contributions made by each member of your team.

Throughout the duration of the Event, your professionals demonstrated a high level of skill, commitment, and professionalism.

We were particularly impressed with the Marketing Strategy, Sales Promotion and Brand Building activities exhibited by your team.

We believe that the success of this Event is a testament to the quality of your service, and we look forward to the possibility of working together on future endeavors. Please convey our appreciation to all your team members **Mr.L.Jothibasul,AP/MBA**, **Mr.J.Tamilarasu,AP/MBA** & **Ms.K.Akila,AP/MBA** involved in this event.

Once again, thank you for your hard work, dedication, and exceptional service. We value our partnership with MBA Department of Nandha Engineering College and look forward to future collaborations.

Description about the Consultancy:

The digital marketing project aimed to boost the client's company growth through strategic online initiatives. Comprehensive market research guided content creation, SEO optimization, and targeted PPC campaigns. Social media efforts fostered engagement and brand loyalty, while email marketing nurtured leads effectively. Within six months, website traffic surged by 85%, with key pages ranking higher on Google. Lead generation saw a significant 10% increase through PPC campaigns. Social media channels experienced a 5% growth in followers and interactions, while email open rates and conversions rose by 2%. The project's success highlights the effectiveness of a data-driven approach in driving tangible business growth.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description of the Consultancy:

Electrical Safety Audit: The work involves a comprehensive evaluation of the electrical infrastructure within a garments manufacturing facility intending to enhance safety and operational efficiency. The first phase entails a thorough assessment of the existing electrical systems, including wiring, distribution panels, and power sources. This involves identifying potential safety hazards such as overloaded circuits, exposed wiring, or faulty equipment that could pose risks to personnel or disrupt production processes. Following this, a detailed analysis of electrical safety standards and regulations is conducted to ensure compliance with relevant guidelines. In addition to safety considerations, work focused on optimizing the electrical infrastructure to improve efficiency and reduce energy consumption

Photo Proof:

Review of electrical infrastructure, including wiring, distribution panels

Identification of areas for energy conservation and optimization

Verification of compliance with relevant electrical safety standards and regulations

Assessment of grounding systems and protection against electrical shocks.

Description about the Consultancy:

The Online Furniture Shop Management system is a comprehensive solution designed to streamline and enhance the operations of a furniture retail business in the digital landscape. This innovative platform integrates various functionalities to provide a seamless online shopping experience for customers while optimizing the management of inventory, orders, and overall business processes. The online furniture shop management system comprises three primary modules: User, Admin, and Registered Users. For users, the system facilitates seamless browsing of products, account registration, login, and a streamlined checkout process. The Admin module includes the addition and management of furniture brands, categories, subcategories, and individual products. It categorizes orders into New, Confirmed, On the Way, Delivered, Cancelled, and an aggregated view of All Orders. The reporting functionality within the Admin module allows for the generation of reports between specified dates and comprehensive sales reports. Additionally, the system maintains a list of Registered Users, offering insights into the user base. This modular structure ensures efficient control over the online furniture shop, from product management to order processing and user engagement.

Description about the Consultancy:

The "Drivers Cab" consultancy work focuses on crafting a user-friendly cab booking website. This platform enables easy user registration, real-time bookings, secured payments, and a review system. Its goal is to simplify cab reservations for users while offering drivers expanded opportunities. By providing reliability and convenience, this project seeks to establish a seamless and efficient platform, benefiting both customers and drivers in the transportation industry. The advent of technology has revolutionized the transportation industry, particularly in the context of cab services. The developed system aims to enhance the efficiency and convenience of cab reservations by providing a user-friendly platform for both drivers and passengers. As we embark on this journey of redefining transportation, our Online Cab Reservation Website aspires to become the preferred choice for individuals seeking a reliable, efficient, and user-centric cab service.

