

The objective of a project lab is to provide a conducive environment for creativity, collaboration, and innovation across different disciplines. Students have the chance to work hands-on in a cutting-edge setting in the Project Laboratory, where they may develop the creative and technical abilities necessary for careers in Electronics and Communication Engineering. The Project Laboratory serves as a vital hub for experiential learning, a location where students generate original ideas and carry out their capstone projects. Project Laboratory's primary goal is to give students a space to work on their final year major projects and project-based learning (PBL) courses.