Description about the Consultancy:

The Photo Studio CRM System optimizes customer experience in photography businesses by integrating modules for client management, bookings and image delivery. The primary objective is to improve workflow, increase client satisfaction and ultimately boost business productivity. With a user-friendly interface, it centralizes bookings, sends automated reminders and enhances transparency in image management. Financial modules ease invoicing, payment tracking and expense management. The system prioritizes client communication, offering messaging features and feedback mechanisms. Analyzing customer data, it enables personalized offers. Security is ensured through encryption and access controls. Scalable and adaptable, the CRM system receives regular updates for long-term effectiveness, providing a holistic solution for photographers to boost efficiency and client satisfaction. Access controls restrict information to authorized personnel, ensuring confidentiality and compliance with data protection regulations. The CRM system is scalable and adaptable, accommodating the evolving needs of a photo studio. Regular updates and support services contribute to its longevity and effectiveness. This Photo Studio CRM System represents a holistic solution for photographers, enhancing organizational efficiency, client satisfaction, and overall business success. Client communication is a key focus, with built-in messaging features and feedback mechanisms. This ensures continuous engagement, allowing photographers to understand client preferences and tailor their services accordingly.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The consultancy work entitled as "Online Appointment System for Hospital" is a web-based application for on-line appointment booking in P. K. Dental Care hospital. It maintains records of patient details, doctor details and appointment details. The patient has to register himself before logging in to the application. After logging in, the patient can view the Doctor details. The patient can request for an appointment on his/her preferred day/time. The admin module can add doctor, view patient's details and doctor's details and can view appointments also. The doctors also are given the access of updating their personal profiles. Apart from that, the system also facilitates the generation of a report of the patient's history which will be generated by the admin, so that the doctor can view the patient's history without any delay. Thus, the time taken to treat a patient will be reduced and efficient, accurate and improved service could be provided to the patients. The system aims to help the patients to take appointment online through internet and track their records through it.

Description about the Consultancy:

In today's dynamic financial landscape, the necessity for a seamless and secure Payment processing system has become increasingly paramount. This consultancy work proposes a robust payment processing system designed to enhance the efficiency and reliability of transactions within e-commerce platforms. The system addresses key functionalities such as product posting, viewing, purchasing, and the seamless execution of transaction processes. The system's core functionality revolves around enabling sellers to effortlessly post their products on the platform. This process involves a user-friendly interface that allows sellers to input essential product information, including descriptions, pricing, and images. The additional features may include categorization options, product variations and promotional tools to optimize product visibility. For consumers, the system provides an intuitive interface to effortlessly browse and view products, search functionalities, filters and sorting options are integrated to facilitate a smooth user experience. Additionally, users can access detailed product information, reviews, and ratings to make informed purchasing decisions.

Cheque issue details:
cheque no: 126600
amount: 8000/-
date: 18.03.2024

Description about the Consultancy:

A Boutique shopping system that permits a user to submit online orders for items and/or services from a store that serves both walk-in users and online users. The boutique shopping system presents an online display of an order cut off time and an associated delivery window for items selected by the user. The system accepts the user's submission of a purchase order for the item in response to a time of submission being before the order cut off time. The boutique shopping system does not settle with a credit supplier of the user until the item selected by the user is picked from inventory but before it is delivered. Therefore, the user can go online and make changes to the order. In addition, available service windows are presented to the user as a function of user selected order and service types and further, the order picking is assigned in accordance with a picker's preference. When ordering goods, many shopping systems provide a virtual shopping cart for holding items selected for purchase. Successive items selected for purchase are placed into the virtual shopping cart until a user completes their shopping trip. Virtual shopping carts may be examined at any time, and their contents can be edited or deleted at the option of the user. Once the user decides to submit a purchase order, the user may print the contents of the virtual shopping basket in order to obtain a hard copy record of the transaction.

Description about the Consultancy:

The "Energizing Retail Efficiency for Shop Management" consultancy work aims to revolutionize the way electrical shops manage their operations, with a primary focus on stock maintenance, billing processes, and product sales. The application provides a robust Stock Management module that provide real-time visibility into inventory levels. This feature automates stock tracking, minimizing the chances of stockouts or overstock situations, thus enabling businesses to maintain optimal inventory levels and reduce losses due to discrepancies. Billing and Invoicing are streamlined through an intuitive interface that ensures quick and accurate transaction processing. The system supports various payment methods, including cash, cards, and digital wallets, accommodating diverse customer preferences. Automated invoicing enhances financial management and reduces the errors associated with manual billing processes. Through an intuitive dashboard, businesses can effectively showcase products, highlight promotions and manage new arrivals. This not only attracts customers but also facilitates strategic product placement, leading to increased sales and improved customer satisfaction. Security measures are paramount in the project, which employs robust encryption protocols to safeguard sensitive information, including customer data and transaction details. Regular updates and maintenance routines further, ensure the integrity of the system, providing retailers with a reliable and secure platform for their day-to-day operations.

Description about the Consultancy:

The Dream Hall Reservation consultancy work for Sri Vaigai Event Planners is web application used for hall bookings by seamlessly integrating catering, photography and decorations into a single, cohesive platform. Its primary objective is to provide customers with a streamlined and accessible solution for finding and booking event spaces. Customers can effortlessly locate and reserve their preferred venue, receiving instant confirmations, thereby instilling confidence in the security of their chosen space for the event. Simultaneously, venue owners benefit from the application easy-to-use tools, empowering them to efficiently manage and organize bookings, contributing to a more effective event hosting process.

Customers are prompted to share their experiences through reviews and ratings, fostering a community-driven approach to event planning. The application aspires to create a seamless and enjoyable platform for hall reservations, catering, photography, and decorations, redefining the landscape of event management.

Description about the Consultancy:

The web application Tile & Tap Haven is used to streamline the operations and enhance user experience. The User Module handles user-related functions, including registration and profile management, while the Admin Module empowers administrators to oversee system settings and manage user activities. The Category Module facilitates the organization of products, allowing the addition and viewing of categories like "shower" and "tiles". The Subcategory Module offers a more detailed classification of the system. The Product Module enables the addition and viewing of products, essential for showcasing the ceramic offerings. In the UserModule user can place the orders according to their wish, administrators can efficiently manage user data also. Finally, the system incorporates a robust Report Module, empowering stakeholders to generate and analyze reports, providing insights into sales, user behavior and inventory. This modular structure ensures a comprehensive and efficient platform for AMBIKA ENTERPRISES to manage their shower and tiles product line.

Description about the Consultancy:

The "Book-a-Smile" project envisions a revolutionary shift in the conventional method of scheduling dental appointments by proposing the development of an innovative web application.. The primary objective is to empower individuals to effortlessly schedule appointments online, eliminating the hassles associated with traditional appointment booking. Through real-time availability updates, the platform aims to enhance the overall patient experience, ensuring that users can access dental care services with utmost convenience.

A crucial aspect of the "Book-a-Smile" application is its commitment to integrating seamlessly with existing clinic workflows. This feature not only facilitates efficient appointment management for dental professionals but also ensures a smooth and coordinated experience for patients. Additionally, the platform prioritizes the management of patient information, emphasizing the importance of data accuracy and security in the healthcare domain. By incorporating automated reminders, the application aims to reduce the likelihood of missed appointments, contributing to better patient compliance and overall satisfaction.

Description about the Consultancy:

The FinTrack Billing System is a dynamic web application designed to revolutionize the management of a phone retail business. The users can explore available phone stock. The admin can create, print invoices and efficiently track the shop's overall income and expenditure. The system generates invoices, maintains a product inventory and records customer details for future reference. It enhances efficiency and provides a user-friendly interface for both customers and store administrators. The system prioritizes customer management, securely storing customer details for personalized service and future reference.

With insightful reporting and analytics, administrators can gain valuable insights into sales trends and financial performance. Security measures, such as encryption protocols and user authentication, ensure the protection of sensitive data. Designed with scalability in mind, FinTrack adapts effortlessly to changes in inventory size and additional features, accommodating business growth. Integration possibilities with other tools, such as accounting software, enhance overall operational efficiency. Rigorous testing processes guarantee a reliable and stable system, setting The primary goal is to enhance operational efficiency, streamline financial control, and provide an intuitive platform for effective management in the competitive mobile phone retail market.

Description about the Consultancy:

The application "Glow Getter – Appointment Scheduler" is a Salon Appointment Scheduling System which is a software application that aims to streamline and enhance the salon appointment scheduling process by leveraging modern technologies. The main purpose of this application is to manage the customer appointments through the salon website. In this system, customers can schedule their appointment with the beautician through the website.

One of the primary features of this system is real-time availability checks, providing clients with instant access to the available slots, thereby eliminating the frustrations associated with conflicting schedules. Through an intuitive online platform, clients can effortlessly select preferred time slots, ensuring a seamless and efficient booking experience. For salon owners and managers, the system provides a centralized dashboard for holistic appointment management.

Description about the Consultancy:

The cuisine connect is a digital platform designed for easy and efficient food ordering from various restaurants. Users can access the system through web browsers or mobile devices, providing a user friendly interface for browsing menus and placing orders. Online Food Ordering system collaborates with a diverse range of restaurants, offering a variety of food items to cater to different preferences. Key features include secure ordering and payment options real time order tracking customization for individual preferences and an optimized delivery process. The system prioritizes security through robust encryption, ensuring the safety of user data during online transactions. Real time order tracking keeps customers informed about the status of their orders and customization options allow for personalized meal selections. The platform encourages user feedback through a rating and review system, promoting transparency and reliability in the community. In summary, the online cuisine connect aims to enhance the food delivery experience by providing a user friendly platform with diverse restaurants options, secure transactions, real time tracking, customization features and an optimized delivery process.

Description about the Consultancy:

This software offers an intuitive and streamlined sales processing system. It provides an interface that simplifies the creation of invoices, transaction management, and the swift generation of receipts. This functionality not only enhances the shopping experience for customers but also optimizes internal processes, facilitating a seamless transactional flow. In the proposed system, we developed the billing software presents a transformative shift in shop operations.. With the software, the process of generating bill receipts becomes automated, eliminating the need for manual writing. Transactions are processed swiftly through an intuitive interface, reducing errors and expediting the checkout process. This efficiency not only minimizes queues but also enhances the overall customer experience, leading to higher satisfaction. the software's customer relationship management features empower the shop to establish and nurture meaningful connections with customers. Detailed customer profiles allow for personalized interactions, efficient tracking of purchase history, and effective management of loyalty programs. This personalized approach enhances customer satisfaction and loyalty, encouraging repeat business.

Description about the Consultancy:

"Smart Store Solutions" is a web application for both the store owners and the people who have to shop online. Over the last two decades, the Indian e-commerce sector has witnessed rapid growth. Increasing internet availability and mobile phone penetration are the two main drivers of this growth. Also, growing acceptability of online payments and favorable demographics has changed the way companies communicate, interact and do business with customers.. Groceries have been traditionally bought in stores, where consumers have an opportunity to touch and inspect products before the purchase and also control the transportation of fragile products. E-grocery retailing is still at the infancy stage and the volume of internet groceries buying leaves much to be desired for grocers in India to sustain profitable growth in the long run. The thought of purchasing perishable products including fish over the internet provokes some uncertainty among most customers as the reliability and accountability of the service comes into question. Smart Store Solutions stands out as a pivotal player, leveraging the widespread internet access and increasing mobile phone usage. The platform aligns with the changing dynamics of consumer behavior, acknowledging the growing acceptance of online payments and the shifting demographics that impact how businesses engage with their customer base.

Description about the Consultancy:

This consultancy work introduces an innovative solution for departmental stores by integrating a sophisticated Point-of-Sale (POS) system with comprehensive Inventory Management capabilities. The system aims to streamline and optimize the retail operations of departmental stores, enhancing overall efficiency and providing a seamless customer experience. The Inventory Management module is seamlessly integrated with the POS system to provide a centralized platform for monitoring and controlling stock levels. Through real-time inventory tracking, automatic updates are made as sales occur, minimizing the risk of stockouts or overstock situations.

The system employs advanced analytics to generate insights into product trends, allowing store managers to make informed decisions regarding stock replenishment, pricing, and promotions. The charging the executives module produces solicitations for clients in light of their orders, processes installments, and tracks the business's monetary status.

Description about the Consultancy:

A Textile Automation System is a software application that aids businesses in managing their inventory, customer relationships and billing system. It normally incorporates a few modules like stock administration, purchase and sales of items in the concern. Businesses can manage employee information, such as their personal information, work type, and position within the organization, with the help of the employee management module. Product stock levels are monitored, inventory is updated, and alerts are sent out by the stock management module when stock levels fall below a certain threshold. The transaction module deals with processing of their orders and tracks the business's monetary status. In order to provide insights into sales, inventory levels, and other key performance indicators, the reporting and analytics module generates reports and dashboards. Businesses can improve their overall efficiency and productivity by combining these modules into a single system. They can also provide a better customer experience and keep accurate financial records. Businesses can manage their employees, stock, billing, and relationships with customers from a single location with the help of the system.

Description about the Consultancy:

This consultancy work titled as website creation and maintenance is a website that allows users to check the various seat covers available in the Nandhini Seat Cover. Seat Cover's provides a list of Seat Cover products displayed online in various models and designs.

Users may browse these products through online as per categories like Bike Seat Covers, Tank Covers, School Bags etc. If the user likes a product, they may add it into their shopping cart. So we created this system for the convenience of the consumers of this specific shop. Not only for the customer but also for the owner's convenient for it's easier selling of the seat product, saves it's time and effort in inventory for the availability of their seat products.

Description about the Consultancy:

A pharmacy stock management system streamlines inventory, sales, and purchase tasks. It includes features like:

Inventory Management: Tracks products, updates details, and manages stock levels.

Stock Tracking and Alerts: Monitors stock in real-time and alerts for low levels to prevent stockouts.

Supplier Management: Manages supplier info, purchase orders, and delivery schedules.

Reporting and Analytics: Provides insights into sales trends, inventory turnover, and cost-saving opportunities.

User-Friendly Interface: Ensures easy navigation and task efficiency for pharmacy staff.

Overall, it enhances efficiency, optimizes inventory levels, and improves patient care.

Description about the Consultancy:

Jigs and fixtures are special purpose tool which are used to facilitate production (machining, assembling and inspection operations), when work piece is based on the concept of interchangeability according to which every part will be produced within an established tolerance. A jig is a device which holds and positions the work; locate or guides the cutting tool relative to the work piece and usually not fixed to the m/c table. It is usually lightly in construction. A fixture is a work holding device and position the work; but doesn't guide locate or position the cutting tool the setting of the tool is done by machine adjustment and a setting blocker using slip gauges.

Description about the Consultancy:

The design and fabrication of a bolt-together radius conveyor involve creating modular components that can be easily assembled on-site. This approach facilitates transportation and installation, particularly in areas with space constraints. Each section of the conveyor is fabricated with precision-cut bolt hole patterns, allowing for straightforward alignment and attachment during assembly. This method streamlines the construction process, reducing both time and labor costs. Additionally, the bolt-together design offers flexibility for future modifications or expansions. During assembly, sections are securely bolted together, forming the desired curved shape of the conveyor. This bolt-together design not only simplifies construction but also enables future modifications or extensions with minimal effort. By utilizing standardized components and efficient assembly techniques, the bolt-together radius conveyor ensures seamless integration into various industrial settings with minimal disruption.

Radius conveyors play a crucial role in garment manufacturing and distribution by facilitating the movement of garments through various stages of production and logistics. Some specific applications of radius conveyors in the garment industry include: Production Line Handling, Sorting and Inspection, Distribution Centers, E-commerce Order Fulfillment, Retail Store Operations, Garment Bagging and Packaging. They enable the smooth transfer of garments along curved paths to packaging stations, improving efficiency in the packaging process. Overall, radius conveyors play a critical role in optimizing garment manufacturing, distribution, and retail operations by facilitating the efficient handling and movement of garments along curved paths throughout the supply chain.

Description about the Consultancy:

Mold design optimization of pump impeller

Utilize SolidWorks to create a 3D model of the pump impeller mold. Start by sketching the basic shape of the mold cavity and then use features like extrusions, revolves, and sweeps to create the detailed geometry. Incorporate features such as cores, cavities, runners, gates, and cooling channels into the mold design. These features are crucial for the proper formation of the impeller during the molding process and for efficient heat dissipation during production. Conduct draft analysis to ensure that the mold design allows for easy ejection of the impeller from the mold cavity. Proper draft angles are essential to prevent the impeller from getting stuck in the mold. Define the parting line where the mold splits into two halves. Ensure that the parting line is strategically placed to minimize parting line flash and facilitate easy assembly and disassembly of the mold. Design the mold base that provides the foundation for mounting the mold components. Consider factors such as standard mold base sizes, alignment features, and provision for ejector pins and guide pillars. Assemble all the mold components including the mold base, cores, cavities, sliders, ejector pins, and cooling channels. Ensure proper alignment and clearance between components to avoid interference during operation. Perform mold flow analysis and cooling analysis using SolidWorks Simulation or other simulation software to optimize the mold design for manufacturing efficiency and part quality. Identify potential issues such as air traps, weld lines and cooling imbalances and make necessary adjustments to the design.

Respected Sir,

Sub: Work Completion Report for Consultancy Work- Reg.

The Consultancy work entitled "Mix Design" for Mr.J.Balaji, Railway Contractor has been completed on 14/03/2024. In this regard the consultancy fee of Rs. 20,000/- was collected from the company. Now I request you to give permission to credit this amount in our research account and sanction the 80% of consultancy amount as remuneration.

Amount: Rs.20,000/- In Word "Twenty Thousand Only."

Online Transaction : 1).UPI ID:445351066320 Rs.20,000/-

Thanking You,

Yours truly,

K.L. Ravisankar
27/3/24

The Cheque for Rs 16,000 may be given in the name of K.L. Ravisankar as 80% of faculty remuneration under consultancy work.

Consultancy Completion Report
Department of R&D
Nandha Engineering College(Autonomous), Erode-52

Description about the Consultancy:

The mix design of M25 & M30 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.38 & 0.49. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement. AS per the IS code recommendation super plasticizer are used as an 1% for the weight of the cement. The main purpose of using plasticizers are to reduce the water content for increasing the harden strength of the concrete at various ages. Also it will reduce the shrinkage cracks are after the 28 hours from the casting of the concrete specimen.

Description about the Consultancy:

A) STRUCTURE OF AVG:

1. Switches
2. Microcontroller (PIC-16F676)
3. Ultrasonic (receives and transmits signals)
4. Motor driver interconnected with relay (ULN2003)
5. Speed controller board(IC-7805 with IC-555)
6. LED'S
7. Speed controller (DC)
8. Transformer
9. Bridge Rectifier
10. Ultrasonic Module
11. Wiper Motor
12. Battery

WORKING OF AVG

The Automated Tracked Vehicle can be moved both forward as well as backward direction. The viper motor is used for moving the vehicle from one place to another.

They are provided with sensor called Ultrasonic sensors where it is provided in both front and back of the vehicle. This sensor is precisely used for finding the obstacles. When an obstacle is placed in front of the vehicle it automatically stops the rotation of motor, so that the vehicle will stop suddenly. When is removed from that place it automatically starts the rotation of the motor, so that the vehicle moves in the same path or direction.

There are two trigger switch are placed in front and back of the vehicle. The function of trigger switch in the vehicle is to changing the rotation of the motor from clockwise to counter clockwise and vice versa. Thus the vehicle moves from one station to another station by this process and there is some delay is provided for the vehicle depending upon the application we are using it.

Thus the speed of the vehicle can be changed with a speed controller is provided. It can be varied from minimum speed to maximum speed depending upon the application and usage.

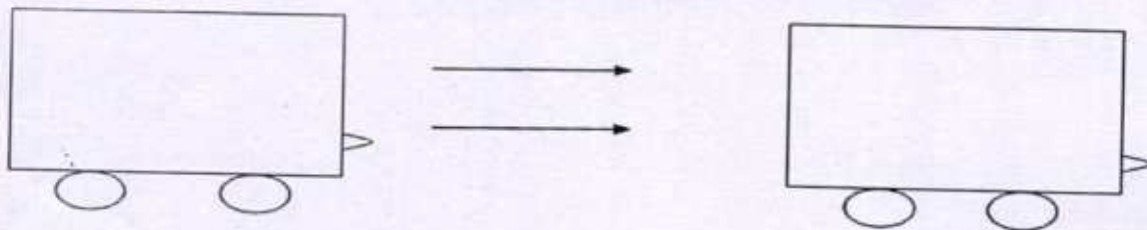

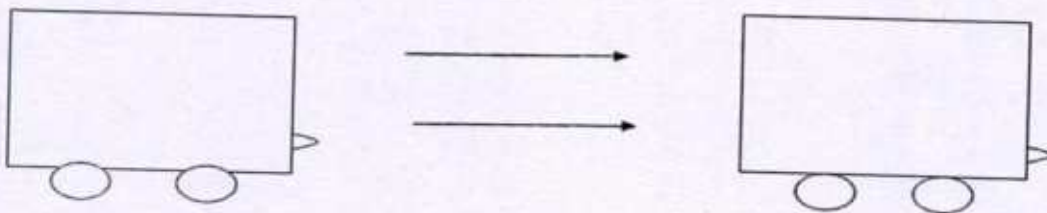

Diagram while the vehicle is moving in forward direction

AN OBSTACLE IS PLACED IN FRONT OF THE VEHICLE

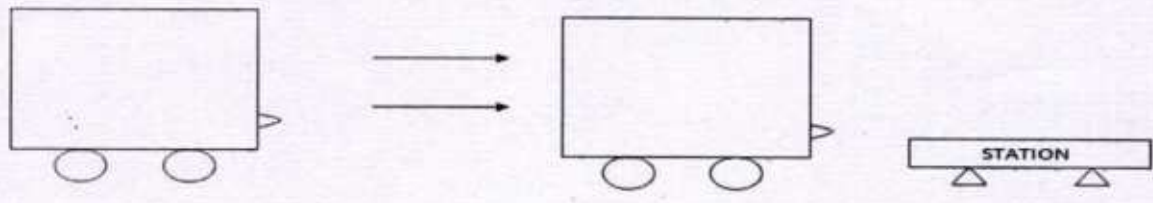

When an obstacles is placed in front of the vehicle. The ultrasonic sensor in front of the vehicle will sends the information to the microcontroller an obstacle is detected. Thus the microcontroller will immediately stop the supply of the motor. So that the vehicle gets stopped in spiting of damaging from it.

WHEN THE OBSTACLE IS REMOVED

When the obstacles is removed in front of the vehicle .The ultrasonic sensor will sends the information to the microcontroller that there are no obstacles are placed in front of the vehicle. So that the microcontroller will starts the motor immediately. Unless the vehicle is placed in front of it, the motion of the vehicle is in the same direction before the vehicle sees the obstacles.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

ON REACHING THE STATION

When the vehicle is reached the station, the trigger switch placed at the bottom of the vehicle is pressed. So that it feed the information to the microcontroller that it has reached the station. After reaching the station the vehicle tends to stop and then delay for few minutes depending upon usage. After that the vehicle tends to move in opposite direction and the process is repeated continuously.

Description about the Consultancy work:

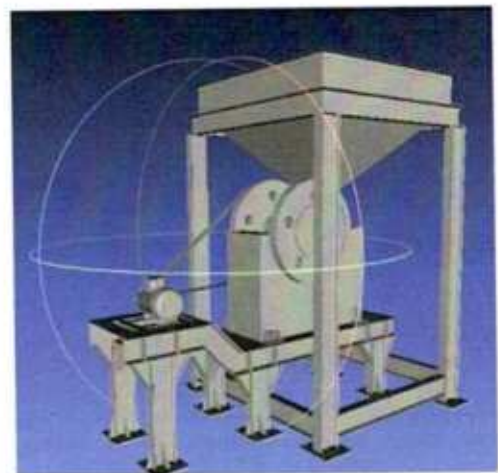

This report outlines the design of a cost-effective jaw-type stone crushing machine tailored to fulfill the requirements of A.N.S Mines & Minerals. The machine is engineered to efficiently and effectively crush stones of varying sizes. The primary goal of this project was to devise a machine capable of proficiently crushing stones. The design process encompassed a literature review, field survey, establishment of design specifications (as listed below), and the development of a CAD model.

Specification		
Dimensions (L x W x H)	mm	1300 x 670 x 1360
Power	kw	4
Voltage / Frequency	v / Hz	380 / 50
Max. Feeding Size	mm	120 x 180
Output Size	mm	0-3 x 0-3
Output per Hour	Ton/H	2
Net Weight	kg	450
Gross Weight	kg	550

The design process entailed conceptualization, detailed design, and modeling. Numerous design iterations were explored to enhance the machine's performance. The proposed design is versatile and can be utilized for crushing recycled waste stones, as well as in diverse industries like road and railway construction, building construction, water conservation, chemical industry, etc. Moreover, the machine is adept at crushing a wide range of materials including pebble, calcite, granite, quartz, concrete, dolomite, bluestone, iron ore, limestone, coal gangue, construction waste, ferrosilicon, basalt, sandstone, rocks, ore, glass, cement clinker, and certain metals.

The machine is engineered to efficiently and effectively transport the materials like fly ash, stone and processed bricks. The primary goal of this project was to devise a machine capable of proficiently handling the materials and inventory in the company. The design process encompassed a literature review, field survey, establishment of design specifications, and the development of a CAD model. The system aims to optimize the movement, storage, and distribution of materials across the construction site.

Specification		
Dimensions (L x W)	mm	9800 x 990
Power	kw	4
Material handled per Hour	Ton/Hr	0.5
Net Weight	kg	600
Gross Weight	kg	800

The design process entailed conceptualization, detailed design, and modeling. Numerous design iterations were explored to enhance the machine's performance. A well-designed material handling system is essential for optimizing construction site operations. By implementing efficient layouts, appropriate equipment, and robust safety measures, the construction company can improve productivity, reduce costs, and enhance overall project success. The proposed design is versatile and can be utilized for handling materials in diverse industries like road and railway construction, building construction, water conservation, chemical industry, etc.

Respected Sir,

Sub: Work Completion Report for Consultancy Work- Reg.

The Consultancy work entitled "6P6C Common testing box construction and service 7 No.'s" for Data Field India, Coimbatore, has been completed on 08/02/2024. In this regard the consultancy fee of Rs.3600.00 was collected from the company and it is transferred to college account through online Money transfer. Now I request you to kindly sanction the 80% of consultancy amount as remuneration to the faculty member as soon as possible.

Total Amount in Rs.3600/- In Words Three Thousand and Six Hundred Rupees Only.

Thanking You,

Yours truly,

G. Prabhakaran
15/4/2024

The Cheque for Rs.2880/- may be given in the name of **Mr G.Prabaharan** as 80% of faculty remuneration under consultancy work.

Description about the Consultancy:

The AC 18 Testing box and 6P6C Common testing module is the device to test the Mobile charger cable functioning in the following three criteria:

1. Open Circuit
2. Short Circuit between two or more cables
3. Wrong terminal in the end connectors

Technically the circuitry is made up of ATMEGA168 microcontroller and eight digital Input/output pins are acted as input and eight digital Input/output pins acted as outputs. This module working with 5VDC/500mA and it consist of one female micro USB connectors and its corresponding terminals. The charger cable consists of six different wires and the ends are crimped with male micro USB connector. The module is designed to work will all temperature conditions and the microcontroller chip is molded with glue to avoid the malfunction due to humidity. Four different output indications are given to show Pass/Open/Short/Wrong Connection. In this consultancy work the above said two modules are serviced by reprogramming the Controller and replacing the regulators to make correct function of the module.

Description about the Consultancy:

A fuel cell is an electrochemical cell that converts the chemical energy of a fuel (often hydrogen) and an oxidizing agent (often oxygen) into electricity through a pair of redox reactions. The fuel cell performance is affected with several parameters like design factors, operating factors and materials. In this work, the fuel cell having new serpentine flow channel design has been fabricated and analyzed in different operating temperatures and different operating pressures to study its effects on the power output. From the experimental analysis, the best operating conditions of the PEM fuel cell was found.

Description about the Consultancy:

The mix design of M25 & M30 grade was prepared as per the IS 10262:2019 to find the proportion of cement, fine aggregate, coarse aggregate and water. The water cement ratio of the mix is used from 0.50 & 0.46. The incidents are mixed in the laboratory as per the ration obtained during the calculation and the same has been used to prepare the sample cube specimen to find the harden properties. The results show that mix ratios attain the required strength as per the client requirement. AS per the IS code recommendation super plasticizer are used as an 1% for the weight of the cement. The main purpose of using plasticizers are to reduce the water content for increasing the harden strength of the concrete at various ages. Also it will reduce the shrinkage cracks are after the 28 hours from the casting of the concrete specimen.

Consultancy Completion Report
Department of R&D
Nandha Engineering College (Autonomous), Erode-52

Description about the Consultancy:

Our consultancy services have facilitated the publication of 16 patents in collaboration with faculty and students from Nandha Engineering College's Electronics and Communication Engineering (ECE) and Biomedical Engineering (BME) departments. These patents showcase innovative solutions developed through our partnership with inventors. Our approach emphasizes practical application and mentorship, empowering students to apply academic knowledge to real-world innovations. Faculty members have played a crucial role in guiding these projects to address key challenges in ECE and BME. Each patent underscores our commitment to fostering creativity and advancing technology, particularly in electronic communication systems and biomedical engineering.

(63) Abstract: IoT BASED SMART WATER QUALITY MONITORING SYSTEM ABSTRACT Water pollution has become a major concern in recent times due to the contamination and pollution of drinking water. The ecosystem's life cycle may be impacted by the diseases that contaminated water might spread to people and animals. Early detection of water contamination allows for the implementation of appropriate controls and the avoidance of dangerous circumstances. Real-time monitoring of the water's quality is necessary to ensure a supply of pure water. As sensors, communication, and the Internet of Things (IoT) continue to advance, smart solutions for monitoring water contamination are becoming more and more important. This study provides a thorough analysis of the most recent initiatives in the field of smart water pollution.	4) G.
